B-26

—NEW MARTIN BOMBER

powered by DOUBLE WASPS

The finest airplanes in the world are being made right now in America, where engine performance reaches its peak. Among the new bombers for the U. S. Army an outstanding type is the fast Martin B-26, powered by two Double Wasps — Pratt & Whitney's latest and most powerful engine.

PIPER POINTS THE WAY

WITH THE NEW PIPER COUPE... THE PRIVATE PLANE FOR YOU!

COMPLETE.. Even to Starter, Built-in Radio and Generator

Piper leadership scores again! You'll recognize the new Piper Coupe as being miles ahead of competitive planes at comparative prices. You'll enjoy the superior performance of the Coupe's 75-horsepower dual-ignition engine, the convenience of an engine starter and built-in radio. Never before has standard equipment on a light plane included so many features for safe, comfortable flying . . . exhaust muffler, custom-built clock, navigation lights and battery, hydraulic brakes, parking brake . . . to mention but a few. Visit your Piper Dealer for a free flight demonstration. See what a *complete* plane Piper offers you for private ownership. Priced at $2395, completely equipped, F.A.F. Lock Haven, Pa. . . . only $799 down payment.

★ 75-HORSEPOWER ENGINE
★ ENGINE STARTER IN COCKPIT
★ RADIO CUSTOM-BUILT BY RCA
★ WING TANK... 450-MILE RANGE
★ WING-DRIVEN GENERATOR
★ KEY-LOCKING IGNITION
★ TWO-TONE COLOR COMBINATIONS

FREE FLYING COURSE

in his own plane is offered the purchaser of a new Piper. It consists of eight hours of dual flight instruction . . . take-offs, landings, taxiing and fundamental air maneuvers. At the completion of this course the average person is ready to solo

FREE FOLDER

that shows the new Piper airplanes and gives complete specifications and details of the free flying course, will be gladly sent you on request or may be obtained from your Piper Dealer. Piper Aircraft Corporation, Dept. A21, Lock Haven, Pa., U.S.A.

Subscription rates—United States, Canada, Mexico and Central American Countries, $3.00 a year, $4.00 for two years, $5.00 for three years. Great Britain and British Possessions 20 shillings per year, 30 shillings for three years. All other countries $5.00 a year, $10.00 for three years. Entered as second class matter September 5, 1939, at the Post Office, Albany, N. Y., under the Act of March 3, 1879. Volume 40, Number 2

THERE IS A LEARADIO FOR EVERY PURSE AND PURPOSE—

Every Learadio instrument is built to fit a purpose. All that Learadio asks is—"What kind of flying are you doing, and what kind of ship do you fly."

Every Learadio unit has been engineered from scratch to perform a specific function in the most efficient way possible. Whether you come to Learadio for a bantam-weight portable receiver or a complete radio navigation and communications system, you will find a product designed to fit your problem in all its particulars.

Learadio knows how to build *aircraft* radio. Every principal Learadio executive is himself a pilot. Every phase of practical flying experience is represented in Learadio ranks, from itinerant lightplane flying to 'round-the-world navigation.

Learadio products have never been built to a price, and never will be. But thanks to vastly increased manufacturing facilities, Learadio products are sold at prices which informed aviation opinion everywhere endorses as *values*. You can buy cheaper equipment, but, dollar for dollar, you cannot buy *better* equipment.

Today Learadio quality is reflected in world-wide acceptance of Learadio products. You will find Learadio everywhere—from the lightest of lightplanes over the peaceloving Americas, to the snarling fighting planes over war-torn Europe; you will find it with backwoods charter services and on the longest transoceanic jumps; you will find it over the lowlands of the Everglades and over the highest mountains of Tibet; in all skies Lear Avia is doing its bit to make modern flying safer, sounder, and simpler.

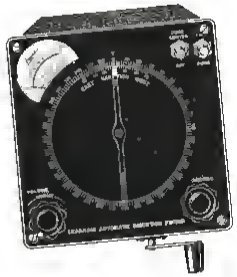
• • •

Illustrations show only typical Learadio equipment. There are Learadio receivers, transmitters, direction finders, and accessories for every purpose, for every type of aircraft. What is your problem? Write to us today.

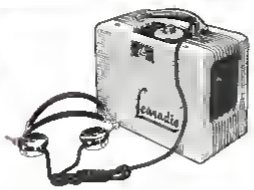
AMRL-12 RECEIVER, direction finder, and Interphone communication system. Dynamotor powered. Also available in AMRL-1 model for dry cell operation.

AMRL LOOP for aural-null direction finding. Rotated manually from the cockpit. Electrostatically shielded. Reduces precipitation static in radio navigation and communication.

AMT-12 TRANSMITTER. 10-watt output ... simple communications range. Same dynamotor supplies power to both AMT-12 transmitter and AMRL-12 Receiver. AMT-1 ... for dry cell operation.

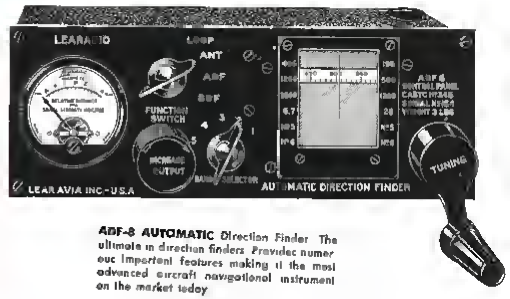


ADF-7 AUTOMATIC Direction Finder. Automatically points and stays pointed to any radio transmitting station within the range from 180 to 2800 KC. Communications reception up to 6700 KC.



TRI-POWR PORTABLE Receiver. Most popular aircraft radio unit in America. Operates from AC, DC or dry cell supply. Radio range and standard broadcast bands.

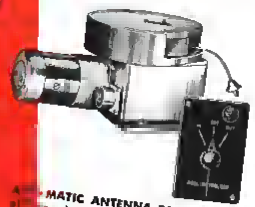
LOOP HOUSING for Learadio automatic direction finders. Features quadrantal error corrector of loop. High electrical efficiency ensures maximum performance.



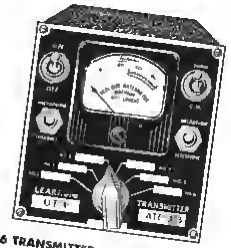
ADF-8 AUTOMATIC Direction Finder. The ultimate in direction finders. Provides numerous important features making it the most advanced aircraft navigational instrument on the market today.

R38B RECEIVER. An advanced, compact, high-performance unit. Radio ranges, weather broadcasts, traffic control, standard broadcasts, plus airways communications.

LEARMATIC NAVIGATOR. Earned its ... Inventor Wm. P. Lear ... Memorial A... ... with ... ... of complex navigation ... instrument approach problems.



...MATIC ANTENNA REEL. Gives the ... complete remote control command over ... conceivable antenna function by the ... of one simple switch. Automatic ... optional.



UT-6 TRANSMITTER. A powerful, compact, ... frequency crystal controlled unit. Specially designed for advanced flying, to overrule distance and static storms.

YOU CAN TAKE IT WITH YOU!

Figure 592. Drawer is extra.

● A great favorite in many aviation plants and hangars, this "HALLOWELL" bench travels with the job . . . saves steps, time, money.

Handles swing down and out of the way when not in use. Non-swivel casters at front and combined with sturdy steel pyramid type leg construction insures permanent rigidity and makes fastening to the floor unnecessary — an advantage typical of all "HALLOWELL" Benches.

As for tops, they're available of steel, laminated wood, Masonite or linoleum; they defy time and abuse —can't split, splinter or soak up oil. Yet, price invites your order!

This "HALLOWELL" model is but one of more than 1,300 styles and types stocked knocked down for immediate shipment to meet your ordinary or special requirements.

And remember, by specifying "HALLOWELL" you eliminate the fuss and bother of figuring lumber and labor costs incurred when you build your own bench . . . and you get a better, more durable bench at a fixed price, in less time and usually at less cost!

COMPLETE CATALOG free on request, lists all the "HALLOWELL" models. Write now?

AVIATION CAREER

Offers You

A GREAT FUTURE!

IN THE VERY CENTER AND A VERY IMPORTANT PART OF SOUTHERN CALIFORNIA'S GREAT AIRCRAFT INDUSTRY IS LOCATED CURTISS-WRIGHT TECHNICAL INSTITUTE

Established in 1929 in twelve years this famous school has come to be recognized as the nation's leading institution in the training of Aeronautical Engineers and Master Mechanics. Mr. Donald Douglas, President of the great Douglas Aircraft Company chose this school for his own extra training which pointedly indicates the high standing this school has attained in the aircraft industry.

You, who plan to invest in a course of career training, to prepare yourself for the future, must determine in advance what the returns will be on your investment before you put cash on the line. This is imperative since your choice of a school in which to take your training will determine how much money you will make all the rest of your life. Your whole future in aviation depends on your training.

Curtiss-Wright Tech's career training is carefully designed to do just one thing— TO MAKE MORE MONEY FOR YOU as upon graduation you can be independent and self supporting for life. For years our hundreds of successful graduates have proven that Curtiss-Wright Tech training gets results and always pays. It has provided them with a profitable occupation and secure future since it trained them in advance for the highest position they could ever expect to occupy. It can do the same for you.

Aviation needs trained men. They are in demand and at a premium. Advancements for them are rapid, especially here in Southern California where there are over $234,000,000.00 in unfilled aircraft orders on hand and where over fifty per cent of all aircraft manufactured in the United States is made. You can get in on the ground floor by training now BUT you must choose the right school for your training.

Our graduates are obtaining immediate employment and the demand for them far exceeds the supply. We honestly believe that every student who enrolls here will be able to obtain, with our assistance, immediate employment upon graduation. This school has never guaranteed or promised positions in its graduates, but practically every graduate has obtained immediate employment and is advancing steadily.

WARNING! —"don't miss the boat." The greatest opportunity of your lifetime exists today! There never was such an opportunity to assist you for there may never be another. A position awaits you. Insure for yourself a steady income and independence for life. Send in your enrollment today before you "miss the boat."

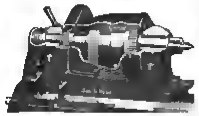
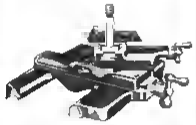
Precision is Assured IN A SOUTH BEND LATHE

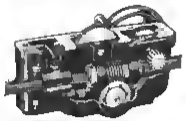


HEADSTOCK. Cutaway view showing integral type bearing and the capillary oiling system.

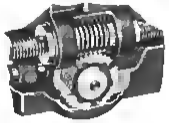
SUPERFINISHED SPINDLE is made of alloy steel with bearing surfaces carburized, hardened, ground and superfinished.



IMPROVED SADDLE and compound rest with adjustable tapered gibs. Cross slide bridge is wide and deep, providing rigid support for the tool rest.

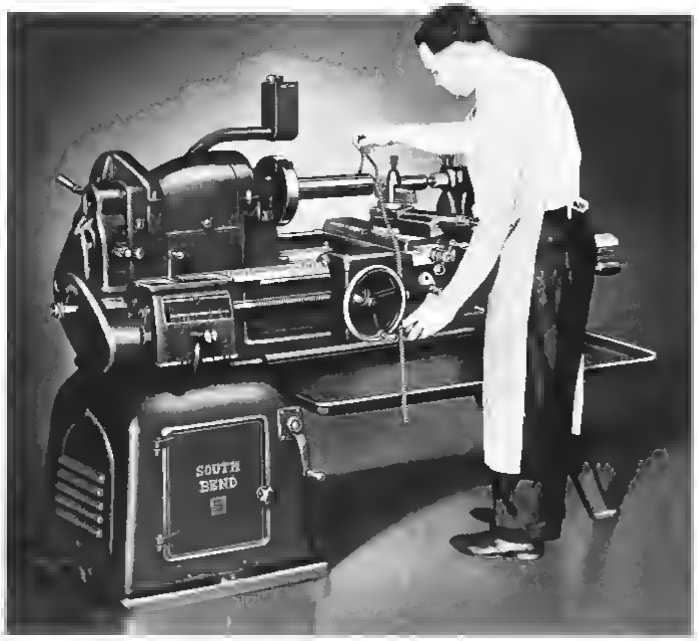


DOUBLE WALL APRON is rigid box type construction with all steel gears running in oil bath.



MULTIPLE DISC CLUTCH. Cutaway view shows alternate keyed steel disc construction.

UNDERNEATH MOTOR DRIVE. Belt drive to spindle is smooth and powerful and provides a wide range of spindle speeds.



PRECISION is assured in South Bend Lathes by combining fine workmanship with sound machine design. Expert mechanics, skilled by years of experience, fit and test each unit with a degree of exactness known only to the machine tool builder.

South Bend Lathes are used in the tool and gauge departments of nationally known manufacturers for the most exacting classes of precision work. They are also used for production operations on interchangeable parts requiring a high degree of accuracy. Conveniently located controls assure an ease of operation which reduces operator fatigue, resulting in a uniformly efficient rate of production over a long period of time.

South Bend Lathes are manufactured in over 65 sizes and types. Popular sizes are available for prompt delivery from dealer display stocks in important cities throughout the world. Made in 9", 10", 13", 14½", and 16" swing, in 3' to 12' bed lengths, in Countershaft and Motor Drives.

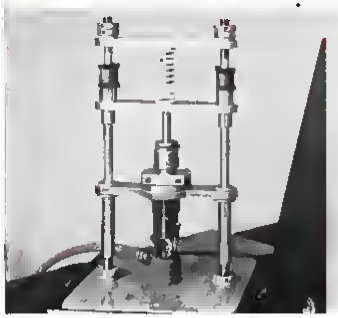
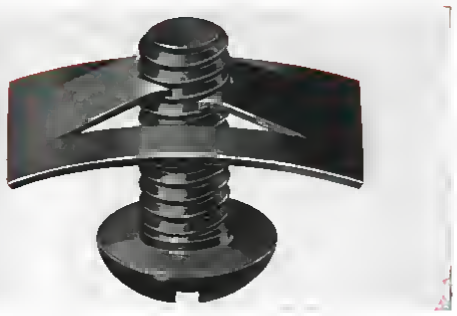
THE Speed Nut ON VIBRATION

One Speed Nut Outlasted

VIBRATION TESTING MACHINE



THE SPEED NUT



MATERIALS LABORATORY REPORT

ORJRCT. To determine relative resistance to loosening of nuts or to failure of nuts or other parts due to vibration.

EQUIPMENT: Vibration testing machine shown in photo above. Equipment operating on compressed air (95 to 100 lbs.) vibration 4000 cycles of 3/64" per minute.

PROCRDURR: One SPEED NUT and four approved lock nuts were assembled by hand on the equipment. Two thirty minute tests were conducted at 4000 cycles per minute. In both tests the same SPEED NUT was used untouched.

RRSULTS: After two 30 minute tests, SPEED NUT "A" was still holding tight. In the first test, lock nut "B" loosened after 4 minutes and in the second test loosened after 25 minutes—showing an average duration of tightness in assembly, of 14.5 minutes. Lock Nut "C" loosened after 6 minutes in the first test and after 4 minutes in the second test—showing an average duration of tight assembly of 5 minutes.

TINNERMAN PRODUCTS, INC.
MANUFACTURERS OF
IN CANADA: WALLACE BARNES CO., LTD., HAMILTON, ONTARIO

Breaks all Records

TESTS

4 Other Lock Nuts!

AIRCRAFT VIBRATION TESTING RESULTS AT 4000 STROKES PER MINUTE

	TIME IN MINUTES	FIRST TEST 10 20 30	SECOND TEST 40 50 60	AVERAGE
"A"	SPEED NUT	STILL HOLDING TIGHT		60 MIN.
"B"	A WIDELY USED LOCK NUT	LOOSENED AFTER 4 MIN.	LOOSENED AFTER 25 MIN.	14.5 MIN.
"C"	A WIDELY USED LOCK NUT	LOOSENED AFTER 6 MIN.	LOOSENED AFTER 4 MIN.	5 MIN.

CONCLUSION. These tests conducted by a prominent aircraft engineering laboratory credited the SPEED NUT with a rating of 100% as against an average rating of 24.16% and 8.33% for the approved lock nuts. Furthermore, the one SPEED NUT outlasted the aggregate life of the other four lock nuts tested.

We publicly thank all aircraft executives and engineers who have co-operated so loyally in getting the facts on conquering vibration and speeding up aircraft assemblies with SPEED NUTS. Yet there are scores of other locations where they should be used. Faster and more vibration-proof assemblies are of vital importance to our Defense Program. Let us all pledge to do our utmost—and do it NOW!

Each contains something money can't buy!

THERE is an intangible "something" that has been a part of the Eaton organization for so long that it has become a living tradition.

It is the driving force that keeps us striving for perfection. It is the spark that inspires in each of us, a personal feeling of responsibility for quality. It is the nudge that keeps us continually awake to the tremendous importance of fine workmanship. It is a vital part of everything that Eaton builds. It is something that money can't buy.

For nearly a quarter of a century, Eaton has served the aircraft industry. Has grown up with it. Has cooperated in the development of some of the most advanced steps in engineering and design.

Eaton has always been progressive—but never hasty. Has conscientiously built its products to meet the rigid specifications so rightly demanded by aircraft engine builders.

An organization brought up to do things well, continues to do them well. And Eaton is serving the aircraft industry in an even broader and more important capacity now, at a time when the utmost in engineering skill, in uniform production—and in fine quality—is so vitally needed.

The Sodium-Cooled Aircraft Valve was developed and pioneered by Eaton's Wilcox-Rich Division.

SPARTAN'S
$475,000
EXPANSION PROGRAM

Makes It the Aviation School for You

SPARTAN is setting the pace in modern equipment and training facilities... leaping ahead with a $475,000 expansion program that provides tremendous advantages for your aviation career

New Modern Training Planes—Eleven new planes, including four low-wing Fairchilds, considered the most modern training planes in the United States, have been added to the already large number available for flight students.

New Instrument Technician Department with $25,000 worth of special equipment has been established in a modern air-conditioned, fluorescent lighted laboratory.

New Equipment—One of the most complete repair, service and overhaul departments with facilities for taking care of 125 planes currently in use in civilian and military fleets... Another new comfortable dormitory and recreation room ... One of the most efficient new cafeterias in the Southwest ... New airplane paint and sand blasting shop... New eight-unit engine test house.

Spartan offers you extra advantages for whatever field of aviation you choose—Flight, Mechanics, Engineering, Radio, Meteorology or Instruments. Next semester starts March 31. Mail coupon now for 1941 catalog.

■ Spartan training is based on actual experience.

Canadian Airports

FROM NEWFOUNDLAND TO THE YUKON—WILL FIGHT HEAVY SNOWS WITH FWD TRUCKS

FWD Model SU
A true four-wheel drive truck designed and built for the job

70 FWD TRUCKS—A SINGLE ORDER FOR AIRPORT SNOW REMOVAL TRUCKS

OPEN airports all through the winter are vital to the British Empire Air Training Plan in Canada. This network of airports, extending from Newfoundland to the Yukon is subject to extremely heavy snowfalls.

70 FWD trucks of the SU series, equipped with displacement and rotary type snowplows, will soon be in service keeping landing fields and runways clear of snow — the training of fliers will "carry on" all through the severe Canadian winter.

There are many reasons why this — the largest single order ever placed for equipment of this type — came to FWD.

FWD's lead all others—4 to 1—in snow removal service — first choice for faster, lower-cost, most dependable method of combating snow. More different kinds of snowplows are mounted on FWD trucks than any other make of truck or tractor.

Full *four-wheel* power, speed and traction give an FWD the ability to smash through the deepest drifts — to move faster—do a cleaner job at lowest operating costs — in the work of clearing snow.

Write for the FWD performance record on snow removal.

THE FOUR WHEEL DRIVE AUTO CO. CLINTONVILLE WISCONSIN
Canadian Factory: Kitchener, Ontario

FWD TRUCKS

More than 8600 FWD's, equipped with "V" plows, rotary plows, and plows of every description, will combat and conquer the menace of snow blocked roads and keep airports open this winter

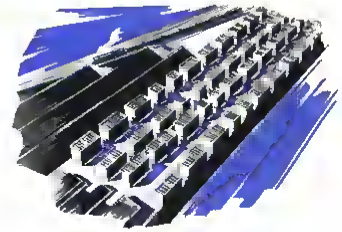
MORE THAN
A Million H.P.
A MONTH

WRIGHT AIRCRAFT ENGINES TOTALING OVER 100,000 H.P. READY FOR SHIPMI

WRIGHT REACHES NEW PEAK OF POWER PRODUCTION . . .

WRIGHT enters February with a rate of aircraft engine production never before equalled in America . . . well over 1,000,000 H.P. per month . . . and increasing rapidly. Yet 1941 will see this figure more than doubled with the addition of the new Cincinnati Division for which an expedited program of tooling and training is now under way.

Wright has pioneered in power. Only because of long years of experience in engineering and building aircraft engines has this vastly increased production been possible, and it has been effected without any compromise whatever in quality. Now a comprehensive training program is enabling thousands of new men to acquire the skill to meet aviation standards. Each day that passes sees the national position more secure with additional tens of thousands of horsepower for defense.



More than 75,000 horsepower is constantly on test day and night in the long batteries of soundproofed cells.

DRAWINGS

SPEED ENGINEERING CHANGE NOTICES—
(Project Slips)

Easy! Just make a Ditto master—written, drawn, typewritten, or a combination of all 3. Work is not delayed while changes and new blueprints are made. Used by all large automobile companies.

PUT ACCURACY and ACTION INTO PURCHASING and RECEIVING ORDERS

Ordinarily, purchases arrive in partial shipments. The Ditto forms shown here maintain schedules: (1) Ditto Master for each purchase order, with space for noting deliveries, (2) From this master come Vendor's Copy, Acct. Dept. Copy, Purch. Dept. Copy, Commitment, Acknowledgment, Follow-up Copy; (3) Master is filed in receiving department. As shipments arrive and are noted thereon, the master makes: Material Control Copy, Acct. Dept. Copy, Purchasing Follow-up Copy.

. . . AND DEBIT MEMOS

On rejected parts, debit the vendor's account and add to the next order. Run the following debit memo set from Ditto ribbon or carbon master: Voucher, Accounts Payable, Cost Dept. Copy.

. . . AND SNIPPER'S COPIES

These Ditto masters list serial numbers of major parts. As planes come through, serial numbers are added to the master. The copy then becomes a master on which are added additional serial numbers—a repeated process as more planes are shipped.

. . . AND 1001 OTHER DAILY JOBS

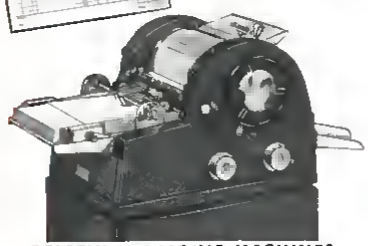
Duplicate all these with Ditto, 100—in 1 to 5 colors at once—on any card or paper stock. Sales Reports, Sales Letters . . Bulletins and Notices . . . Instructions . . . Charts, Graphs . . Telegrams . . , Forms . . . Lists . . . Schedules . . . Company Newspapers, etc., etc.

SIMPLIFY PAYROLL

Never rewrite timekeeping and payroll data. Let Ditto take it off the clock card or time sheet directly—make the whole process practically self operating.

. . . AND TOOL ORDERS

Order is issued for each part to be manufactured, listing operations and tools needed—typed through Ditto reproducing ribbon or carbon. Ditto machine then reproduces copies for Tool Design Dept., Planning Dept., Machine Shop, Machine Shop Tool Crib, Estimating Dept. Tools thus are ready when assembly order is released.

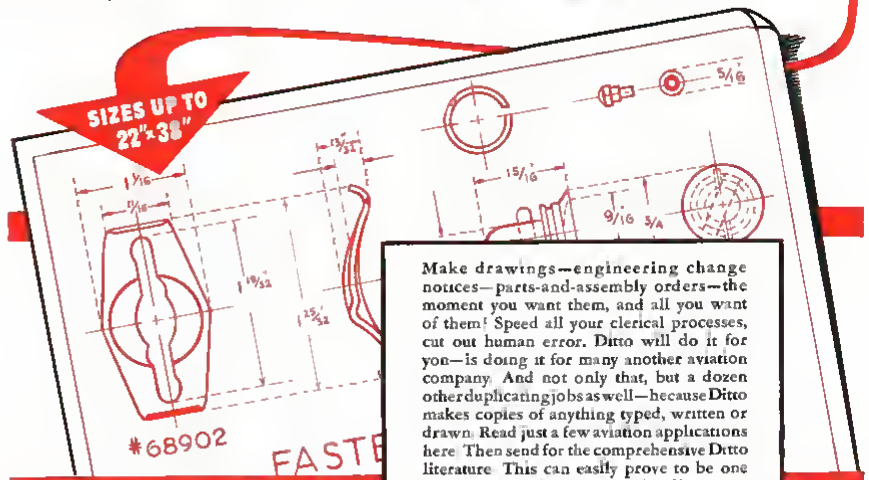


GELATIN and LIQUID MACHINES

Illustrated: Ditto D 44, newest electric automatic feed liquid type duplicator. Because Ditto leads, Ditto offers most advanced types of both gelatin and liquid duplicators.

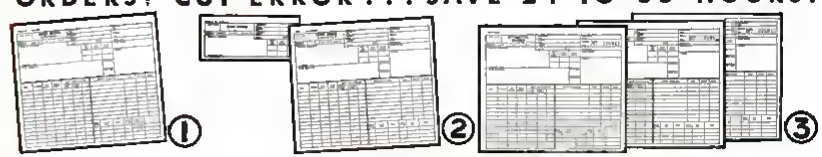
LIKE THIS

5c PER 100 . . . IN 5 MINUTES !



Make drawings—engineering change notices—parts-and-assembly orders—the moment you want them, and all you want of them! Speed all your clerical processes, cut out human error. Ditto will do it for you—is doing it for many another aviation company. And not only that, but a dozen other duplicating jobs as well—because Ditto makes copies of anything typed, written or drawn. Read just a few aviation applications here. Then send for the comprehensive Ditto literature. This can easily prove to be one of your firm's biggest steps ahead!

ELIMINATE ALL RE-WRITING ON PARTS AND ASSEMBLY ORDERS! CUT ERROR . . . SAVE 24 TO 36 HOURS!



1. Large Ditto Master shows constant information.

2. Small Ditto Master shows variable information.

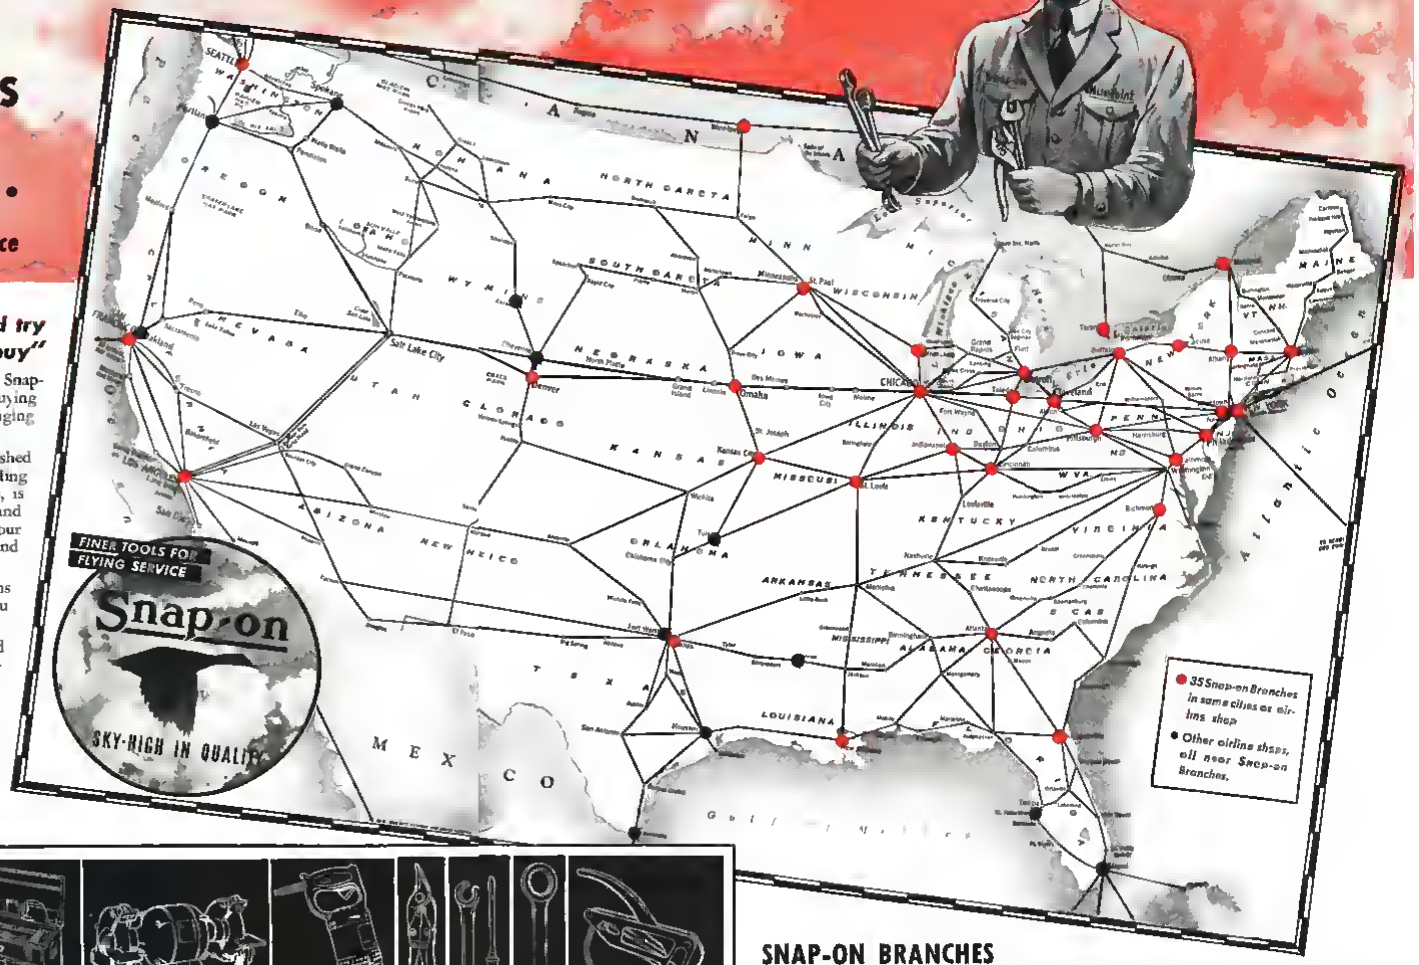
3. The two combined are run off on Ditto machine, making: Purchasing Order, Labor Card, Material Requisition, Material Receipt, Shop Copy, Production Control Copy, Estimating Record Copy, etc., all identical.

Write DITTO

Essential to any aviation executive and department head is Ditto's informative free literature. It shows how this industry is speeding routines, cutting costs, preventing error and interruption. Write for actual aviation forms and survey showing how aviation companies are using Ditto now. Inquire! . . Ditto, Inc., 652 S. Oakley Blvd., Chicago, U.S.A.

Snap-on Tools "in stock" at or near all plane shops and factories . . .

for production, maintenance, service



35 Branches give you "see and try service before you buy"

With a 20-year record of successful service to industry behind it, Snap-on's tool distribution system offers aviation a tested tool buying method "made-to-order" in its suitability to the quick-changing needs of aviation and national defense.

For Snap-on, with 35 fully tool-stocked branches already established at key air-centers, and 550 trained tool representatives travelling daily schedules to air craft plants, airways, shops and schools, is ready and equipped to meet a wide range of demands for tools and tool engineering. Snap-on representatives bring tools direct to your desk or bench, to see and try before you buy . . . 2200 styles and sizes, America's largest line of mechanics tools.

Snap-on engineers work with you on new designs and problems equipped by years of contact with tools in industry to serve you quickly and effectively

Snap-on service to manufacturers means increased production, to airlines — improved maintenance, to mechanics — greater skill; to students — a way to start *right*.

Catalog and consultation on any tool matters supplied without obligation See your Snap-on salesman, or write . . .

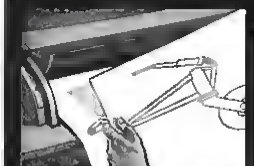
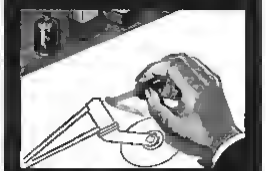
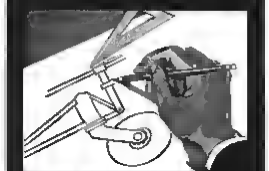
HOW OZALID SHORT CUTS SAVE DRAFTING TIME AND EXPENSE



1. An Ozalid paper, cloth, or foil transparent duplicate is printed and developed dry in the same simple manner as standard Ozalid whiteprints.



2. Any part of the original design can be dropped out on the transparent duplicate by the application of Ozalid Corrector Fluid



3 Corrections can be drawn in on the transparent duplicate in either pencil or ink. Prints made from the altered transparent duplicate include all changes. The original drawing remains unchanged.

NEW SPEED IN DESIGN CHANGES WITH Ozalid TRANSPARENT DUPLICATES

Industrial production zooms and drafting and design departments become jammed with work. Skilled machinists are scarce; good mechanical draftsmen scarcer. But undermanned and overworked drafting departments get a blood transfusion when they adopt the Ozalid Process.

No more difficult and exacting overlays—no more tedious and wasteful redrawing when Ozalid transparent duplicates are used. Delete that part of the design you don't want; add details in pencil or ink. Whole sections dropped out or just a few lines changed, it is all the same when reworking an Ozalid transparent duplicate.

Investigate how much "quick drafting" you can really do with an Ozalid machine in your print room. Send today for complete information on How Ozalid Cuts Drafting Time and Expense and also free booklet of dry developed Ozalid whiteprints.

Ryan ST-3

With the proud heritage of tens of thousands of hours in the hardest service to which airplanes can be subjected, the ST-3 is the crowning achievement in a long line of low wing trainers. With a longer and wider fuselage accentuating Ryan sleek lines the ST-3 abounds in engineering and structural refinements. Offered in a wider range of engines (2 radials and 2 in-lines from 125 to 160 h.p.) the ST-3 sets new standards of operating and training efficiency.

OVER 900 000,000 passenger miles to their credit That s the record of AMERICAN AIRLINES A record of safety and the utmost efficiency Goodrich salutes American! IT PAYS TO FLY

It's another AMERICAN AIRLINES FLAGSHIP purring by ...on regular schedule

Folks used to stop what they were doing and gaze skyward when they heard the drone of a plane Today they seldom do

Not because aviation has lost any of its romance- But because the industry has so developed that it is a recognized part of the scheme of things.

Long a leader in this development, American Airlines has done much to help the industry attain "more miles with more safety" And it has been our privilege at Goodrich to help American achieve this goal- Standard equipment on the Flagship shown above are Goodrich Silvertown Airplane Tires. These tires help the Flagship Fleet make safer, smoother take-offs and landings Also —all Flagships fly with the added protection of famous Goodrich DE-ICERS.

More than 50 products, developed by Goodrich research, are now serving the industry — on planes both large and small. If you'd like complete information, write airmail to the B F. Goodrich Co., Aeronautical Division, Akron, O.

Announcing

change in STANDARD coding for

ADEL-755 CLIPS

DUE TO RECENT CHANGES in military requirements all future production of ADEL CLIPS will be provided with ALUMINUM BONDING MATERIAL, thereby eliminating the necessity for 755-A coding previously required for procuring ALUMINUM BONDED ADEL CLIPS. Hereafter, TINNED COPPER is to be available only on special order

Color differentiation of BROWN NEOPRENE for distinguishing ALUMINUM BONDED CLIPS is likewise eliminated. All future production parts will be supplied with BLACK NEOPRENE MATERIAL because of improved quality as compared to colored compounds

As a means of clarification, CLIPS will continue to be stamped "ALUM BOND," thereby providing differentiation between hundreds of thousands of original design BLACK CUSHIONED TINNED COPPER CLIPS manufactured by Adel for the past several years and the new production BLACK CUSHIONED ALUMINUM BONDED CLIPS The above revisions also apply to Adel-766, 770, 782, 784 and 788 LINE SUPPORT CLIPS

ADEL DUAL PURPOSE LINE SUPPORT BLOCKS will be provided with a BROWN BAND to distinguish between previous production TINNED COPPER assemblies and new ALUMINUM BONDED units

While the above revisions may at first cause some inspection, receiving, and production misunderstandings, the ultimate standardization will result in substantial simplification in stockroom and production line handling.

Universal acceptance of Aluminum Bonding as recommended by Adel Engineers for the past three years will further enhance performance already proven by military and commercial application on ships operating under all types of service in every part of the globe.

SPECIAL REINFORCED METAL CLIP STD ADEL-755 CLIP

ALL ADEL DUAL PURPOSE LINE SUPPORT BLOCKS AND CLIPS ARE MANUFACTURED UNDER UNITED STATES LETTERS PATENTS NOS 2,215,283 and 2,227,528; OTHER UNITED STATES AND FOREIGN PATENTS PENDING.

"THE VALUE OF TIME"

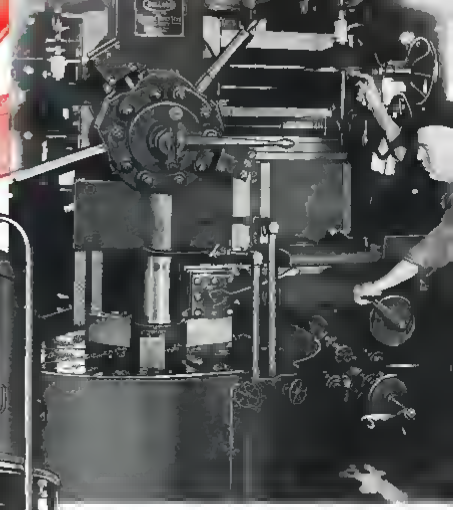
"As we advance in life, we acquire a keener sense of the value of time."

(William Hazlett 1778-1830)

Because men value time so highly, Aviation has already become one of our greatest industries. Its own members know the value of time full well —from every angle.

Every engine, each propeller or instrument—every part whose accuracy is so important to sustained performance, must be duplicated on a grand scale and in minimum time.

Saving Time is Bullard's mission. Bullard Mult-Au-Matics and Bullard Vertical Turret Lathes are fast, economical, and easy to operate—more, they are constructed with the same kind of care, knowledge, and skill which the aviation industry demands of its own designers and builders. That's why Bullard machine tools are selected for machining parts that must be accurate and turned out in great numbers. That's why they are today in practically every shop devoted to aviation parts manufacture. Let Bullard Engineers analyze your machining operations.



Vertical and side heads work simultaneously o this Vertical Turret Lathe, to save time and in crease accuracy in turning out these aeroplan engine sleeves.

This 16" Type "D" Mult-Au-Matic has cu the time for producing propeller hub spide from 5¼ hours per part to 25 minutes an 30 seconds per part.

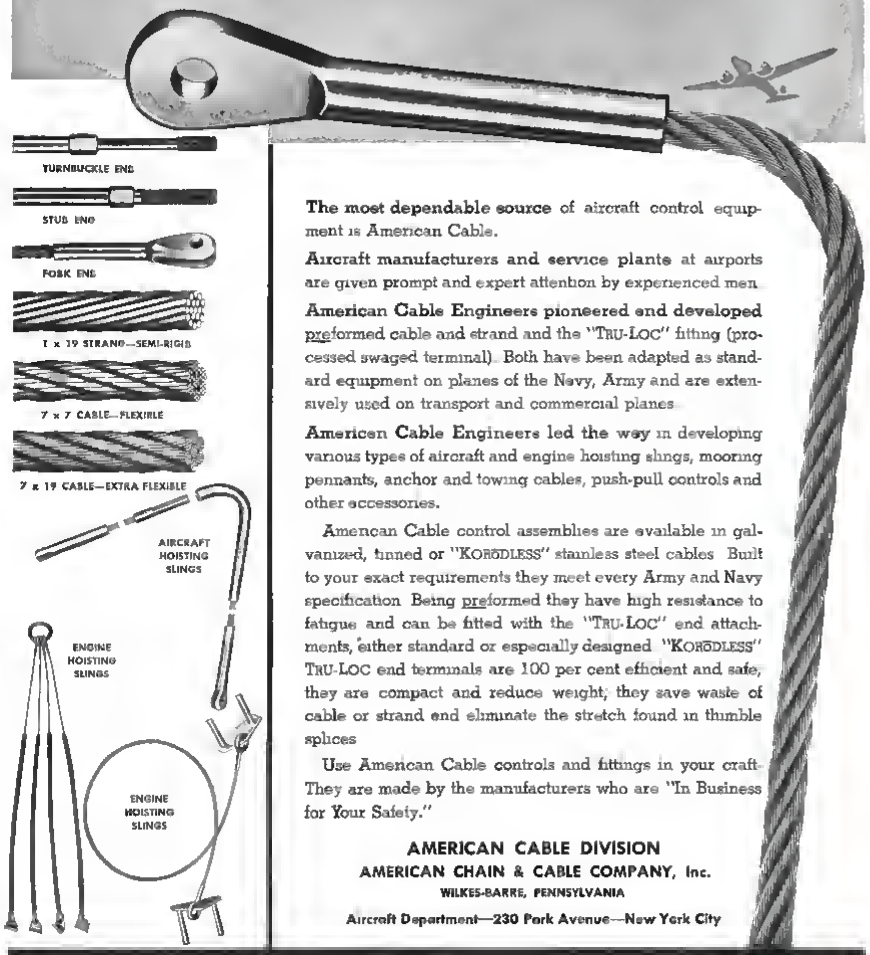
BRIDGEPORT CONNECTICUT

American Cable "KORŌDLESS"

AIRCRAFT CONTROL EQUIPMENT



The most dependable source of aircraft control equipment is American Cable.

Aircraft manufacturers and service plants at airports are given prompt and expert attention by experienced men.

American Cable Engineers pioneered and developed preformed cable and strand and the "TRU-LOC" fitting (processed swaged terminal). Both have been adapted as standard equipment on planes of the Navy, Army and are extensively used on transport and commercial planes.

American Cable Engineers led the way in developing various types of aircraft and engine hoisting slings, mooring pennants, anchor and towing cables, push-pull controls and other accessories.

American Cable control assemblies are available in galvanized, tinned or "KORŌDLESS" stainless steel cables. Built to your exact requirements they meet every Army and Navy specification. Being preformed they have high resistance to fatigue and can be fitted with the "TRU-LOC" end attachments, either standard or especially designed "KORŌDLESS" TRU-LOC end terminals are 100 per cent efficient and safe, they are compact and reduce weight, they save waste of cable or strand end eliminate the stretch found in thimble splices.

Use American Cable controls and fittings in your craft. They are made by the manufacturers who are "In Business for Your Safety."

MENASCO announces

the New D4 and D4-B

IN-LINE, INVERTED ENGINES OF 100 AND 160 H. P.

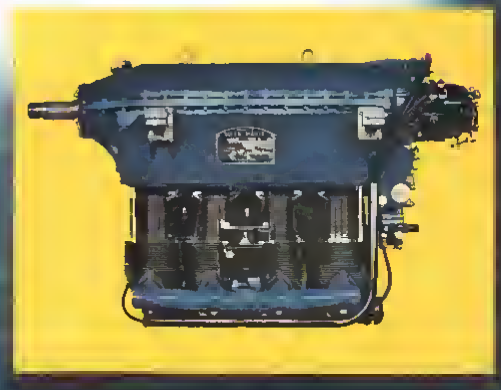
There is a new Menasco organization, a new Menasco Spirit, a new group of experienced engineers, and a new Menasco plant as modern as any in American industry.

Now, as a result, Menasco introduces two new four cylinder engines of 125 and 160 horsepower. These new engines offer all the features and advantages of the Menasco-pioneered in line, inverted basic design.

But in addition, they offer improvements and advancements usually found only in engines of much higher horsepower and price.

Their design, performance and low maintenance cost make them ideally suited for school or military training and private use.

MENASCO MANUFACTURING COMPANY, BURBANK, CALIF.



THE Lockheed LOG

LEADERSHIP in stamina

STAMINA is a Lockheed by-word! It is a "built-in" ruggedness that enables transports to endure the punishments of tougher airline routes. It is an inherent characteristic that allows peacetime airplanes to be transformed into bombers...bombers that can take the unmerciful pounding of aerial warfare...yet return home safely. It is one of the reasons Royal Air Force pilots call Lockheeds the "Wizards of Britain's Defense."

This quality of invincibility in Lockheed isn't something that happens in just one out of ten cases! It is in every Lockheed...commercial or military. From first drawings to final flight tests the abilities of twenty thousand Lockheed employees have been concentrated on one aim...to make every Lockheed the best Lockheed.

If you could cut through the sturdy wing of a Lockheed, you'd understand how it can withstand even the brutal pounding of a direct hit. From wing tip to wing tip stretches a single spar that's built like a bridge for greatest strength—This is another construction feature characteristic of traditional Lockheed DEPENDABILITY...typical of the entire design and construction of the airplane

A hole in the wing big enough to crawl through and other severe damage was not enough to keep this Lockheed "Hudson" Reconnaissance Bomber from returning safely to its base. High performance, exceptional maneuverability and dependable construction provide that STAMINA so necessary to get out of tight spots.

Printed in U.S.A.

LOOK TO *Lockheed* FOR LEADERSHIP

CYCLONE!

In these days of plush-lined cabins always remember there's a cyclone right outside! And it doesn't take a pursuit ship in a 9g dive to get it, either, after all the wind's blowing 200 m.p.h. past your cruising airliner.

Don't forget that wind is striking like hammer blows at every spot you leave open for it. Ready to grasp at the slightest loosness in an elevator hinge, in a fraction of play in an aileron link, or a few degrees of wobble in a control pulley—and hammer a slight rattle into a sickening flutter.

That's why the easiest, most sensitive control system that flies will stay that way just as long as friction and wear are kept out of bearing points.

So when you make your ship easily controllable with ball bearings, you might as well make it *stay that way* with quality aircraft ball bearings. With extra values like Fafnir's races of SAE 52100 steel, through hardened. With Fafnir's dependable one-piece race design and grinding to precise limits of contour radius, pitch diameter, radial and lateral eccentricity.

Special plating, ammoniac greasing equipment that measures pre-lubrication to the fraction of a gram, inspections at every step of manufacture . . . these are all extra values that cost only a few pennies per bearing. But they represent a big step forward in controllability, safety and low maintenance.

The cost of the finest aircraft ball bearings is so insignificant a part of the ship's total cost that you can letter 'Fafnir' at the right spots right on your sketches without unbalancing the budget. The Fafnir Bearing Co., Aircraft Division, New Britain, Conn.

FOR AIRCRAFT ENGINES AND CONTROLS

PROGRESS

As shown by the photographs, very substantial progress has been made in the construction of the additions to the Beech Aircraft Corporation plant. In spite of considerable unfavorable weather, the new buildings are being erected on schedule and should be ready for production operations as originally planned.

The entire personnel of the Beech Aircraft Corporation looks forward to a substantial participation in the National Defense Program in the near future, when quantity deliveries will commence.

Private Flying Has Its Greatest Year

» THERE is wholesome satisfaction in being able to present an issue of AVIATION dedicated to private flying while defensive preparation is seen on every side. It is our fervent hope that private flying's greatest year will not constitute a peak but will be just a stepping stone toward many greater years, and that the light plane industry will continue to expand along with military manufacturing. But the light plane makers and the manufacturers of engines and accessories for private flying must face emergency conditions squarely. It is unpleasant but not unlikely that they will be faced with priorities and with diversion of basic materials and even some of their skilled labor to the defense industries. Such drastic steps should under no circumstances be taken without absolute conviction of their necessity by those empowered to take them. But the light plane industry must not sit back and wait for these things to happen. Now is the time for you to double your design and development strength and go back to the laboratory for the answers. Somewhere in the vast resources of this nation are materials less urgently needed for defense. Somewhere in the great accumulation of aeronautical research data is the answer to increased efficiency without the eternal addition of more and more engine power. And somewhere in the manufacturing mind there is a method of building many more units with fewer workers. Never before has the commercial industry been in greater need of straight thinking, engineering, and research. And those who realize it and do something about it right now will be those who are still with us after the war.

That's not all. There are a few things for the fixed base operators to think about too. Most of you fellows in the last couple of years have made more money than you ever did before. Uncle Sam has dumped students into your laps and some of you have gotten to be a little soft on your selling. There may be some changes due in your picture. Already CPTP funds have been cut in half. Probably some of your best non-subsidized prospects have been drafted and selective service has just begun. This isn't as bad as it seems. Maybe the defense program gripes you but it is going to furnish you a prospect list bigger and better than you ever had before. There will be jobs for everyone, the ladies too. And they will have more money to spend on flying. Your job is to get out and find them, and drag them to your airport. You better get busy now if you want to keep your two-car garages full of your own automobiles.

We have digressed a little—quite a little from what we started to say. This is the largest, the most attractive and most complete Annual Directory we have ever offered. We are afraid to look at the production cost figures. It has more pictures and three-view drawings of

During a Bombing Raid—You would never suspect that an air raid was going on while this photograph of J. H. Miller, Managing Director of Aviation Corporation Ltd., was being taken. Mr. Miller's letter is printed on the following page.

Light Airplane Exhibition
in Spotlight

THE EASTERN LIGHT AIRPLANE EXHIBITION will be an important part of this year's National Sportsmen's Show, at the Grand Central Palace, New York, February 15 to 23.

Besides popular light planes, there will be displays sponsored by the Airplane Owners and Pilots Association, the Civil Aeronautics Board, the Navy, etc

The Texas Company has, for many years, played an important part in the aviation industry through cooperation with designers, builders, and operators in the development of more effective lubricants and fuels for aviation engines

Because of the efficiency and economy experienced by airline operators through the use of *Texaco Aviation Gasoline* and *Airplane Oil*,

MORE SCHEDULED AIRLINE MILEAGE WITHIN THE U. S. AND TO OTHER COUNTRIES IS FLOWN WITH TEXACO THAN WITH ANY OTHER BRAND

The outstanding performance that has made Texaco preferred in the aviation field has also made it preferred in the fields listed in the panel

These buyers are enjoying many benefits. You, too, will find important advantages when you use Texaco Aviation Lubricants and Fuels.

A Texaco Aviation Engineer will gladly cooperate in making savings for you. Phone the nearest of more than 2300 Texaco distributing plants in the 48 States, or write:

The Texas Company, *Aviation Division*, 135 E. 42nd St., New York, N.Y.

They Prefer
TEXACO

- ★ **More tourists use Texaco *Fire-Chief* Gasoline than any other brand.**
- ★ **More scheduled airline mileage within the U S and to other countries is flown with Texaco than with any other brand.**
- ★ **More buses, more bus lines and more bus-miles are lubricated with Texaco than with any other brand**
- ★ **More stationary Diesel horsepower in the U.S. is lubricated with Texaco than with any other brand.**
- ★ **More Diesel horsepower on streamlined trains in the U.S. is lubricated with Texaco than with all other brands combined.**
- ★ **More railroad rolling equipment in the U.S. is lubricated with Texaco than with any other brand.**

TEXACO DEALERS INVITE YOU TO ENJOY

TEXACO Lubricants and Fuels
FOR THE AVIATION INDUSTRY

airplanes and more names of companies and people than anything we have done since 1929 and in that year there were too many airplanes as we all know In addition it has more detailed perspective sketches and cutaway drawings than we can remember in any single issue of an aeronautical publication Complete specifications, performance, and equipment are given with each airplane photograph and three view wherever available and complete data on all airplanes and engines in production and a few that are not are condensed into our compact "easily detachable" Specification Tables for those who wish to make quick comparisons of models The usual engine pictures are replaced where possible by perspective installation drawings which tell a far more complete story There are many other improvements We hope you will tell us how you like it

» MISFORTUNE DOESN'T IMPRESS you greatly until it involves some one you know, and we are beginning to receive reports first hand from friends in England. They bring the war much closer to us First letter was a brief note from our London colleague and front line reporter, C G Gray, who explained the nonappearance of manuscript we planned to publish in January It said simply, "I have just been bombed out of house and home, and consequently my affairs are so disorganized that I cannot find time to do the article which I had promised myself I would do for the January number of AVIATION. I hope to send something really good when the mechanism of my office is in better order"

» MORE REVEALING is another note received by one of our friends from Mrs C G Gray It read—

"Just a line to say hello. We are all well The children and I are in a primitive cottage thankfully Charles comes for the week ends

"Our home was blasted last Friday (November 30) large holes in the roof, windows blown out, top floor full of metal and main water pipes

"Charles was safely here—praise be.

"The kids go to the village school and we are living next to nature We can get eggs and onions here which are almost unheard of in town"

» ANOTHER London letter is from J. H. Millar, Managing Director of Aviation Corporates Limited, dated December 4

"It is quite a while since I had the pleasure of seeing you and much too long since I heard how you are getting on

"As a constant reader of 'AVIATION' I would like to take this opportunity of telling you how much the information you publish is appreciated over here and how valuable it is for us to get factual news on which we can rely.

"Among our other activities, we have been the British agents for Consolidated Aircraft Corporation of San Diego, California, since January 1939 Our work for Consolidated has necessitated close contact with the many important departments of the Air Ministry Naturally, with Consolidated's rapidly growing business, our work for them has increased enormously

"In case you would find it interesting enough to publish in your valuable magazine, I enclose a picture that was taken recently An air raid which was in progress at the time did not bother the photographer at all

"It is quite exciting being here. The other night my apartment folded up all around me while I was asleep in bed I woke up to find the window frames, curtains and shades lying across the bed, the bed itself was full of glass and the room was full of broken bricks, rubble and pieces of concrete Except for a few scratches I was quite unhurt

"We do not regard this as living dangerously, but driving a car in the country in the black-out when there is no moon is definitely dangerous I was following what turned out to be a 6 ton Lorry when it pulled up suddenly in front of me on a narrow road and my car ran straight into the back and was wrecked. Fortunately I was not much hurt but on other occasions people have been seriously injured

"We in this company will be very glad to hear from you and those in your organization who may find the time to write If you will be good enough to publish this picture it will show our many friends in the American aviation industry that we are still alive and may remind them to write and tell us how things are going with them"

IT PAYS TO ***FLY***

"As soon as Maguire masters that monocle, they're going to lend him to Britain!"

Big bombers need big "legs" and *Bendix builds them!*

Full-capacity loads of fuel and bombs mean a strenuous "workout" for the landing gear when a big bomber takes off. Frequently, the runways are none too smooth . . . and landings under still worse ground conditions are always a fair likelihood. So the extreme care with which Bendix manufacture surrounds the production of Bendix Pneudraulic Shock Struts, Aircraft Wheels and Brakes and Tail Knuckle Assemblies is a vast reassurance. Closest control over metallurgy, design, dimensioning, machining, finishing, assembly and testing is maintained, for the sake of the all-important desire of all concerned—"happy landings!"

Side Slips

» Have You Heard about the aircraft executives whose plants expanded so much they had to get themselves electric scooters to run around on? Well, they did. We read it in a newspaper,

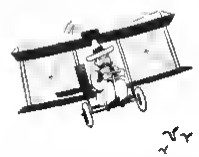
This development pleases us no end. One time when we were just getting into aviation, because it had a wonderful future, a very big executive heard about a little muddle of ours and he told our immediate boss to obtain our resignation. This big executive seemed to us so high and mighty that we didn't dare go and explain things to him. Instead we fumed at night, picturing ourself walking into his office with a large shovelfull of fertilizer, and throwing it all over his desk, with a silky laugh. We didn't do it, of course, and neither did we get fired. But we never got over the ordeal, still feel meek and inferior. Or rather we did till this scooter story came along. Now, we have only to picture this executive of ours trundling down an assembly line on his scooter, and we feel as aggressive as any tom cat.

» The Other Day we were lunching, on another man's money, in a very flossy dining room with soft music and potted palm trees and breast of guinea hen under glass, when in came John Lewis, the poor man's advocate. One of our party looked at Don John and said he was reminded of the new air transport building in New York. He said that, though the building was not open, a few elevator operators were hired to handle the up and down business of general preparations. They all belong to a union. One day the union head man came along and said the building hadn't been formally dedicated yet, and the management would have to hire "hoist engineers" to run the elevators. So, the building hired hoist engineers at some fabulous wages, like $25 a day apiece. First stuff that came along to be hoisted had been manufactured by CIO, and the AFL hoisters refused to hoist it. By the time the difficulty was straightened out, it was 30 min. before quitting time.

» Every day or two of late we hear somebody talking about the gasoline buggy boys mushing in on the flying machine business. Some of the popular magazine magnates are pleased, we hear, they think Detroit will have more money to spend for ads. Nearly everybody else appears to be neutral, including the Washington Administration, which is supposed to be hoping for a speed contest between the aeronauts and the autocrats. All the government wants is lots of airplanes. But some of the financial experts give you the wink and suggest that the aviation pioneers should turn over the industry just as the "emergency" ends, and let it collapse in Detroit's lap. As for us personally, we'd like to see a bit of cross-breeding. Let the two camps get together and turn out a "thrilling, exquisitely styled value sensation for 1945," that will slither out of the garage and down our country lane to the nearest landing strip, where it will spread its wings as we turn a knob, and whisk us away to the town airport, thence to the parking lot. And look here, you boy, we don't want that propeller crinkled, see!

» You Might Be Interested in knowing that Richard du Pont, the serious young man who put over the air mail pick-up system, does not want to take in the whole country. He wants to see other operators get in and start air hook lines. We've about given up making predictions, but we think that puddle-jumper mail lines will net-work all the populous regions of the United States. One good little airplane, equipped with a snatcher, can deliver and collect mail at a score of towns in an hour or two. It looks to us like a set-up for ambitious young men. In fact we know of two or three new projects that are being promoted now.

» Man and Boy, we've been riding in airplanes now for over 20 years. And we still think it is miraculous. While other passengers are sleeping with their mouths open or reading newspapers during a takeoff, we are craning our neck at everything, like a first timer. This behavior always brings the stewardess to tell us what river we are crossing, how to operate the air valve, and what the altitude is. We used always to say 'Listen here, young lady, we flew these things when they were made out of bamboo fishing poles." But



not any more. We found out that bragging about flying airplanes which are now in the Smithsonian museum is not the way to cut a dashing figure before these 1941 dural gals.

Photo from Wide World

The British Aircraft Carrier "Illustrious", which was severely damaged by German dive bombers, January 16.

WARS PROGRESS

Highlights from the Front and Comments on Our Own Defensive Efforts

MOST of the lessons learned so far in this phase of the war seem to be negative. A twenty mile strip of water seems to have upset the Continental technique of the "Blitzkrieg". Skies full of bombers appear to have done little more than to present a better target for determined defenders and to push to prohibitive proportions the loss ratios of attackers. Adequate defense against night bombing remains unsolved but best British brains are hard at work on it. When this is accomplished the next step may be heavy attacks on shipping beyond the easy range of shore based fighters and unhampered by heights necessary to stay out of range of anti-aircraft land batteries.

Then there may come the answer to the riddle of air power vs sea power. The recent sinking of the modern armored Crusier Southampton and the severe damage to the Carrier Illustrious by heavy German dive bombing constitute the greatest proof so far of the effectiveness of aircraft against naval vessels. It is not sufficiently conclusive to recommend that we junk our navies but it is a long way from the record of the first World War when no warships were lost or severely damaged by air attack. This indicates a trend that we must not fail to recognize.

Miracle men are springing up on our side of the Atlantic with solutions to the aircraft production problem. One of the most recent was C.I.O.'s Walter P. Reuther whose plan was to use the idle capacity of the automotive industry in some strange fashion to produce 500 planes a day. Our advice to these well meaning gentlemen is to leave the number of planes per day out of their public utterances. The minute they put them in their arguments become as weighty as a chunk of beryllium. What none of them seems to understand is that nobody in this whole wide world, not even Hitler, *wants* 500 planes a day. No one would know what to do with them if he had them. Airplanes need materials, parts, man-hours of labor, engines, propellers, gasoline, operating bases, organization, pilots, mechanics and morale before they constitute an air force. And even then, if you use too many of them at once to bomb a powerful adversary, you are just making it easier for the enemy to hit a larger proportion of them. The Germans found that out last summer when their losses compared with the British reached alarming proportions. A few figures from a recent speech of President John H. Jonett of the Aeronautical Chamber of Commerce will straighten out your thinking if you are one of those wishful ones who accept this or any other 500-a-day idea. Taxpayers will be interested in the cost,—$25,000,000 a day or $7,500,000,000 a year. Shop employees required,—1,500,000 to 2,000,000 who, with their families, would constitute a community of more than 9,000,000 persons. Machine guns needed, 4,000 a day or nearly one-half of the present annual production every day. And engine and propeller production expansion greater than that of the Biblical loaves and fishes. The age of miracles has passed. The people of the United States should appreciate that the aviation manufacturers have not gone out looking for Aaron's rod but have settled down to do the job the hard way. That is the only way to get it done.

This doesn't mean that there is no place for the automotive industry in the picture. Much of its capacity can and should be used along with that of manufacturers of elevators, automatic stokers, and other devices far removed from aviation. But the place for these producers is in the great army of subcontractors and sub-subcontractors who will be needed to spread the productive efforts. Before the present expansion most of the aircraft factories and one of the two largest engine factories attempted to make as much as possible of the finished product under the home roof. Some of the large plane factories were combinations of landing gear plants, seat plants and many other kinds of plants. Now, with increased quantity orders, many are becoming primarily assembly plants. You cannot walk through any of the large factories without seeing the effects on manufacturing methods of larger quantity orders. One plant actually has a perfectly straight assembly line which it plans to develop into a belt conveyor system.

These production methods were completely impractieable in the days when 100 to 150 ships of the same type constituted a record order and might be spread over a year or two. We must not forget that these dark days are not very far behind us.

The aircraft industry is seizing every possible opportunity to devise and introduce production methods adaptable to the larger numbers of parts it must produce. But that number may never reach the high proportions of the automobile industry and the methods cannot be the same. With the high strength—weight ratios required for everything that must fly plus the exacting specifications and inspections required by the military services, there can be no comparison of quality with automotive parts and assemblies.

Most of the automotive manufacturers have found and are finding that they must start from scratch to serve the aircraft industry. Only a small part of present idle capacity could be used for airplane or engine parts manufacturing. The most successful automotive subcontractors will be those who build new plants or retool old ones.

There is a disposition of press and public to assume that the large scale automotive subcontracting plans now in formulation in Washington are going to start to-morrow. Actually most of them are a year or more away. They are being devised to supplement the present program. It will probably be well toward the fall or later before deliveries of basic materials, shortages in light alloy castings and forgings, and engine, propeller, and critical sub-assembly production problems are satisfactorily straightened out.

A leap in the production curve may be expected this year but it will be heavily weighted by trainers and properly so because we must have pilots as well as planes. The total poundage of planes therefore will not increase as rapidly as the numbers of units produced. In December the production score was 799 airplanes. The estimate published in AVIATION for January (The Truth About the Defense Program by T. P. Wright) was about 750. The difference was due to an unexpected flurry of engines for some airplanes that had been standing on "glider lines". By February we should be up to 1000 per month and we should double this rate by fall.

No matter what we do this will be the critical year for the British. With one-half of our plane production, England should attain equality with Axis production rates by summer but air force parity will not be reached until the spring of 1942. If Germany waits beyond next fall, her chances of victory will diminish very rapidly. It is therefore reasonable to expect major Nazi operations at any moment.

Meanwhile our own defense effort is being strengthened by streamlining the Defense Commission and creation of the Office of Production Manager. Last month we published an article in which the author said that one total defense fundamental was "the determination to sacrifice a normal comfortable way of life and to work increasingly and uncomplainingly to attain the desired end." Since that was written it has been put into practice. T. P. Wright has gone to Washington as Associate Director of Aircraft Production for the newly formed O.P.M. And if you think his job is going to be fun, go down and try it for a day or two. Ted Wright sweltered all last summer to get the air defense procurement program underway, and to straighten out a lot of crooked thinking. While Congress was kicking the program around or ignoring it, he went back to his old job of vice president-engineering for Curtiss-Wright. He has a broad technical background and has had more than twenty years of experience in all phases of aircraft and power plant manufacturing. He has visited, revisited and studied most of the important aircraft plants in Europe. He is thorough, sound, and impartial and is universally respected even by his competitors in business. He will give to this job far more than it ever can give to him. It is extremely fortunate for the aviation industry and for the nation that his sincerity compelled him to accept it.

Continuing his important contribution to the defense program is Dr. A. J. Lombard whose work has already attracted so much favorable attention in Washington and elsewhere. Dr. Lombard has a thorough aeronautical engineering background and has done brilliant work in research, development and design.

The modern armored cruiser "Southampton", sunk in the January 16 dive bombing attack.

A. J. Lombard heads Productioo Planning Section, Division of Aircraft Productioo, of O.P.M.

T. P. Wright who goes to Washington as Associate Director of Aircraft Productioo for O.P.M.

Increases in all phases of civilian flying have brought new markets to private builders

Civil Plane Production Reaches All-time High

MORE civilian airplanes were produced in the United States in 1940 than for the four years of 1932 1933, 1934 and 1935 Approximately 6,870 civil planes were built last year This is an all-time record for any single year in any country

In a world at war, civilian aviation has practically ceased to exist in all European and Asiatic countries The United States is the only country remaining where private flying is an important factor in the nation's aeronautical life This state of affairs is due to the sober fact that we have not become involved in the war While the war has eliminated private flying elsewhere, it has been responsible for the great impetus given flying and the demand for light planes by the Civilian Pilot Training Program

The 6,870 civilian planes built in this country last year were nearly twice as many as the number built in 1939, when 3,715 such planes were produced More than 6,000 of these airplanes were in the light plane group The balance was composed of larger ships for various private and non-scheduled purposes and for airline use

The trend in lightplanes was strongly away from the 50 hp models to those with 65 hp Almost no airplanes were equipped with 40 hp engines The radical change from 1939 to 1940 is shown by the figures from one manufacturer of light engines In 1939 some 78 percent of his engines were of 50 and 55 hp and only 21 percent were of 65 hp Last year 13 5 percent of his engines were 50 and 55 hp and 84 5 percent were of 65 hp This transition to greater horsepower is seen all through the lightplane field

Piper Aircraft Corporation again led the procession A total of 3,013 airplanes were delivered during 1940 This is about 60 percent more than the 1939 figure Of this number, 1 977 were Trainers, 541 were Coupes and 495 were Cruisers Approximately 76 percent of the planes were kept by operators for instruction and the balance went directly to private pilots During the year Piper added some 73,000 square feet of floor space and may very likely add that much more this year

Production figures at Piper for six years, beginning in 1935 are as follows 228, 523, 683 731, 1806 and 3,013 Output last year was 1221 percent over the 1935 production

Undoubtedly the greatest percentage gain in the lightplane field was that of Taylorcraft, who stepped up production some 92 percent over 1939 The plant at Alliance, Ohio turned out 924 airplanes, as compared with 480 in the previous year Of this number 58 percent were Taylorcraft Deluxes and 42 percent were Trainers However, as many of the Deluxe models were used for training it is safe to say that over 500 of these ships became part of the civilian training program for national defense During the year orders for over 1,000 planes were received Eighty percent were for 65 hp models Since June production has been at the rate of about 25 planes per week The new plant just completed will have a capacity of 2,000 planes per year on one shift per day, or some 3,500 from two shifts

The Aeronautical Corporation of America turned out 875 airplanes last year, an increase of 31 percent over the 1939 production Aeronca got off to a slow start when floods in the spring impaired production and then further delays occurred when the factory was moved to Middletown, Ohio During the last five months production was stepped up and reached an average of 135 per month a rate of 1,620 planes per year which gives an indication of what the plant can turn out During the year some 35,000 square feet of floor space was added and at present an additional 27,500 square feet are being added The new space will include an enlarged final assembly department, a new experimental department and a new wood shop

All photographs from Hans Groenhoff

Luscombe increased its airplane output by 74 percent over the 1939 amount Last year 495 airplanes were sold as compared with 285 for the preceding year These all-metal planes are becoming increasingly popular at all airports. The Company found it necessary to add some 19,000 square feet to its West Trenton factory Approximately 70 percent of the Luscombes go directly to private flyers and the balance are kept by operators for instructional purposes Seaplanes compose about four percent of Luscombe's production During 1940 the Silvaire was introduced, which is powered with a 75 hp. fuel injector engine

Out in Kansas City the Porterfield Aircraft Corporation built 235 ships, a great increase over 1939 production All of these airplanes were tandem trainers, most of which were used in the Civilian Pilot Training Program During the year some 22,000 square feet of floor space was added to the factory and nearly that much again will be added this spring

Stinson built 282 civil planes during the year: 260 of the 105 model, and 22 Reliants Production was disturbed when the factory was moved from Wayne, Mich to the large new factory at Nashville Just after production had been nicely begun in the new plant, the company was taken over by Vultee In order to speed up the Stinson military models it was decided to move the building of commercial planes back to Michigan However, with new machinery and more efficient production methods, the company is looking forward to a big year in 1941

Waco built some 266 airplanes during the year, of which number 229 were trainers Fairchild built 142 ships not counting its military production. Of these civil planes, 97 were the popular four place cabin ships and 45 were two-place trainers Ryan production is now almost entirely devoted to military planes The Air Corps and the Navy are also taking the great bulk of the Beechcrafts which are coming out of Wichita The Company is not neglecting its commercial orders however, and last year 26 commercial biplanes were built and 7 twin-engine monoplanes

1940 Civil Plane Production By Engine Horsepower

50 hp and less, 1 engine	336
2 engines	1
51–70 hp 1 engine	4816
71–100 hp, 1 engine	1041
101–165 hp 1 engine	176
166–225 hp 1 engine	297
2 engines	13
226–300 hp 1 engine	36
301–600 hp 1 engine	61
2 engines	14
601–1000 hp 1 engine	1
Multi engines	136
Unclassified	42
Total single engine	6464
Total multi engines	164
Grand total	6670

Rearwin built 90 airplanes and 101 Ken-Royce engines in its Kansas City plant. Cessna Aircraft Company of Wichita reports its plane output was approximately $900,000 Other plants building civil planes also had considerable increases over 1939

Civilian Pilot Training Program

The great expansion in civil aviation last year can be traced directly to the government-sponsored pilot training program During the year over 25,000 young men and women learned to fly under C P T P auspices and by the end of the year an additional 15,000 were nearing the completion of their courses This government program has brought activity to airports throughout the country and has given impetus to all private flying Many civilians have learned to fly on their own initiative because of activity stirred up by C.P.T. students The lightplane boom could never have developed if fixed-base operators had not been able to buy airplanes to teach the thousands of civilian students to fly

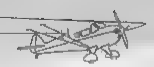
The number of active pilots increased from 31,829 on January 1, 1940 to some 65,000 at the end of the year In 1935 there were only 14,000 certified pilots and the growth was steady through 1939 but then practically doubled in one year There should be an even greater growth this year and the influence on the builders of light airplanes will be far reaching

Production in 1940 by types of airplanes, as reported by the Civil Aeronautics Administration, is as follows 1-2 place single-engine ships 5468, multi-engine 2, 3-5 place single-engine 978, multi-engine 14, 6-20 place multi-engine 28 22 place and over 119 Single-engine seaplanes 17 Single-engine amphibians 1, multi-engine amphibians 1 Unclassified 42 Total single-engine airplanes 6464 Total multi-engine planes 164 Grand total 6670 It is estimated that about 200 more planes were built than this figure

Greatest single factor in private plane boom has been the thousands of new pilots taught through the Civilian Pilot Training Program.

AVIATION'S

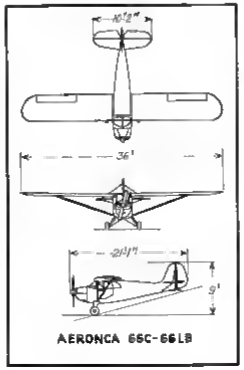
AIR SHOW-IN-PRINT



in a year when aviation facts and information are of vital national importance, Aviation's editors have devoted months of fact-gathering and research to the task of organizing the complete and up-to-date data required by the thousands of men engaged in all branches of aviation activity in this, the 8th Annual Directory Number.

More than 100 current airplanes and engines are illustrated by photographs and three-view drawings, accompanied by detail sketches and the most pertinent specifications. Supplementing these are complete specifications for all planes and engines in production—published in table form for greatest use. A greatly expanded section of Aviation's Sketchbook of Design Detail, with eutaway drawings of latest planes, also is presented.

Several distinct directory sections are included. The first presents the plane and engine manufacturers, their distributors, factory representatives and agents. The second is an alphabetical listing of accessory and material manufacturers and subcontractors. This listing is also presented in another form in which the companies are classified by the types of products that they manufacture. Approved schools and their personnel and certified repair stations also are listed.



AERONCA 65C-65LB

SPECIFICATIONS. Span 36 ft., overall length 21 ft. 3 in., height overall 9 ft., landing gear tread 72 in.; wing loading 7.4 lb. per sq. ft., power loading 19.23 lb. per hp., weight empty 720 lb., gross weight 1250 lb. The Model 65CA is powered by a Continental engine and the Model 65LB is powered by a Lycoming engine, both rated at 65 hp. at sea level. The fuel capacity is 17 gallons, normal range of 350 miles, fuel consumption at cruising speed is 4.3 gallons per hour for the CA and 4 for the LB. Diameter of the propeller is 70 in. for CA and 70 for LB. Area of wing (including allerons) 160 sq. ft., total ailerons 19.8 sq. ft., fin 6.5 sq. ft., rudder 8.2 sq. ft., stabilizer 13.6 sq. ft., total elevators 11.54 sq. ft. Seats two.

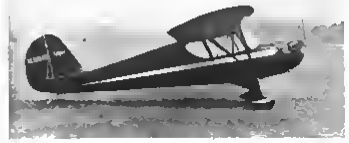
PERFORMANCE. High speed 109 m.p.h. at sea level, cruising speed, 100 m.p.h. at sea level, stalling speed 38 m.p.h., climb at sea level 600 ft. per minute, service ceiling 15,000 ft.

CONSTRUCTION MATERIAL. Wing is made of solid spruce spars, spruce ribs, fabric covering. Fuselage is of steel tubing welded, with fabric covering.

Tail Wheel

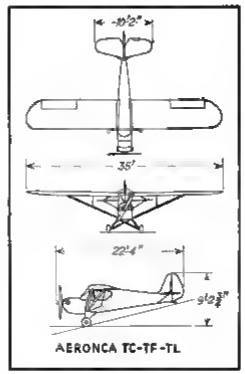
STANDARD EQUIPMENT includes air speed indicator tachometer, oil pressure gage and oil temperature gauge, ignition switch, primer, parking brake, fuel valve, carburetor heater and recessed cabin heater controls for safety.

A. T. C. No. 675 (65CA) No. 702 (65LB)



AERONCA Model 65CA and LB

(For further specifications see table p. 102)



AERONCA TC-TF-TL

SPECIFICATIONS. The span is 35 ft., overall length 22 ft. 4 in., overall height 6 ft. 9 in., landing gear tread 70 in. Wing loading 6.8 lb. per sq. ft., power loading 17.7 lb. per hp. weight empty 700 lb., gross weight 1,150 lb. Model TL is powered by a 65 hp. Lycoming engine. Model TC with a Continental and Model TF with a Franklin with the horsepower being developed at sea level altitude. 12 gallon fuel capacity, normal range of 250 miles, fuel consumption at cruising speed 4 gallons per hour. Propeller measures 70 in. in diameter. Wing area (including ailerons) 160 sq. ft., total ailerons 19.7 sq. ft., fin 6.5 sq. ft., rudder 8.2 sq. ft., stabilizer 13.6 sq. ft., total elevators 11.54 sq. ft. Seats 2.

PERFORMANCE of this model at sea level high speed 100 m.p.h., cruising speed 90 m.p.h., stalling speed 35 m.p.h., climb at sea level 600 ft. per minute, service ceiling 15,000.

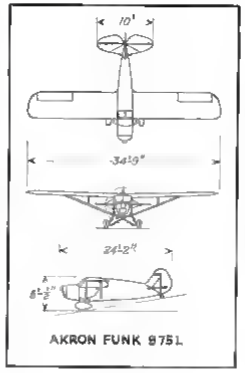
Aileron Control

A. T. C. No. 728

AERONCA Model 65TL

CONSTRUCTION MATERIAL. Spars are of solid spruce, aluminum ribs wing covered with fabric material. The fuselage is of welded steel tubing fabric covered. The landing gear is of fixed type. Shinn wheel, 6.00 x 6, Shinn mechanical brakes. Oleo shock unit and skid and wheel tail unit.

(For further specifications see table p. 103)



AKRON FUNK 875L

SPECIFICATIONS. The span is 35 ft., overall length 20 ft., overall height 6 ft., landing gear tread 72 in., Wing loading 8 lb. per sq. ft., power loading 18 lb. per hp., weight empty 800 lb., gross weight 1,350 lb. It is powered by a Lycoming engine rated at 75 hp. at sea level. Fuel capacity 16 gallons, normal range of 350 miles, fuel consumption at a cruising speed of 4.5 gallons per hour. Propeller diameter is 76 inches. Wing area (including ailerons) is 160 sq. ft., total ailerons 19 sq. ft., fin 4.5 sq. ft., rudder 6.94 sq. ft., stabilizer 15.2 sq. ft., total elevators 10 sq. ft. Seats two.

PERFORMANCE. High speed is 112 m.p.h. at sea level, 103 m.p.h. cruising speed at sea level. Stalling speed 37 m.p.h., 800 ft. per minute climb at sea level, 17,000 ft. service ceiling.

CONSTRUCTION MATERIAL. The wing spars are of laminated spruce, spruce ribs, and covered with fabric. Firestone landing gear wheels. Shinn mechanical brakes. Oleo landing gear shock unit and tail unit.

Engine Mount

A. T. C. No. 715

AKRON FUNK Model 875L

STANDARD EQUIPMENT consists of tachometer, air speed indicator, oil pressure gauge and oil temperature gage, battery and ease navigation lights. Special electric starter radio receiver and transmitter, turning and banking indicator, and landing lights.

(For further specifications see table p. 105)

APPLEGATE Amphibian Model P- No. 1

SPECIFICATIONS: The span is 38 ft. 6 in. overall length 25 ft., overall height 8 ft., landing gear tread 58 in. Wing loading weight is 8.68 lb per sq. ft., power loading 10.8 lb per hp., weight empty 998 lb., gross weight 1500 lb. It is powered with a Franklin 199 engine, rated at 95 hp. at sea level, fuel capacity 33 gallons, normal range of 500 miles, fuel consumption at a cruising speed of 6 gallons per hour. The propeller measures in diameter 72 in. Wing (including ailerons) 183 sq. ft., total ailerons 16.2 sq. ft., fin 4.06 sq. ft., rudder 6.73 sq. ft., stabilizer 14.66, total elevators 10.64 sq. ft.

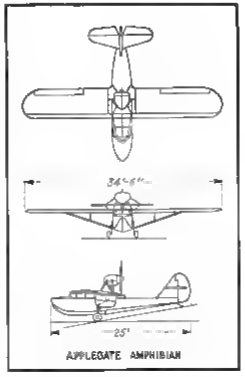
PERFORMANCE: High speed 102 m.p.h. at sea level, cruising speed of 85 m.p.h. at sea level, stalling speed 45 m.p.h., climb at sea level 450 ft.-per minute, service ceiling 11,000 ft. Wing spars are of spruce, N'eral ribs, covered with fabric. Fuselage is aluminum alloy 525. The landing gear, skid tail unit.

STANDARD EQUIPMENT: Consists of Cub tires and brakes, Gardner propeller, Cub seats controls lights, Applegate shock strut, Pneumatic wing tip floats. Seats two.

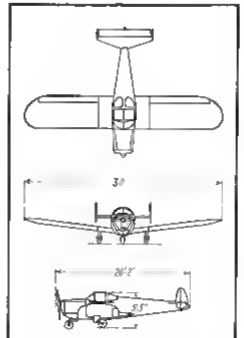
(For further specifications see table p. 105)

Engine Mount

N.A.T.C



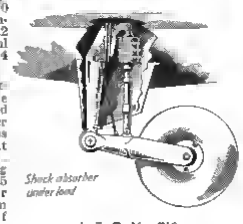
APPLEGATE AMPHIBIAN



ERCOUPE 415-C

SPECIFICATIONS: The span is 30 ft., overall length 20 ft. 2 in., overall height 5 ft. 11 in., landing gear tread 84 in., wing loading 8.2 lb. per sq. ft., power loading 18.1 lb. per hp., weight empty 716 lb., gross weight 1,175 lb. this model is powered by a Continental engine rated at 65 hp. at sea level, fuel capacity 14 gallons, normal range 350 miles, fuel consumption at cruising speed 4 gallons per hour, diameter of propeller 72 in., area of wing (including ailerons) 142.6 sq. ft., total ailerons 16.8 sq. ft. 6x 3.3 sq. ft. rudder 6.9 sq. ft., stabilizer 10.2 sq. ft. total elevators 9.4 sq. ft.

PERFORMANCE: The high speed performance is 117 miles per hour at sea level, cruising speed 105 miles per hour at an altitude of 3,000 ft.



Shock absorber under hood

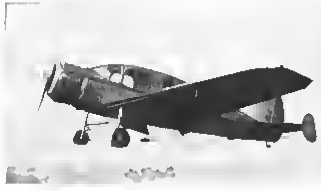
A.T.C. No. 718

ENGINEERING & RESEARCH Model Ercoupe 415-C

stalling speed 40 miles per hour, climb at sea level 800 ft. per minute, service ceiling 14,000 ft. Seats 4.

CONSTRUCTION MATERIAL: The wing spars are of Alcoumium Alloy, I" section; the ribs are of aluminum alloy, the covering material is of aluminum alloy and fabric, fuselage is aluminum alloy monocoque type.

(For further specifications see table p. 105)



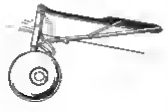
BELLANCA Model No. 14-9 Cruisair

SPECIFICATIONS: The span is 34 ft. 2 in., length overall 21 ft. 3 in., height overall 6 ft. 3 in., landing gear tread 8 ft. 9 in. Wing loading 10.8 lb. per sq. ft., power loading 10.4 lb. per hp., weight empty 1050 lb., gross weight 1750 lb. This model is powered by a Kenn-Royce or LeBlond engine, rated at 90 hp., fuel capacity 20 gallons, normal range of 420 miles, fuel consumption at cruising speed 5 gallons per hour. The propeller diameter is 74 inches. Wing (including ailerons) 162 sq. ft., total ailerons 14 sq. ft., fin 6.5 sq. ft., rudder 5.8 sq. ft., stabilizer 16.07 sq. ft., total elevators 9.36.

PERFORMANCE: High speed 133 m.p.h., cruising speed 120 m.p.h. at an altitude of 5,000 ft. Stalling speed 45 m.p.h., climb at sea level 750 ft. per minute, service ceiling 14,000 ft.

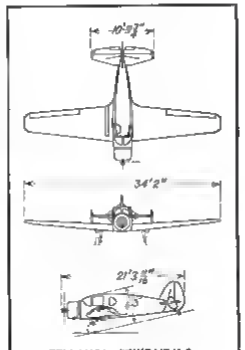
CONSTRUCTION MATERIAL: The wing spars are of spruce plank, ribs of spruce plywood, covered with plywood. Steel tubing with fabric covering is used for the fuselage. The landing gear is of retractable type, wheels measure 8.00 x 4. Goodrich and Palmer hydraulic brakes. Oleo landing gear shock unit, Oleo wheel tail unit. Plexiglas is used for cock pit enclosures, landing-light covers, and other transparent sections. Seats 3.

(For further specifications see table p. 105)

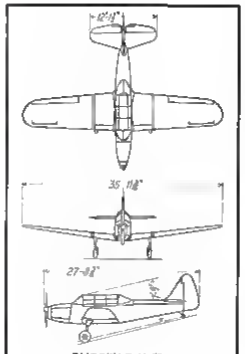


Retractable Gear

A.T.C. No. 716



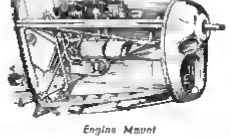
BELLANCA CRUISAIR M-9



FAIRCHILD M-62

SPECIFICATIONS: The span is 36 ft., overall length 27 ft. 8 in., overall height 7 ft. 9 in., landing gear tread 115 in., wing loading 12.25 lb. per sq. ft., power loading 14.0 lb. per hp., weight empty 1,749, gross weight 2,450 lb., the model is powered by a Ranger engine at a total rate of 175 hp. at sea level, fuel capacity 45 gallons, normal range 550 miles, fuel consumption at cruising speed 10 gallons per hour, diameter of propeller 86 in., area of wing (including ailerons) 200 sq. ft., total ailerons 16.8 sq. ft., fin 6.9 sq. ft., rudder 14.5 sq. ft., stabilizer 26.7 sq. ft., total elevators 13.2 sq. ft. Seats 2.

PERFORMANCE: The high speed is 140 m.p.h. at sea level, cruising speed 120 m.p.h. at sea level, stalling speed 50 m.p.h., climb at sea level 835 ft. per minute, service ceiling 16,000 ft.



Engine Mount

A.T.C. No. 724

FAIRCHILD Model M-62

CONSTRUCTION MATERIAL: Solid spruce wing spars, aluminum alloy ribs, plywood covering material. The landing gear is of fixed type, hydraulic brakes, Oleo shock unit, wheel tail unit, the fuselage is of welded steel tubing, fabric covered.

(For further specifications see table p. 105)

CULVER Model LCA

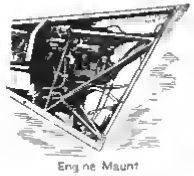
SPECIFICATIONS: Span is 27 ft., overall length is 17 ft. 8 in., overall height is 5 ft. 6 in., the landing gear tread is 79 in., wing loading 10.88 lb. per sq. ft., power loading 17.40 lb. per hp., weight empty 750 lb., gross weight 1,305 lb. It is powered by a Continental engine, total rated hp. is 75 at sea level, fuel capacity is 20 gallons, normal range 600 miles, fuel consumption at cruising speed 4.35 gallons per hour.

PERFORMANCE: High speed 140 miles per hour at sea level, cruising speed 120 miles per hour at sea level, stalling speed 45 miles per hour, climb at sea level 800 ft. per minute, service ceiling 17,500 ft. Seats two.

CONSTRUCTION MATERIAL: The spars are of laminated spruce, wood ribs, fabric covering material, the landing gear is of retractable type. Haves wheel, size 500 x 4. Haves hydraulic brakes, Culver Oleo-spring landing gear shock unit, wheel tail unit, fuselage semi-monocoque.

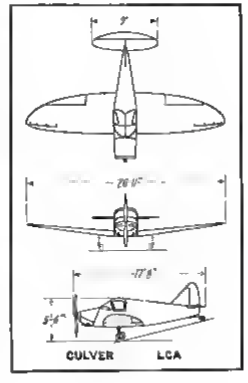
STANDARD EQUIPMENT: Oil pressure gage, oil thermometer, air-speed altimeter, compass, ignition switch, fuel level gage, cabin heat, cabin vent, landing lights, generator, battery, position lights.

(For further specifications see table p. 105)

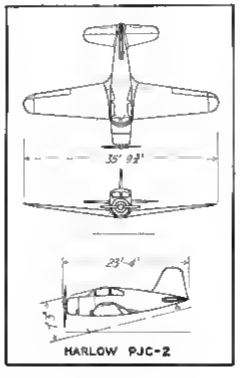


Engine Mount

A.T.C. No. 730



CULVER LCA



HARLOW PJC-2

SPECIFICATIONS: The model PJC-2 is available as 2 or 4 seater specifications for latter follow: span 35 ft. 9¾ in., overall length 23 ft. 4 in., overall height 7 ft. 3 in., wing loading 14.05 lb. per sq. ft., power loading 15.94 lb. per hp., weight empty 1,750 lb., gross weight 2,600 lb. It is powered with a Warner engine rated at 145 hp. at sea level, fuel capacity 34 gal., cruising range 480 mi., cruising fuel consumption 9 gal. per hour, propeller diameter 84 in. Wing area (including ailerons) 185 sq. ft., aileron area (total) 13.02 sq. ft., fin area 12.58 sq. ft., rudder area 10.91 sq. ft., stabilizer area 21.2 sq. ft., total elevator area 17.13 sq. ft.

PERFORMANCE: High speed 140 m.p.h. at sea level, cruising speed 135 m.p.h., stalling speed 52 m.p.h., climb at sea level 650 ft. per min., service ceiling 12,000 ft.

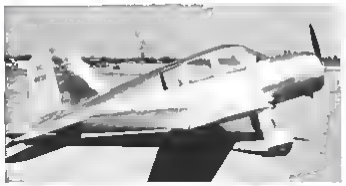
CONSTRUCTION: Aluminum alloy wing spars, metal ribs, aluminum alloy covering material, retractable landing gear, 21 in. wheels, hydraulic brakes, Aircraft Products Oleo shock struts, wheel tail unit, riveted, Alclad fuselage. Seats 2.

STANDARD EQUIPMENT: Pioneer Sperry Jocger, Auto-Lite and Weston instruments, Lord shock mountings, General tires, Air Associates brakes, Curtiss propeller, Harlow seats, Fafnir and Norma Hoffman bearings, Auto-Lite generator and starter. Radio equipment: R.C.A., Lear, Siebenthaler and Aeronaut.

HARLOW Model No. PJC-2

(For further specifications see table p. 105)

A.T.C. No. 689



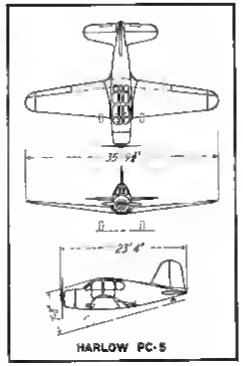
HARLOW Model PC-5

SPECIFICATIONS: Span 35 ft., 9¾ in., overall height 7 ft. 8 in., overall length 23 ft. 4 in., landing gear tread 91 in., wing loading 14.05 lb. per sq. ft., power loading 15.75 lb. per hp., waught empty 1,950 lb., gross weight 2,600 lb., powered by a Warner engine, total rated hp. 165 at sea level, fuel capacity 34 gallons, normal range 480 miles, fuel consumption at cruising speed 10 gallons per hour, diameter of propeller 84 in., wing area (including ailerons) 185 sq. ft., total aileron area 13.62 sq. ft., fin area 12.58 sq. ft., rudder area 10.9 sq. ft., stabilizer area 21.2 sq. ft., total elevator area 17.12 sq. ft. Seats two. PERFORMANCE: High speed 154 m.p.h. at sea level, cruising speed 140 m.p.h. at sea level, stalling speed 52 m.p.h., climb at sea level 740 ft. per minute, service ceiling 13,500 ft. CONSTRUCTION MATERIAL: Aluminum alloy wing spars, metal ribs, aluminum alloy covering material, retractable type of landing gear, 21 in. streamlined General wheels, hydraulic brakes, Aircraft Products Ltd. landing gear shock unit, wheel tail unit, Alclad riveted fuselage. STANDARD EQUIPMENT: Airspeed, sensitive altimeter, tachometer, engine gage unit, fuel gage, compass, clock, rate of climb.

Landing Gear

(For further specifications see table p. 105)

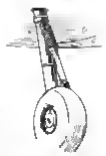
No. A. T. C.



HARLOW PC-5

HOWARD Model DGA-12S

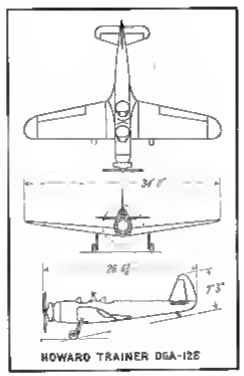
SPECIFICATIONS: Span 34 ft., overall length 25 ft. 0¾ in., overall height 7 ft. 3 in., wing loading 11.14 lb. per sq. ft., power loading 16 lb. per hp., weight empty 1,850 gross weight 2,900 lb., landing gear tread 113½ in., powered by a Warner engine, total rated hp. 125, fuel capacity 31 gallons, normal range 365 miles, fuel consumption at cruising speed 8.3 gallons per hour, diameter of propeller 87½ in., wing area (including aileron) 179.5 sq. ft., total aileron area 20.2 sq. ft., fin area 9.2 sq. ft., rudder area 6.7 sq. ft., stabilizer area 10.7 sq. ft., total elevator area 11.9 sq. ft. Seats two. PERFORMANCE: High speed 118 m.p.h., at sea level, cruising speed 108 m.p.h., at sea level, stalling speed 50 m.p.h., climb at sea level 890 ft. per minute, service ceiling 13,500 ft. CONSTRUCTION MATERIAL: Box spruce wing spars, plywood covering material, ribs mahogany and spruce truss and mahogany webbing, fixed type landing gear, General wheel, size 8.00 x 5, General hydraulic brakes, wheel tail unit, fuselage constructed of welded steel fabric covering.



Landing Gear

(For further specifications see table p. 105)

No. A. T. C.

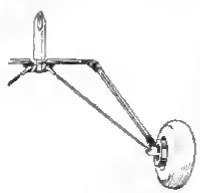


HOWARD TRAINER DGA-12S

INTERSTATE AIRCRAFT AND ENGINEERING

Model S-1A

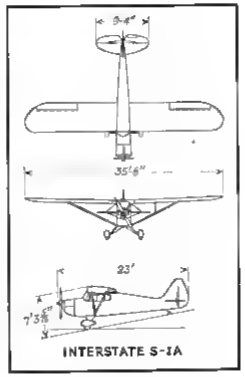
SPECIFICATIONS: The span is 35 ft. 6 in. overall length 23 ft. 2 in., overall height 7 ft. 5 in., wing loading 6.9 lb. per sq. ft., power loading 18.5 lb. per hp., weight empty 700 gross weight 1,200 lb. this model is powered by a Continental or Franklin engine with the total rated hp. 65, fuel capacity 15 gallons, normal range 375 miles, diameter of propellor 76 in. Wing area (including ailerons) 173.8 sq. ft., fin 4.7 sq. ft., rudder 7.0 sq. ft., stabilizer 15.0 sq. ft., total elevators 9.8 sq. ft. Seats two. PERFORMANCE: The high speed is 107 m.p.h., cruising speed 97 m.p.h. stalling speed 36 m.p.h., climb at sea level 700 ft. per minute, service ceiling 14,500 ft. CONSTRUCTION MATERIAL: Spruce spars, metal ribs, fabric covering material, the landing gear is of fixed type, Shinn wheel 6.00 x 6, Shinn hydraulic brakes, Interstate oleo landing gear shock unit, tail 6.00 x 2 steerable. STANDARD EQUIPMENT: It is equipped with the following altimeter, airspeed tachometer, oil pressure, oil temperature fuel gage compass.



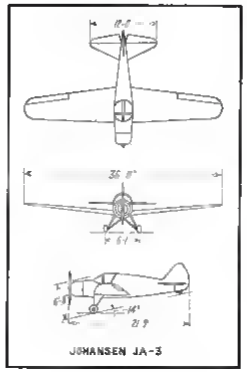
Landing Gear

(For further specifications see table p. 105)

No. A. T. C.



INTERSTATE S-1A



JOHANSEN JA-3

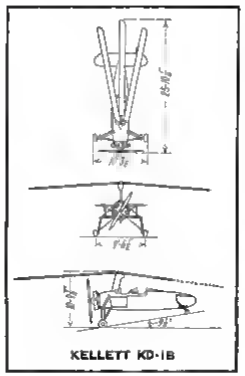
SPECIFICATIONS: The span is 36 ft., overall length 21 ft. 6 in., overall height 6 ft. 8 in., the landing gear tread 73 in., wing loading 6.6 lb. per sq. ft., power loading 18.8 lb. per hp., empty weight 700, gross weight 1,225 lb., this model is powered by a Lycoming engine, total rated hp. 65 at sea level, fuel capacity 15 gallons, normal range 350 miles, fuel consumption at cruising speed 4.0 gallons per hour, diameter of propeller 72 in. The area of wing (including ailerons) is 185 sq. ft., total ailerons 16 sq. ft., fin 6 sq. ft., rudder 6.8 sq. ft., stabilizer 20 sq. ft., total elevators 12.8 sq. ft. Seats two. PERFORMANCE: The high speed is 108 m.p.h., at sea level, cruising speed 96 m.p.h., at sea level, stalling speed 39 m.p.h., climb at sea level 680 ft. per minute, service ceiling 15,000 ft. CONSTRUCTION MATERIAL: Laminated spruce spars, spruce ribs, fabric covering material, the landing gear is of fixed type, air wheels 16 x 7-3 mechanical brakes, shock cord landing gear shock unit, wheel tail unit, fuselage glued spruce plywood. STANDARD EQUIPMENT: It is equipped with the following: air speed tachometer, oil pressure gas gage, altimeter oil temperature.

Engine Mount

No. A. T. C.

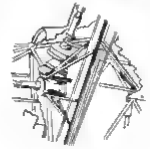
JOHANSEN Model JA-3

(For further specifications see table p. 105)



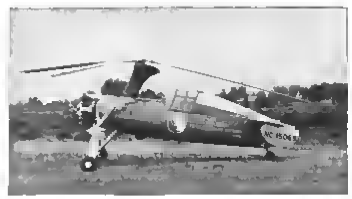
KELLETT KD-1B

SPECIFICATIONS: Span 40 ft., overall length 28 ft. 10 in., overall height 10 ft. 3 in., landing gear tread 114.5 in., wing loading 40.8 lb. per sq. ft., power loading 10 lb. per hp., weight empty 1,030 gross weight 2,250 lb., powered by a Jacobs engine total rated hp. 225 at sea level, fuel capacity 30 gallons, normal range 208 miles, fuel consumption at cruising speed 14.0 gallons per hour, diameter of propeller 102 in., area of wing (including ailerons) 55.2 sq. ft., fin 12.0 sq. ft., rudder 6.2 sq. ft., stabilizer 22.0 sq. ft. Seats one. CONSTRUCTION MATERIAL: Spars are of steel tubing, plywood ribs, fabric covering material. The landing gear is of fixed type, Goodrich wheel 7.00 x 5, Hayes mechanical brakes, Bendix Oleo landing gear shock unit, tail wheel unit, fuselage welded steel tubing, fabric covered.



Rotor Transmission

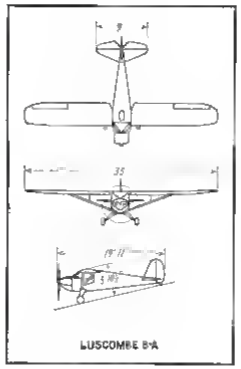
A. T. C. No. 712



KELLETT AUTOGIRO Model KD-1B

PERFORMANCE: High speed 127 m.p.h., cruising speed 102 m.p.h., climb 1,060 ft. per min., service ceiling 14,000 ft. no stalling speed. STANDARD EQUIPMENT: Contains the following: compass, air speed, altimeter, rotor tachometer, engine tachometer, engine gage unit, thermocouple, ammeter, clock.

(For further specifications see table p. 105)



LUSCOMBE 8-A

SPECIFICATIONS: Span 35 ft., length overall 20 ft. height overall 5 ft. 10½ in., landing gear tread 76 in., wing loading 8.6 lb. per sq. ft., power loading 18.5 lb. per hp., weight empty 650, gross weight 1,200 lb. This model is powered by a Continental engine, total rated hp. 65 at sea level fuel capacity 15 gallons, normal range 350 miles fuel consumption at cruising speed 4.25 gallons per hour, diameter of propeller is 76 in., area of wing (including ailerons) 140.0 sq. ft., total ailerons 13.0 sq. ft., fin 4.9 sq. ft., rudder 5.65 sq. ft., stabilizer 13.0 sq. ft., total elevators 8.75 sq. ft. Seats two. PERFORMANCE: High speed 115 m.p.h., at sea level cruising speed 104 m.p.h. at sea level, stalling speed 37 m.p.h. Climb at sea level 900 ft. per minute, service ceiling 15,000 ft. CONSTRUCTION MATERIAL: Spars of aluminum alloy, "I" section, ribs of aluminum alloy, fabric covering material, the landing gear is of fixed type, Firestone 16-6 tires, Shinn mechanical brakes, Alclad monocoque fuselage. STANDARD EQUIPMENT: Contains the following: airspeed tachometer, altimeter, oil temperature gage, compass, (extra)

Landing Gear

A. T. C. No. 694

LUSCOMBE Model 8-A

(For further specifications see table p. 105)

LUSCOMBE Model 8 A Seaplane

SPECIFICATIONS: Span 35 ft., overall length 21 ft. 4 in., overall height 8 ft., wing loading 9.0 lb. per sq. ft., power loading 10.4 lb. per hp., weight empty 701, gross weight 1,260 lb.; this model is powered by a Continental engine, total rated hp. 65 at sea level, fuel capacity 15 gallons, normal range 350 miles, diameter of propeller 76 in., area of wing (including aileron) 140.0 sq. ft., total ailerons area 13.0 sq. ft., fin 4.9 sq. ft., rudder area 5.65 sq. ft., stabilizer area 13.0 sq. ft., total elevators area 8.75 sq. ft., total ailerons area 13.5 sq. ft., fin area 4.1 sq. ft., rudder area 5.8 sq. ft., stabilizer area 10.6 sq. ft., total elevators area 9.2 sq. ft. Seats 2.

PERFORMANCE: High speed 102 m.p.h. at sea level, cruising speed 95 m.p.h. at sea level, stalling speed 40 m.p.h., climb at sea level 650 ft. per minute, service ceiling 10,000 ft. Seats 2.

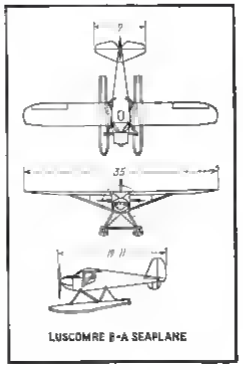
CONSTRUCTION MATERIAL: Spars are of almuminum alloy "I" section, aluminum alloy ribs, fabric covering material, fuselage Alclad monocoque.

STANDARD EQUIPMENT: Contains the following: airspeed tachometer, altimeter, oil temperature gage, compass (extra).

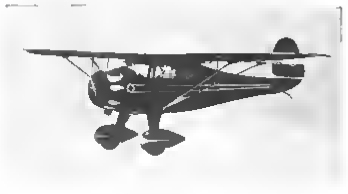
Engine Mount

(For further specifications see table pg. 105)

A. T. C. No. 694



LUSCOMBE 8-A SEAPLANE



MONOCOUPE Model 90 A

SPECIFICATIONS: Span 32 ft., overall length 20 ft. 6 in., overall height 6 ft. 11 in., landing gear tread 87.5 in., Wing loading 12.2 lb. per sq. ft., power loading 17.0 lb. per hp., weight empty 973, gross weight 1,410 lb. Powered by a Lambert engine rated at 90 hp. at sea level, fuel capacity 28 gallons, normal range 600 miles, fuel consumption at cruising speed 4.8 gallons per hr., diameter of propeller 78 in., wing area (including ailerons) 132.2 sq. ft., total ailerons area 13.5 sq. ft., fin area 4.1 sq. ft., rudder area 5.8 sq. ft., stabilizer area 10.6 sq. ft., total elevators area 9.2 sq. ft. Seats 2.

PERFORMANCE: High speed 130 m.p.h., at sea level, cruising speed 110 m.p.h. at sea level, stalling speed 40 m.p.h., climb at sea level 900 ft. per minute, service ceiling 15,000 ft.

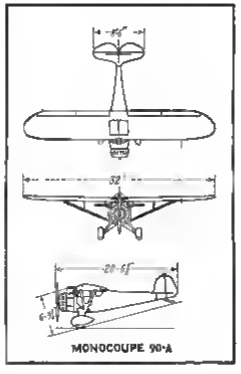
CONSTRUCTION MATERIAL: Spars are of solid spruce, wood ribs, fabric covering material, Ehert Hatch wheels size 6.50 x 10, Ehert Hatch mechanical brakes, shock cord landing gear unit, fuselage of welded steel tubing with fabric covering.

STANDARD EQUIPMENT: This model is equipped with the following instruments: airspeed, altimeter, oil temperature; Airpath Instituta compass; Aeromarine tachometer.

Steerable Tail Wheel

(For further specifications see table pg. 105)

A. T. C. No. 306



MONOCOUPE 90-A

NAUGLE Model Mercury N-1

SPECIFICATIONS: Span 30 ft., overall length 21 ft. 8 in., overall height 6 ft. 8 in., the landing gear tread 84 in., wing loading 8.5 lb. per sq. ft., power loading 13.3 lb. per hp., empty weight 610, gross weight 1,150 lb. It is powered by a Lycoming engine, total rated hp. 75 at sea level, fuel capacity 15 gallons, normal range 450 miles, fuel consumption at cruising speed 4.6 gallons per hr., diameter of propeller 72 in., wing area (including ailerons) 125 sq. ft., total ailerons area 14 sq. ft., fin area 5.1 sq. ft., rudder area 6.8 sq. ft., stabilizer area 13.5 sq. ft., total elevators area 8.8 sq. ft. Seats two.

PERFORMANCE: High speed 145 m.p.h., at sea level, cruising speed 130 m.p.h. at sea level, stalling speed 45, climb at sea level 1,200 ft. per minute, service ceiling 20,000 ft.

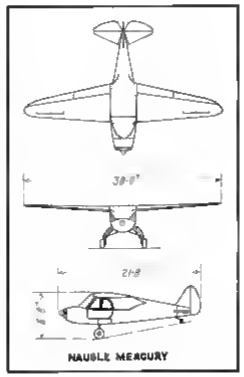
CONSTRUCTION MATERIAL: Alclad wing spars, aluminum alloy ribs, fabric covering material, fixed landing gear, Shimo hydraulic brakes, shock cord unit, Firestone wheels 6.00 x 6, fuselage monocoque Alclad.

STANDARD EQUIPMENT: This model is equipped with the following instruments: air speed, sensitive altimeter, oil pressure, oil temperature, gages, compass, tachometer.

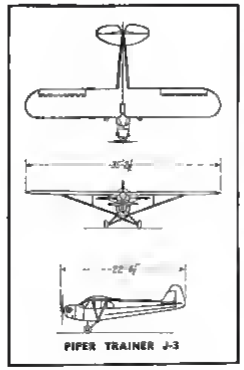
Wing Spar Construction

(For further specifications see table pg. 105)

No. A. T. C.



NAUGLE MERCURY



PIPER TRAINER J-3

SPECIFICATIONS: Span 35 ft. 2½ in., length overall 22 ft. 5 in., height overall 6 ft. 8 in., landing gear tread 71 in. Wing loading 5.6 lb. per sq. ft., power loading 25 lb. per hp., weight empty 574 lb., gross weight 1,000 lb. It is powered by a Continental A-40 engine. Total rated hp. 40 at sea level, fuel capacity 6 gal., normal range 200 mi., fuel consumption at cruising speed 3 gal. per hr., propeller diameter 69 in. Wing area (including ailerons) 178.5 sq. ft., aileron area (total) 19.2 sq. ft., fin area 4.02 sq. ft., rudder area 6.55 sq. ft., stabilizer 14.65 sq. ft., total elevator area 10.64 sq. ft.

PERFORMANCE: High speed 85 m.p.h. at sea level, cruising speed 70 m.p.h. at sea level, stalling speed 38 m.p.h., climb at sea level 400 ft. per min., service ceiling 10,000 ft. Seats 2.

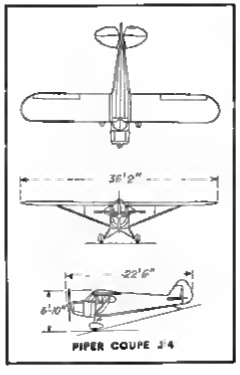
CONSTRUCTION MATERIAL: Wings have solid spruce spars, aluminum alloy ribs, fabric covering. Fixed landing gear, Hayes wheel 8.00 x 4, Rusco landing gear shock unit, solid tail unit, welded steel tubing with fabric covered fuselage.

STANDARD EQUIPMENT: Instruments: Aeromarine airspeed, Aeromarine altimeter, Waltham tachometer, U. S. Gauge Co. oil pressure, U. S. Gauge Co. oil temperature, Goodrich tires, Sensenich propeller, Rusco shock cord. This model is powered also by either Franklin or Lycoming 50 hp., or Continental 50, 60 and 75 hp. engines.

A. T. C. No. 660

PIPER Model J-3 Trainer

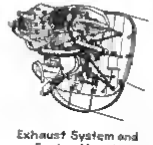
(For further specifications see table pg. 105)



PIPER COUPE J-4

SPECIFICATIONS: The span is 36 ft. 2 in., overall length 22 ft. 6 in., overall height 6 ft. 10 in., the landing gear tread 77 in., wing loading 7.1 lb. per sq. ft., power loading 20.0 lb. per hp., empty weight 800, gross weight 1,301 lb. This model is powered by a Lycoming O-145 engine, rated hp. 65 at sea level, fuel capacity 16 gallons, normal range 382 miles, fuel consumption at cruising speed 4.0 gallons per hr., diameter of propeller 70 in., area of wing (including ailerons) is 183.0 sq. ft., total ailerons 19.2 sq. ft., fin 4.66 sq. ft., rudder 6.76 sq. ft., stabilizer 14.66 sq. ft., total elevators 10.64 sq. ft. Seats 2.

PERFORMANCE: High speed 100 m.p.h., at sea level, cruising speed 87 m.p.h. at sea level.



Exhaust System and Engine Mount

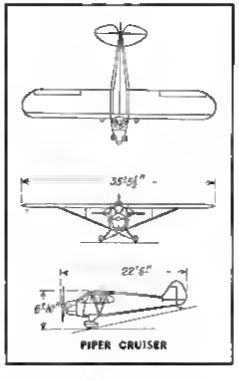
A. T. C. No. 721

PIPER Model J-4 Coupe

Stalling speed 41 m.p.h., climb at sea level 600 ft. per minute, service ceiling 12,000 ft.

CONSTRUCTION MATERIAL: Solid spruce spars, aluminum alloy ribs, fabric covering material, fixed type landing gear, Hayes 8.00 x 4, Palmer hydraulic brakes. Oleo landing gear shock unit, fuselage steel tubing welded with fabric covering.

(For further specifications see table pg. 105)



PIPER CRUISER

SPECIFICATIONS: Span 35 ft. 5½ in., overall length 22 ft. 6 in., overall height 6 ft. 10 in., landing gear tread 74½ in., wing loading 8.1 lb. per sq. ft., power loading 19.4 lb. per hp., empty weight 750, gross weight 1,450 lb., powered by an A-75 Continental or Lycoming geared O-145 engine, total rated hp. 75, at sea level, fuel capacity 18 gallons, normal range 320 miles, fuel consumption at cruising speed 4.6 gallons per hour. Diameter of propeller 72 in., with Continental model. Area of wing (including ailerons) 179 sq. ft., total ailerons area 19.2 sq. ft., fin area 4.02 sq. ft., rudder area 6.76 sq. ft., stabilizer area 14.65 sq. ft., total elevator area 10.64 sq. ft. Seats 3.

PERFORMANCE: High speed 100 m.p.h. at sea level, cruising speed 87 m.p.h. at sea level, stalling speed 42 m.p.h., climb at sea level 450 ft. per minute, service ceiling 10,000 ft. Continental powered.

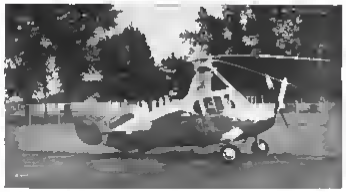
CONSTRUCTION MATERIAL: Solid spruce wing spars, aluminum alloy ribs, fabric covering material, fixed type of landing gear, Hayes wheel size 8.00 x 4, Palmer hydraulic brakes, Rusco landing gear shock unit, fuselage constructed of welded steel tubing, fabric covering.

A. T. C. No. 725

PIPER Model J-5 Cruiser

STANDARD EQUIPMENT: Aeromarine airspeed, Aeromarine altimeter, U. S. Gauge Co. oil pressure and oil temperature instruments, Airpath Institute Co. compass, Waltham tachometer, Cub and Goodrich tires, hydraulic brakes.

(For further specifications see table pg. 105)



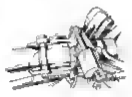
FITCAIRN Model PA 36

SPECIFICATIONS: Span 43 ft., overall length 20 ft. 6 in., overall height 10 ft. 3½ in., landing gear tread 84 in., wing loading 142 lb. per sq. ft., power loading 11.7 lb. per hp., weight empty 1,425, gross weight 2,050 lb., this model is powered by a Warner engine with total rated hp. 175 at sea level, fuel capacity 36 gallons, normal range 375 miles, fuel consumption at cruising 10 gallons per hour, diameter of propeller 92 in., area of motor disc is 1.452 sq. ft. Ea 24.4 sq. ft., rudder 5.2 sq. ft., stabilizer 12.4 sq. ft., total elevators 5.4 sq. ft. Seats two.

PERFORMANCE: High speed 121.7 m.p.h. at sea level, cruising speed 102 m.p.h. at sea level, stalling speed 0.0 m.p.h., climb at sea level 805 ft. per minute, service ceiling 15,000 ft.

CONSTRUCTION MATERIAL: Steel tubing spars, plywood ribs, plywood covering material, Oleo type landing gear, Beadix wheel 20 x 4, Beadix hydraulic brakes, Beadix Oleo landing gear shock unit and tail unit.

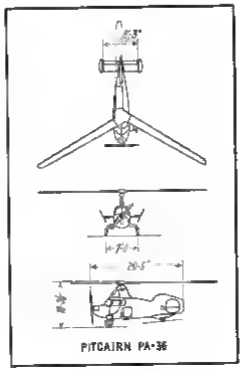
STANDARD EQUIPMENT: This model contains the following equipment: engine tachometer, oil temperature and pressure gages, airspeed indicator, altimeter, compass, electric rotor tachometer.



Rotor Blade Hub

(For further specifications see table p. 105)

No. A.T.C.



FITCAIRN PA-36

PORTERFIELD Model LP-65

SPECIFICATIONS: Span 34 ft. 3 in., overall length 22 ft. 7 11/16 in., overall height 7 ft., landing gear tread 69 in., wing loading 6.9 lb. per sq. ft., power loading 17.9 lb. per hp., weight empty 675, gross weight 1,160 lb., this model is powered by a Lycoming engine total rated hp. 65 at sea level, fuel capacity 13.5 gallons, normal range 290 miles, fuel consumption at cruising speed 4.5 gallons per hr., diameter of propeller 69 in., wing (including ailerons) 168.8 sq. ft., total ailerons 19.1 sq. ft., fin 6.38 sq. ft., rudder 6.84 sq. ft., stabilizer 10.57 sq. ft., total elevators 11 sq. ft. Seats two.

PERFORMANCE: High speed 100 m.p.h., cruising speed 98 m.p.h., stalling speed 33 m.p.h., climb 560 ft. per min., service ceiling 15,000 ft.

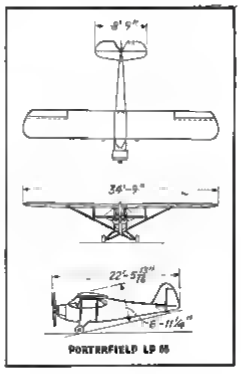
CONSTRUCTION MATERIAL: Spruce wing spars, spruce ribs, fabric covering material, Shinn wheel 6.00.6, mechanical Shinn brakes, welded steel tubing fuselage with fabric covering.

STANDARD EQUIPMENT: Steerable tail wheel, dual controls, tachometer, altimeter, airspeed, oil temperature, pressure gages, outside air drain, outside fuel drain, dual fuel shutoff.

(For further specifications see table p. 105)

Landing Gear Bracing

A.T.C. No. 720



PORTERFIELD LP-65

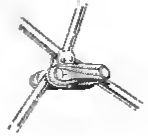
PORTERFIELD Model 90

SPECIFICATIONS: Span 22 ft., overall length 20 ft. 3 in., overall height 6 ft. 8¾ in., landing gear tread 69.5 in., wing loading 9.0 lb. per sq. ft., power loading 14.7 lb. per hp., weight empty 826 lb., gross weight 1,326 lb., powered by a Warner engine with total rated hp. 90 at sea level, fuel capacity 18 gallons, normal range 330 miles, fuel consumption at cruising speed 6.5 gallons per hour, diameter of propeller 80 in., wing area (including ailerons) 147 sq. ft., total ailerons 17.16 sq. ft., fin 5.16 sq. ft., rudder 6.33 sq. ft., stabilizer 13.2 sq. ft., total elevators 9.85 sq. ft. Seats two.

PERFORMANCE: High speed 133 m.p.h., at sea level, cruising speed 120 m.p.h., at sea level, stalling speed 40 m.p.h., climb at sea level 1050 ft. per minute, service ceiling 20,000 ft.

CONSTRUCTION MATERIAL: Spruce wing spars, spruce ribs, fabric covering material, Shinn wheel 6.00.6, mechanical Shinn brakes, welded steel tubing, fabric fuselage.

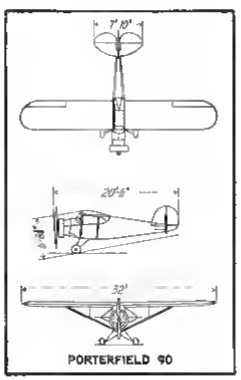
STANDARD EQUIPMENT: Airspeed indicator, oil temperature, oil pressure gages, tachometer, altimeter, compass, dual brakes, navigation lights, steerable tail wheel, shock covers.



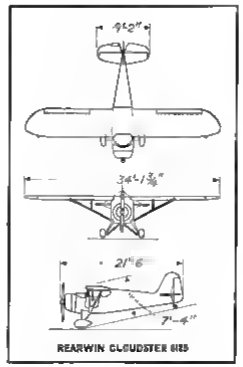
Shock Absorber

(For further specifications see table p. 105)

A.T.C. No. 611



PORTERFIELD 90



REARWIN CLOUDSTER 8125

SPECIFICATIONS: Span 34 ft. 1⅜ in., overall length 21 ft. 6 in., overall height 7 ft. 4 in., landing gear tread 80 in., wing loading 10.73 lb. per sq. ft., power loading 14.35 lb. per hp., weight empty 1,070, gross weight 1,734 lb. This model is powered by a Ken Rayce engine, total rated hp. 120 at sea level, fuel capacity 24 gallons, normal range 625 miles, fuel consumption at cruising speed 7 gallons per hour, area of wing (including ailerons) 161.8 sq. ft., total ailerons 13.13 sq. ft., fin 8.35 sq. ft., rudder 5.75 sq. ft., stabilizer 13.94 sq. ft., total elevators 11.56 sq. ft. Seats two.

PERFORMANCE: High speed 145 m.p.h., at an altitude of 800 ft., cruising speed 125 m.p.h. at an altitude of 800 ft., stalling speed 48 m.p.h., climb at sea level 1,000 ft. per minute, service ceiling 17,000 ft.

CONSTRUCTION MATERIAL: Wing spars are of

A.T.C. No. 711

REARWIN Model Cloudster 8125

solid spruce, spruce ribs, fabric covering material, landing gear is of fixed type, Goodyear wheels 18 x 8.3, Goodyear mechanical brakes, hydraulic landing gear shock unit, wheel tail unit, fuselage is of welded steel tubing, fabric covered.

STANDARD EQUIPMENT: This model contains the following instruments: tachometer, airspeed, oil pressure, oil temperature gages, altimeter, compass, switch.

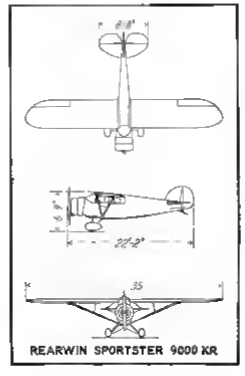
(For further specifications see table p. 105)

REARWIN Model Sportster 9000KR

SPECIFICATIONS: Span 35 ft., overall length 22 ft. 3 in., overall height ft. 9 in., landing gear tread 72 in., wing loading 8.8 lb. per sq. ft., power loading 16.2 lb. per hp., empty weight 830, gross weight 1,460, this model is powered by a Ken Rayce engine total rated hp. 90 at sea level, fuel capacity 24 gallons, normal range 500 miles, fuel consumption at cruising speed 5.0 gallons per hour, diameter of propeller 76 in., area of wing (including ailerons) is 166 sq. ft., total ailerons 19.75 sq. ft., fin 5.17 sq. ft., rudder 6.92 sq. ft., stabilizer 15.04 sq. ft., total elevators 12.12 sq. ft. Seats two.

PERFORMANCE: The high speed is 125 m.p.h. at an altitude of 800 ft., cruising speed 112 m.p.h. at an altitude of 800 ft., stalling speed 38 m.p.h., climb at sea level 1,000 ft. per minute, service ceiling 15,000 ft.

Landing Gear Bracing



REARWIN SPORTSTER 9000 KR

A.T.C. No. 591

CONSTRUCTION MATERIAL: Wings spars are of solid spruce, spruce ribs fabric covering material, landing gear is of fixed type, Goodyear wheel 18 x 8.3, Goodyear mechanical brakes, hydraulic landing gear shock unit, wheel tail unit, fuselage of welded steel tubing, fabric covered.

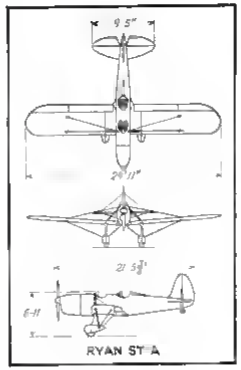
(For further specifications see table p. 105)

RYAN AERONAUTICAL Model ST A

Goodyear wheels 18 x 8.3, Goodyear mechanical brakes, Oleo landing gear shock unit, wheel tail unit, aluminum alloy monocoque fuselage.

STANDARD EQUIPMENT: Altimeter, compass, tachometer, air-speed, air pressure, oil temperature gages, fuel gage. Available as a land or seaplane—see photo and 3 view.

(For further specifications see table p. 105)



RYAN ST-A

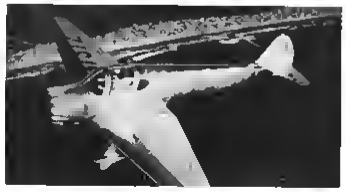
SPECIFICATIONS: Span 20 ft. 11 in., overall length 21 ft. 5⅝ in., overall height 6 ft. 11 in., landing gear tread 66 in., wing loading 12.9 lb. per sq. ft., power loading 12.8 lb. per hp., weight empty 1,031, gross weight 1,600 lb. this model is powered by a Menasco engine, total rated hp. 125 at sea level, fuel capacity 24 gallons, normal range 360 miles, fuel consumption at cruising speed 8.0 gallons per hour, diameter of propeller 80 in., area of wing (including ailerons) 124.0 sq. ft., total ailerons 12 sq. ft., fin 4.7 sq. ft., rudder 7.2 sq. ft., stabilizer 12 sq. ft., total elevators 10 sq. ft.

PERFORMANCE: High speed 126 m.p.h. at sea level, cruising speed 115 m.p.h. at an altitude of 3,000 ft., stalling speed 54 m.p.h., climb at sea level 800 ft. per minute, service ceiling 16,000 ft. Seats two.

CONSTRUCTION MATERIAL: Solid spruce wing spars, aluminum alloy ribs, fabric covering material, fixed type landing gear.

Guy Wire Fitting

A.T.C. No. 571



RYAN Model No. S-C

SPECIFICATIONS Span 37 ft 6 in., overall length 25 ft. 4½ in., landing gear tread 96⅝ in. Wing loading 10.7 lb per sq. ft., power loading 14.8 lb per hp., weight empty 1,345 lb., gross weight 2,150 lb. It is powered by a Warner engine. Total rated hp 145 at S. L. Fuel capacity 37 gal., normal range 525 miles fuel consumption at cruising speed 9.5 gal per hr.

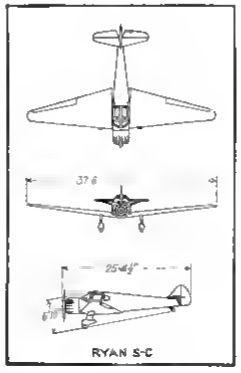
Propeller diameter is 82 in., wing area (including ailerons) 202 sq. ft., ailerons (total) 16.2 sq. ft., fin 5.1 sq. ft., rudder 6.6 sq. ft., stabilizer 14.3 sq. ft. total elevators 11.8 sq. ft.

PERFORMANCE High speed 150 m.p.h. at sea level, cruising speed 135 m.p.h. at 8,500 ft., stalling speed 45 m.p.h. Climbs at sea level 900 ft. per min. Service ceiling 17,200 ft.

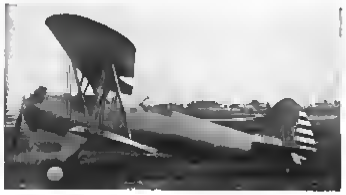
CONSTRUCTION MATERIAL Wings have steel spars, aluminum alloy ribs, Alclad and fabric covering material. Fixed type landing gear, Goodyear 18 x 8.3 wheel. Goodyear mechanical brakes, Oleo landing gear and shock unit, wheel tail unit, aluminum alloy monocoque fuselage. Plexiglas is used for cockpit enclosures, landing light covers, and similar transparent sections. Seating capacity two.

(For further specifications see table p. 185)

A. T. C. No. 658



RYAN S-C



ST. LOUIS AIRCRAFT Model PT-1

SPECIFICATIONS Span 33 ft. 10 in., overall length 21 ft. 5 in., overall height 9 ft. 3 in., wing loading 9.4 lb per sq. ft., power loading 12.3 lb per h.p., weight empty 2,055, gross weight 2,750 lb. Powered by a Wright engine, with a rating of 225 hp at sea level fuel capacity 42 gallons, normal range 350 miles, fuel consumption at cruising speed of 13.9 gallons per hour, wing area (including ailerons) 207 sq. ft. Seats two.

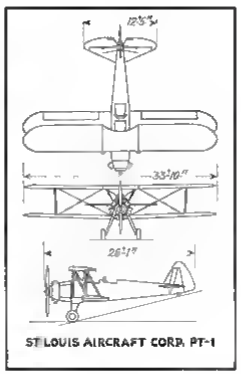
PERFORMANCE It has a high speed of 180 m.p.h., at sea level, and a cruising speed of 116 m.p.h. at sea level, stalling speed of 53 m.p.h., climb at sea level 880 feet per minute, service ceiling 15,000 feet.

CONSTRUCTION MATERIAL The wings are made of aluminum alloy spars, aluminum alloy tubing ribs and fabric covering. The fuselage is of monocoque type. Streamline landing gear wheels, size 24 in., Bendix hydraulic brakes, Aerol shock unit, and Aerol tail unit.

STANDARD EQUIPMENT Includes the following instruments: 2 Elgin clocks, 2 Pioneer altimeters, 2 Jaeger tachometers, 2 Cons. engine gauge, 1 Pioneer rate-of-climb, 1 Pioneer compass, 1 Pioneer bank and turn accessories include Lord instrument shock mountings, General tires, Bendix brakes, Hamilton Standard propeller, Bendix seats, push pull controls, ball bearings, Aeral shock strut.

(For further specifications see table p. 185)

No. A. T. C.



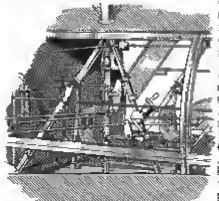
ST. LOUIS AIRCRAFT CORP. PT-1

SOUTHERN AIRCRAFT SM-10A

SPECIFICATIONS Span 34 ft. 1 in., overall length 25 ft. 2 in., height overall 9 ft. 6 in., 90.16 in. landing gear tread, wing loading 9.16 lb per sq. ft. power loading 12.4 lb. per hp., weight empty, 2,050 lb., gross weight 2,790 lb. The Lycoming engine is rated at 225 hp., the fuel capacity is 42 gallons normal range is 355 miles diameter of the propeller is 102 in. Seats two.

PERFORMANCE High speed 123 m.p.h., cruising speed 105 m.p.h., stalling speed 50 m.p.h., climb at sea level 850 ft. per minute, service ceiling 15,000 ft.

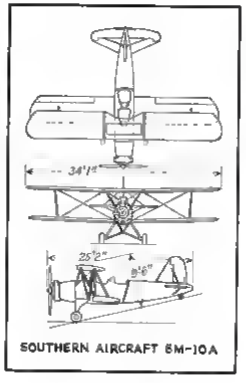
STANDARD EQUIPMENT Includes air speed indicator, altimeter, tachometer, ignition switch, oil pressure gage, oil thermometers, engine gage, compass, clock, accessories include Lord instrument shock mountings, General tires, Air Associates brakes, Curtiss Reed propeller, Bendix seats, Southern controls, Fafnir bearings, Cleveland or Bendix shock strut, Pyle Nat. lights, etc.



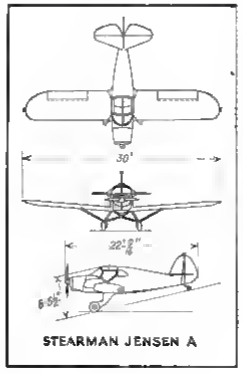
Cabane Strut Bracing

For further specifications see table p. 185)

No. A. T. C.



SOUTHERN AIRCRAFT SM-10A



STEARMAN JENSEN A

SPECIFICATIONS Span 30 ft., overall length 22 ft. 7½ in., height overall 6 ft. 5½ in. landing gear tread 67 in., wing loading 8.68 lb per sq. ft., power loading 17.63 lb per hp., weight empty 618 lb., gross weight 1,146 lb. The Lycoming engine is rated at 65 hp. at sea level. fuel capacity 20 gallons, normal range 450 miles fuel consumption 4.7 gallons per hour. diameter of the propeller is 10 in. Area of wing (including ailerons) 132 sq. ft., total ailerons 14.58 sq. ft., fin 4.32 sq. ft., rudder 6.27 sq. ft., stabilizer 11.04 sq. ft., total elevators 11.22 sq. ft.

PERFORMANCE High speed 115 m.p.h. at sea level, cruising speed 105 m.p.h. at sea level, stalling speed 45 m.p.h. at sea level, climb at sea level 750 ft. per minute, service ceiling 14,000 ft.

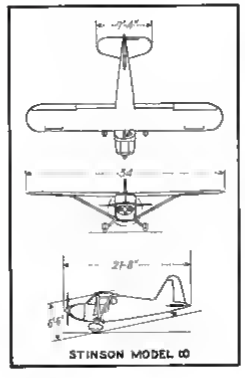
Landing Gear

No. A. T. C.

STEARMAN JENSEN A

STANDARD EQUIPMENT Includes following instruments U. S. Gage Altimeter, U. S. Air Speed Stewart Warner engine gage unit, Basco ignition switch; accessories include shock mount lugs, Firestone tires, Wheel Brakes, Freedman Bornbam propeller, stick controls, Fafnir control bearings, Grimes lights, wheel pants, tail wheel, etc. Seats two.

(For further specifications see table p. 185)



STINSON MODEL 10

SPECIFICATIONS Span 34 ft., overall length 21 ft. 8 in., overall height 6 ft. 0 in., landing gear tread 84 in., wing loadlog 10.5 lb per sq. ft., power loading 18 lb. per hp., weight empty 1,018 gross weight 1,625 lb. Has Franklin engine with a rating of 90 hp at sea level, fuel capacity 20 gallons per hour, diameter of propeller 72 in.

PERFORMANCE High speed 135 miles per hour at sea level, cruising speed 110 miles per hour at sea level, stallog speed 43.5 miles per hour, climb at sea level 600 ft. per minute service ceiling 14,000 ft.

CONSTRUCTION MATERIAL Wing spars are of solid spruce, wing covered with fabric, wheel size is Hayes 6.00 x 6, Goodrich hydraulic brakes Oleo-spring landing gear shock unit, wheel tail unit, welded steel tubing fuselage, fabric covered the weight empty of the Standard model is 954 lb. the landing gear is of fixed type 84 in. tread wheel size is Hayes 6 x 6. Goodrich hydraulic brakes landing gear shock unit is Oleo-spring. fuselage is welded steel tubing with fabric covering.

No. A. T. C.

STINSON Model Super Deluxe

STANDARD EQUIPMENT Includes for Super-Deluxe the following: dual magneto, navigation lights hydraulic brakes, parking brakes, compass, steerable tail wheel, engine driven generator, sound proofing, springdraulic shock absorbers.

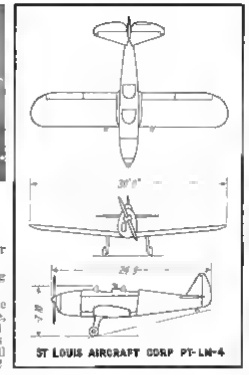
(For further specifications see table p. 185)

ST. LOUIS AIRCRAFT PT-LM-4 No. A. T. C.

SPECIFICATIONS It is equipped with a Ranger engine, rated at 180 hp. at sea level.

PERFORMANCE High speed 137 m.p.h., cruising speed 125 m.p.h. both at sea level.

STANDARD EQUIPMENT Includes Aeronautic clocks, altimeters, tachometers, engine gage, rate-of-climb compass and Pioneer bank and turn instruments. General tires and brakes Sensenich propeller, Bendix seats, push pull controls, ball bearings. Oleo shock strut. Seats 2.



ST. LOUIS AIRCRAFT CORP. PT-LM-4

WHITE Model PT 7 No. A. T. C.

SPECIFICATIONS Span 31 ft., overall length 24 ft. 5¾ in., overall height 8 ft. 9 in. wing loading 9.27 lb. per sq. ft., power loading 13.6 lb per hp. gross weight 2,243 lb. powered by a Warner or Kanner fuel capacity 36 gallons, normal range 332.5 miles wing area (including ailerons) 242.5 sq. ft. total ailerons 27.6 sq. ft.

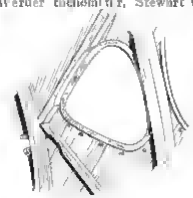
PERFORMANCE High speed 115 m.p.h., cruising speed 95 m.p.h., stalling speed 40 m.p.h., climb at sea level 1,000 ft. per minute.

(For further specifications see table p. 185)

SUMMIT AERONAUTICAL CORP. Model HM-5

SPECIFICATIONS Span 27 ft., overall length 22 ft., overall height 7 ft. 4 in., landing gear tread 80 in., wing loading 11.25 lb. per sq. ft., power loading 18 lb. per hp., weight empty 825 lb., gross weight 1,350 lb. The Continental engine is rated at 75 hp. at sea level. Its fuel capacity is 18 gallons, it has a normal range of 480 miles, fuel consumption at cruising speed is 4.7 gallons per hour, the diameter of the propeller is 70 in., area of the wing (including ailerons) is 120 sq. ft., total ailerons—10 sq. ft., fin 5.5 sq. ft. rudder 7.8 sq. ft., stabilizer 12.1 sq. ft., total elevators 8.1 sq. ft. Seats two. PERFORMANCE High speed of 137 m.p.h., at sea level, cruising speed of 125 m.p.h., at sea level, stalling speed 42 m.p.h., climb at sea level 800 ft. per minute, service ceiling 16,000 ft.

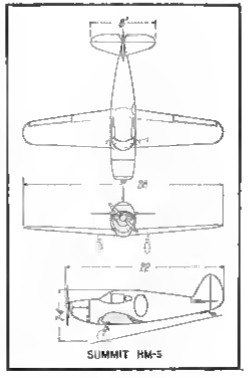
CONSTRUCTION MATERIAL Plastic spruce wing spars, plywood ribs, plywood covering. STANDARD EQUIPMENT Instruments: U. S. Gage air speed, U. S. Gage altimeter, Stewart Warner tachometer, Stewart Warner oil pressure gage, Stewart Warner oil temperature gage, Bendix Scintilla magneto switch, accessories: Firestone tires, Hayes brakes, Freedman, Burnham propeller, Fafnir bearings.



Window Installation

No. A. T. C.

(For further specifications see table pg. 185)



SUMMIT HM-5

TAYLORCRAFT Model BC 12-65

SPECIFICATIONS Span 36 ft., length overall 22 ft., height overall 6 ft. 10 in., wing loading 7.1 lb. per sq. ft., power loading 18.4 lb. per hp., weight empty 700 lb., gross weight 1200 lb. It is powered by a Continental engine, rated at 65 hp. at sea level, fuel capacity 18 gallons, normal range 375 miles, fuel consumption at cruising speed 4 gallons per hour. The propeller measures 72 inches in diameter. The wing area (including ailerons) is 169 sq. ft. Seats two.

PERFORMANCE High speed 105 m.p.h. at sea level, cruising speed 95 m.p.h. at sea level, stalling speed 38 m.p.h., climb at sea level 600 ft. per minute, service ceiling 15,000 ft.

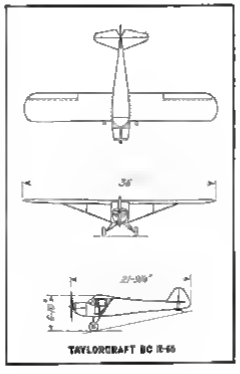
CONSTRUCTION MATERIAL Wing spars are of solid spruce, metal ribs, fabric covering. Welded steel tubing, fabric covered fuselage. Wheel tail unit.

STANDARD EQUIPMENT Dual ignition engine, wooden propeller, Sbinn Wheels with Brakes, Taylorcraft compass, full swivel tail wheel, parking brake, air speed indicator, altimeter, oil temperature gage, oil pressure gage, tachometer.

Wing Fitting

(For further specifications see table pg. 185)

A. T. C. No. 696



TAYLORCRAFT BC 12-65

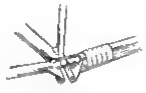
TAYLORCRAFT Model BL-T Trainer

SPECIFICATIONS Span 30 ft., overall length 22 ft., height overall 6 ft. 10 in., wing loading 11.8 lb. per sq. ft., power loading 23.0 lb. per hp., weight empty 682 lb., gross weight 1,150 lb. It is powered by a Lycoming engine, rated at 50 hp. at sea level, fuel capacity 12 gallons, normal range 270 miles, fuel capacity at cruising speed 3.5 gallons per hour. Wing area (including ailerons) 109.0 sq. ft.

PERFORMANCE High speed 97 m.p.h. at sea level, cruising speed 88 m.p.h. at sea level, stalling speed 38 m.p.h. Climb at sea level 450 ft. per minute. Service ceiling 13,000. Seats two.

CONSTRUCTION MATERIAL Wing spars are of solid spruce, metal ribs, fabric covering material, shock cord landing gear unit, skid tail unit. Welded steel tubing fabric covered fuselage.

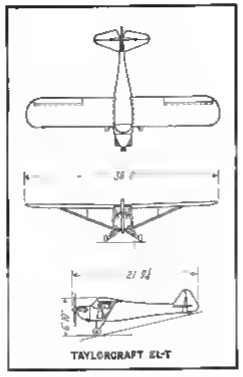
STANDARD EQUIPMENT Single ignition engine, wooden propeller, Sbinn wheels, tachometer, oil pressure and temperature geges, altimeter, air speed indicator. Optional equipment: cabin heater, dual ignition, navigation lights and battery, stick type control.



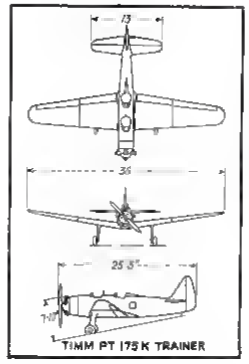
Rear Landing Gear Fitting

(For further specifications see table pg. 185)

A. T. C. No. 700



TAYLORCRAFT BL-T



TIMM PT 175K TRAINER

SPECIFICATIONS Span, 36 ft., overall length 25 ft. 5½ in., height overall 10 ft. 6 in., landing gear tread 109¾ in., wing loading 13.15 lb. per sq. ft., power loading 13.7 lb. per hp., weight empty 1700 lb., gross weight 2400 lb. It is powered by a Kinner engine rated at 175 hp. at sea level, fuel capacity 40 gallons, normal range 400 miles, fuel consumption at cruising speed 10 gallons per hour. The propeller measures 90 in. in diameter. Area of wing (including ailerons) 182.25 sq. ft., total ailerons 20.75 sq. ft., fin 12.1 sq. ft., rudder 9.85 sq. ft., stabilizer 24.66 sq. ft., total elevators 16.66 sq. ft. Seats two.

PERFORMANCE High speed 145 m.p.h. at sea level, cruising speed 126 m.p.h. at sea level, stalling speed 50 m.p.h., climb at sea level 900 ft. per minute, service ceiling 17,500 ft.

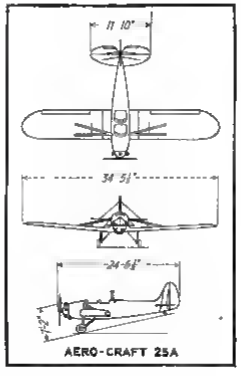
Landing Gear

No. A. T. C.

TIMM AIRCRAFT Model No. PT 175K

CONSTRUCTION MATERIAL The wing spars are boxed type, truss ribs covering material. The landing gear is of fixed type, Air Wheels 7.60 8. Shinn hydraulic brakes, Oleo boxed type shock unit, hydraulic tail unit, sprucn wood fuselage.

(For further specifications see table p. 185)



AERO-CRAFT 25A

SPECIFICATIONS Span 34 ft. 5.5 in., overall length 24 ft. 6.5 in., height overall 7 ft. 2.5 in., wing loading 10.9 lb. per sq. ft., power loading 13.5 lb. per hp., weight empty 1,302 gross weight 1,916 lb. powered by a Kinner engine, total rated 100 hp. at sea level, normal range 400 miles, wing area (including ailerons) 175 sq. ft. Seats two.

PERFORMANCE High speed 125 m.p.h. at sea level, cruising speed 115 m.p.h. at sea level, stalling speed 45 m.p.h., climb at sea level 1,100 ft. per minute, service ceiling 17,950 ft.

CONSTRUCTION MATERIAL Spars are of spruce, wood ribs, fabric covering material. Landing gear is of fixed type.

STANDARD EQUIPMENT Kinner R5 Series 2 engine rated 100 hp. at 1,850 r.p.m. at S.L.

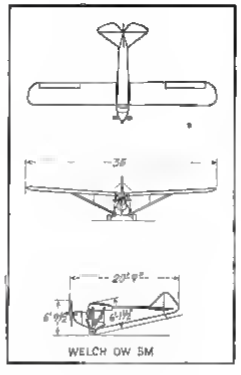
Wing Strut Bracing

A. T. C. No. 733

WALLY TIMM Model Aero-Craft

hydraulic brakes, dual controls, tachometer, altimeter, airspeed indicator, oil temperature gage, oil pressure gage, oil roll spring shock struts, tail wheel (steerable and full swived), 7.60 x 8 wheels and tires. Extra equipment: navigation lights, generator, engine cover, cockpit cover, compass, battery, starter.

(For further specifications see table p. 185)



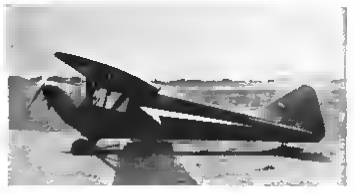
WELCH OW-5M

SPECIFICATIONS Span 34 ft. 4 in., overall length 20 ft. 6 in., overall height 7 ft., landing gear tread 56½ in., wing loading 6.6 lb. per sq. ft., power loading 25.7 lb. per hp., weight empty 528, gross weight 950 lb., powered by a Continental engine, total rated horse power 40 at sea level, fuel capacity 9 gallons, normal range 250 miles, fuel consumption at cruising speed 3 gallons per hour, diameter of propeller 66 in., wing area (including ailerons) 138.0 sq. ft., total aileron area 18.92 sq. ft., fin area 2.12 sq. ft., rudder area 9.13 sq. ft., stabilizer area 14.4 sq. ft., total elevator area 11.2 sq. ft. Seats two.

PERFORMANCE High speed 93 m.p.h. at sea level, cruising speed 85 m.p.h., at sea level, stalling speed 32 miles per hour, climb at sea level 460 feet per minute, service ceiling 12,000 ft.

Landing Gear

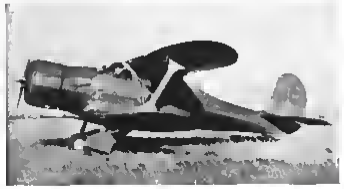
A. T. C. No. 637



WELCH Model OW-5M

CONSTRUCTION MATERIAL Spruce wing spars, ¾" section, basswood ribs fabric covering material, fixed type landing gear. Welch wheel size 16 x 4, solid landing gear shock unit, wheel tail unit, fuselage is constructed of welded steel tubing, fabric covered.

(For further specifications see table p. 185)



BEECH Model D 17 A

SPECIFICATIONS Span 32 ft., overall length 26 ft 7⅝ in., overall height 8 ft., landing gear tread 86 in., wing loading 14 17 lb. per sq ft., power loading 13.1 lb. per hp., weight empty 2,517, gross weight 4,250 lb., powered by a Wright Whirlwind engine, total rated hp 320 at sea level, fuel capacity 98 gallons, normal range 820 miles, fuel consumption at cruising speed 17 gallons per hour, diameter of propeller 99 in., wing area (including ailerons) 296.5 sq. ft., total aileron area 23.35 sq. ft., fin area 6.56 sq. ft., rudder area 8.7 sq. ft., stabilizer area 24.5 sq. ft., total elevator area 16.6 sq. ft.

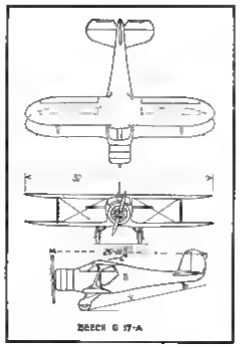
PERFORMANCE High speed 178 m.p.h. at sea level, cruising speed 150 m.p.h. at an altitude of 9,000 ft., stalling speed 50 m.p.h., climb at sea level 1,100 ft. per minute, service ceiling 15,500 ft.

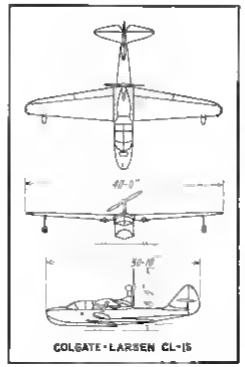
Landing Gear

CONSTRUCTION MATERIAL Solid spruce wing spars, spruce ribs, fabric covering, retractable type of landing gear, Goodyear wheel size 7.50 x 10, hydraulic brakes, Oleo spring landing gear shock unit, welded steel tubing, fabric covered fuselage. Seats 5.

(For further specifications see table p 109)

A. T. C. No. 713





SPECIFICATIONS Span 40 ft., overall length 30 ft. 10 in., height overall 8 ft. 5 in., landing gear tread 98¾ in. Wing loading 14.5 lb. per sq. ft., power loading 14.3 lb. per h.p., 1,750 lb. weight empty, gross weight 2,800 lb., powered by a Ranger engine with a rating of 200 h.p. at sea level, fuel capacity 55 gallons, normal range 500 miles, diameter of propeller 96 in. Wing area (including ailerons) 197.5 sq. ft., total ailerons 16.08 sq. ft., fin 14.41 sq. ft., rudder 9.98 sq. ft., stabilizer 18.58 sq. ft., total elevators 10.30 sq. ft.

PERFORMANCE High speed 140 miles per hour at sea level, cruising speed 125 miles per hour at sea level, stalling speed 50 miles per hour, climb at sea level 800 ft. per minute, service ceiling 14,500 ft. Seats 4.

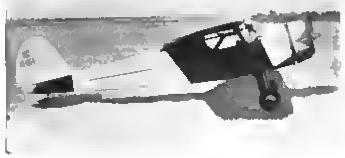
CONSTRUCTION MATERIAL Box wing spar 30 per cent chord; full web ribs; wing covering of plastic-bonded mahogany; fuselage is of modified NACA Model 35-B. Retractable type landing gear and tail wheel. Tail wheel 360 degree swivel.

STANDARD EQUIPMENT This model is equipped with the following instruments, airspeed indicator, altimeter, compass, oil temperature pressure gages, fuel pressure, temperature gages, eclipse electrical starter, tachometer, and necessories are the Lord engine mounting, Goodrich tires, Wood Hartzell propeller, Colgate Larsen seats, Colgate Larsen shock strut.

No. A. T. C.

COLGATE LARSEN Model CL 15

(For further specifications see table p 109)



CESSNA Model C-145

SPECIFICATIONS Span 34 ft. 2 in., overall length 24 ft. 8 in., overall height 7 ft., landing gear tread 87 in., wing loading 13.5 lb. per sq. ft., power loading 16.9 lb. per h.p., weight empty 1380 lb., gross weight 2450 lb. Powered by a Warner with Lord mountings with the rating of 145 h.p. at sea level, fuel capacity 35 gallons, normal range 325 miles, fuel consumption at cruising speed 9.5 gallons per hour, diameter of propeller 84 in. The wing (including ailerons) is 181.0 sq. ft., the total ailerons 12.35 sq. ft., fin 7.1 sq. ft., rudder 6.11 sq. ft., stabilizer 17.3 sq. ft., total elevators 13 sq. ft.

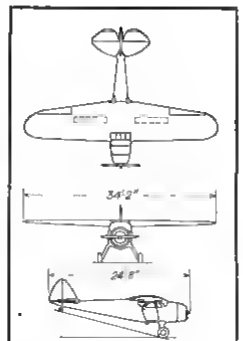
PERFORMANCE The high speed 162 miles per hour at sea level, cruising speed 151 miles per hour at an altitude of 8,000 ft., stalling speed 49 miles per hour, climb at sea level 1000 ft. per minute, service ceiling 18,000 ft.

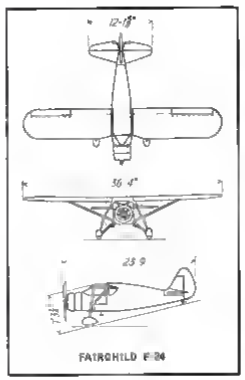
CONSTRUCTION MATERIAL Wing spars are of laminated spruce, spruce ribs, fabric and aluminum alloy covering materials, fuselage is of welded steel tubing with fabric covering. The landing gear is of fixed type, wheel size 6.50 x 10, also available with 21 in. streamlines or 22 x 10-4 wheels with Goodyear hydraulic brakes, Cessna Oleo shock asrt, wheel tail unit. Seats 4.

Tail Wheel

(For further specifications see table p 109)

A. T. C. No. 701

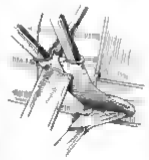




SPECIFICATIONS Span 30 ft. 4 in., overall length 23 ft. 9 in., height overall 8 ft., landing gear tread 111 in., wing loading 13.2 lb. per sq. ft., power loading 17.58 lb. per hp., 1482 lb. weight empty, 2550 lb. gross weight. It is powered by a Wright 145 h.p. engine at sea level, fuel capacity 60 gallons, normal range 520 miles, fuel consumption at cruising speed 9.5 gallons per hour, diameter of propeller 86 in. Wing area (including ailerons) 103.3 sq. ft., total ailerons 21 sq. ft., fin 6.1 sq. ft., rudder 10.1 sq. ft., stabilizer 21.9 sq. ft., total elevators 13.5 sq. ft.

PERFORMANCE High speed 135 miles per hour at sea level, cruising speed 122 miles per hour at an altitude of 5,000 ft., stalling speed 50 miles per hour, climb at sea level 720 miles per minute, service ceiling 15,700 ft. Seats 4.

CONSTRUCTION MATERIAL Spars of solid spruce, spruce ribs, fabric covering material, fuselage is of welded steel tubing with fabric covering.



Strut Bracing

A. T. C. No. 707

FAIRCHILD Model F 24

Plexiglas cockpit enclosures, landing-light lenses. The landing gear is of fixed type, wheel type is Hayes and size is 7.50 x 10. Palmer hydraulic brakes. Oleo landing gear shock unit, wheel tail unit. The Fairchild four-place F 24 W-40 has the same standard equipment as the F 24.

(For further specifications see table p 109)

CESSNA Model T-50 TWIN

SPECIFICATIONS Span 41 ft. 11 in., overall length 32 ft. 9 in., height overall 9 ft. 11 in., landing gear tread 151 in., wing loading 17.3 lb. per sq. ft., power loading 11.3 lb. per h.p. 3000 lb. weight empty 5100 lb. gross weight, powered by a Jacobs engine with a rating of 450 hp at sea level, fuel capacity 120 gallons, normal range 740 miles, fuel consumption at cruising speed 28 gallons per hour, diameter of propeller 93 in., wing area (including ailerons) 295 sq. ft., total ailerons 18 sq. ft., fin 10.9 sq. ft., rudder 14.9 sq. ft., stabilizer 40 sq. ft., total elevators 22.7 sq. ft. Seats five.

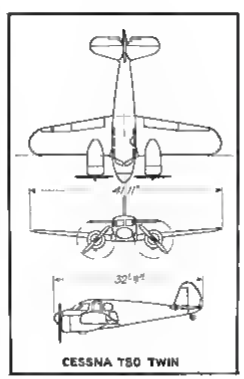
PERFORMANCE High speed 195 m.p.h. at sea level, cruising speed 191 m.p.h. at an altitude of 7500 ft., stalling speed 55 m.p.h., climb at sea level 1525 ft. per minute, service ceiling 22,000 ft.

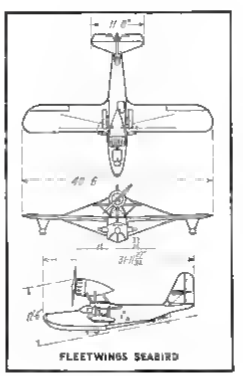
CONSTRUCTION MATERIAL Wing spars are of laminated spruce, spruce ribs, fabric and aluminum alloy covering materials, fuselage is of welded steel tubing. Plexiglas cockpit enclosures, landing light covers. The landing gear is retractable type, wheel size 8.50 x 10, Goodyear hydraulic brakes, Bendix Oleo landing gear shock unit, wheel tail unit.

(For further specifications see table p 109)

Wing Structure

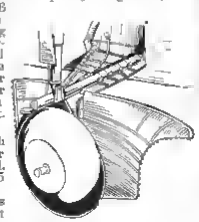
A. T. C. No. 722





SPECIFICATIONS Span 40 ft. 6 in., overall length 32 ft. height overall 12 ft. 6 in., landing gear tread 93½ in. Wing loading 15.96 lb. per sq. ft. power loading 12.5 lb. per h.p., 2,453.7 lb. weight empty, gross weight 3,750 lb. Powered by a Jacobs engine with a rating of 300 h.p. at sea level, fuel capacity 70 gallons, normal range 516 miles, diameter of propeller 102 in. Wing area (including ailerons) 235 sq. ft., total ailerons 23.3 sq. ft. fin 18.9 sq. ft., rudder 12.5 sq. ft., stabilizer 87 sq. ft., total elevators 15.1 sq. ft. Seats 4.

PERFORMANCE High speed 150 miles per hour at sea level, cruising speed 135 miles per hour, stalling speed 58 miles per hour, climb at sea level 914 ft. per minute, service ceiling 14,600 ft.



Retractable Gear

A. T. C. No. 680

FLEETWINGS Model F 501 Seabird

STANDARD EQUIPMENT This model is equipped with the following instruments: bank and turn, rate of climb, compass, engine gages, head temperature, altimeter, air speed and ammeter-voltmeter; has a two-position propeller and navigation and landing lights.

(For further specifications see table p 109)

GRUMMAN Model No. G 44 (Widgeon)

SPECIFICATIONS Span 40 ft., overall length 31 ft., overall height 9 ft., landing gear tread 90 in., wing loading 18.875 lb. per sq. ft., power loading 11.25 lb. per hp., weight empty 3,075 gross weight 4,500, powered by two Ranger engines with a total rating of 400 hp. at sea level, fuel capacity 308 gallons, normal range 735 miles, fuel consumption at cruising speed 20 gal-

lons per hour, wing area (including ailerons) 245 sq. ft., aileron area (total) 14.6 sq. ft., fin area 17.5 sq. ft., rudder area 14 sq. ft., stabilizer area 25.8 sq. ft., total elevator area 19.6 sq. ft. Seats five.

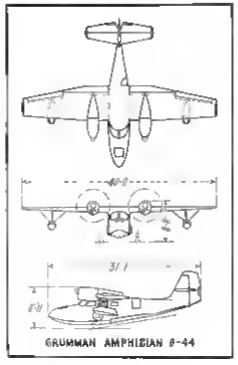
PERFORMANCE Cruising speed 150 miles per hour at an altitude of 3,000 ft., stalling speed 61 miles per hour, climb at sea level 850 ft. per minute, service ceiling 15,000 ft.

CONSTRUCTION MATERIAL Aluminum alloy box wing spars, aluminum alloy ribs, metal and fabric covering, retractable type landing gear, Hayes hydraulic brakes, Hayes wheels, size 7.50 x 10, Bendix Oleo landing gear shock unit, fuselage aluminum alloy.

STANDARD EQUIPMENT This model is equipped with the following: two sets of engine instruments, compass, air speed indicator, turn-and bank indicator, rate of climb, sensitive altimeter, two fuel quantity gages, voltammeter, standard Lear receiver and transmitter.

(For further specifications see table p. 106)

No. A. T. C.



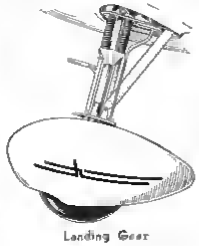
GRUMMAN AMPHIBIAN S-44

HOWARD Model DGA-15

SPECIFICATIONS Span 38 ft., overall length 26 ft. 2¼ in., overall height 8 ft. 5 in., landing gear tread 100 in., wing loading 20.7 lb. per sq. ft., power loading 13.6 lb. per hp., weight empty 2,500, gross weight 4,350 lb. Wright engine rated at 320 hp., fuel capacity 118 gallons, normal range 1,025 miles, fuel consumption at cruising speed 18.5 gallons per hour, diameter of propeller 90 in. Wing area (including ailerons) 210 sq. ft., total aileron area 18.54 sq. ft., fin area 11.72 sq. ft., rudder area 9.62 sq. ft., total elevator area 21.20 sq. ft.

PERFORMANCE Cruising speed 175 miles per hour at an altitude of 8,500 ft., stalling speed 60 ft., climb at sea level 1,050 ft. per minute, service ceiling 17,500 ft. Seats five.

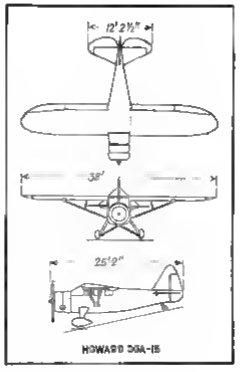
CONSTRUCTION MATERIAL Wing spars are of solid spruce; spruce ribs; plywood covering material; fuselage is of welded steel tubing covered with aluminum alloy and fabric; Plexiglas enclosures. The landing gear is of fixed type, wheel size 8.00 x 10; Goodyear hydraulic brakes.



Landing Gear

(For further specifications see table p. 106)

A. T. C. No. 717



HOWARD DGA-15

STINSON Model SR-10J

SPECIFICATIONS Span 41 feet 10½ inches, length overall 27 feet 10½ inches, height overall 8 feet 7 inches. Landing gear tread 111½ inches. Wing loading 16.0 pounds per square foot, power loading 14.6 pounds per horse power, weight empty 2,650 pounds, gross weight 4,150 pounds. It is powered by a Lycoming engine with Lord mountings. Total rated horse power 285 at sea level; fuel capacity 100 gallons

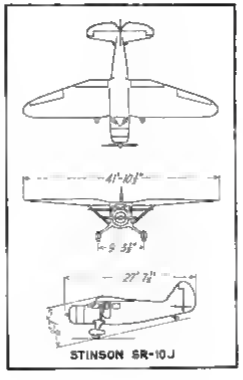
normal range 835 miles, fuel consumption at cruising speed 18.8 gallons per hour, propeller diameter 102 inches. Wing (including ailerons) 258.5 square feet; aileron area (total) 22.02 square feet, fin area 12.0 square feet; rudder area 15.16 square feet, stabiliser 25.08 square feet; total elevator area 19.75 square feet.

PERFORMANCE Cruising speed 155 miles per hour at 4,000 feet, stalling speed 60 miles per hour; climbs at sea level 1,040 feet per minute, service ceiling 15,800 ft. Seats 4 to 5.

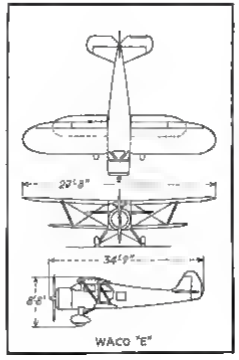
CONSTRUCTION MATERIAL Wings have welded steel tubing truss spars, Rusco aluminum alloy ribs, fabric covering; fixed landing gear, Hayes 7.50 x 10 wheels, Goodrich hydraulic brakes, Spring Oleo landing gear shock unit, wheel tail unit, welded steel tubing fabric covered fuselage.

(For further specifications see table p. 109)

No. A. T. C.



STINSON SR-10J



WACO "E"

SPECIFICATIONS Span of model SRE 34 ft. 9 in., overall length 25 ft. 8 in., overall height 8 ft. 8 in., landing gear tread 101 in., wing loading 17.06 lb. per sq. ft., power loading 10.5 lb. per hp., weight empty 2,734, gross weight 4,200. The Waco E is available with Lycoming, Jacobs, P. & W. or Wright engines. Powered by a P. & W. Wasp Jr., it has a rating of 400 hp. at 5,000 ft., fuel capacity 125 gallons, normal range 840 miles, fuel consumption at cruising speed 22.7 gallons per hour, wing area (including ailerons) 246 sq. ft. Seats 5.

PERFORMANCE High speed 200 miles per hour at sea level, cruising speed 195 miles per hour at an altitude of 6,000 ft., stalling speed 60 miles per hour, climb at sea level 1,550 ft. per minute, service ceiling 23,500 ft.

CONSTRUCTION MATERIAL Wing spars are of spruce, spruce ribs, plywood covering ma-

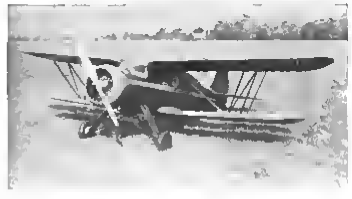
WACO MODEL S

SPECIFICATIONS The Waco S is available with Jacobs or Continental engines. Model YKS span 33 ft. 3 in., overall length 25 ft. 4 in., overall height 8 ft. 4 in., landing gear tread 102 in., wing loading 15.32 lbs. per sq. ft., power loading 14.44 lb. per hp., weight empty 1,945, gross weight 3,250. Powered by a Jacobs engine, with the rating of 225 hp. at sea level, fuel capacity 70 gallons, normal range 518 miles, fuel consumption at cruising speed 15.5 gallons per hour, wing area (including ailerons) 244 sq. ft. Model 2KS has a power loading of 11.40 lb. per hp., 1,981 empty weight, total rated hp. 285, at sea level, normal range 504 miles (all range figures with 15% reserve fuel), fuel consumption at cruising speed 17 gallons per hour. Seats 5.

PERFORMANCE High speed 144 miles per hour at sea level, cruising speed 135 miles per hour at an altitude of 6,000 to 10,000 ft., stalling speed 52 miles per hour, climb at sea level 750 ft. per minute, service ceiling 12,500 ft.

CONSTRUCTION MATERIAL Wing spars are of spruce, spruce ribs, fabric covering material, wheel size is 7.50 x 10, Hayes hydraulic brakes, Waco Oleo landing gear shock unit, wheel tail unit.

A. T. C. No. 626



WACO Model S

STANDARD EQUIPMENT This model is equipped with the following instruments: compass, tachometer, altimeter, air speed, oil pressure, oil temperature and gas gages and voltammeter, Lord instrument mountings. Approved for floats.

(For further specifications see table p. 109)

BEECH Model 18S

SPECIFICATIONS: Span 47 ft 6 in., overall length 34 ft. 3 in., height overall 9 ft. 5 in., landing gear tread 15-¾ in., wing loading 21.5 lb per sq. ft., power loading 8.3 lb per hp., weight empty 5,056 lb., gross weight 7,500 lb. The two P. & W. Wasp, Jr. engines are rated at 600 hp. at sea level, the fuel capacity is 210 gallons, normal range 1,100 miles, fuel consumption at cruising speed 43 gallons per hour, diameter of the propeller is 99 in., area of wing (including ailerons) 347 sq. ft., total aileron area 23.9 sq. ft., fin area 16.3 sq. ft., rudder area 17.3 sq. ft., stabilizer area 38.2 sq. ft., total elevator area 27.2 sq. ft. Seats 8 or 9.

PERFORMANCE: High speed of 230 m.p.h. at sea level, cruising speed of 220 m.p.h., at altitude of 12,000 ft., stalling speed 61 m.p.h., climb at sea level 1,850 ft. per minute, service ceiling 21,000 ft.

CONSTRUCTION MATERIAL: Welded steel tubing wing spars, aluminum alloy ribs, aluminum alloy covering, fuselage is of aluminum alloy, retractable landing gear, Goodyear wheel, size 29 x 135, Goodyear hydraulic brakes, air oil shock unit, retractable wheel tail unit. Plexiglas cockpit enclosures and similar transparent sections.

Travel six hours without refueling

. . . with all seats occupied

. . . in a Fairchild "24"

A Warner Fairchild "24" will fly non-stop with four big people from Chicago to New York without benefit of tail-winds and still offer a twenty minute reserve at the end of the trip!

This generous range—accomplished with standard equipment (two thirty-gallon tanks)—means a great deal to the thoughtful private owner in safety, convenience and block-to-block speed. It means that you can make long detours around bad weather when others must land. It means that you have ample reserve to avoid hazardous landing on unfamiliar terrain as a result of getting lost. It means that you can complete schedules without the annoyance of frequent and time-consuming refueling operations. It means that whenever it is necessary for you to continue flying, you can do so in a Warner Fairchild "24" for six full hours, and without the slightest sacrifice of passenger payload.

To this important feature, add a Warner engine of 145 or 165 husky horses, three-position manually operated flaps, steerable tailwheel, hydraulic brakes, traditional Fairchild quality—and you will instantly see why Fairchild sales are now booming to new record highs

FAIRCHILD AIRCRAFT

Division of Fairchild Engine & Airplane Corporation
Hagerstown, Maryland . . . Cable Address "Faircraft"

Something you will never find in the performance figures . . .

Reliable, economical performance over the lifetime of an engine is a function of sound design and precision production. Endless hours are spent by Ranger in making sure that materials and manufacture are as perfect as modern science and human effort can assure. Doggedly testing the capacity of every Ranger spring to meet all the conceivable stresses of engine operation is dull but essential. Nothing is left to chance, for with Ranger there can be no compromise with quality

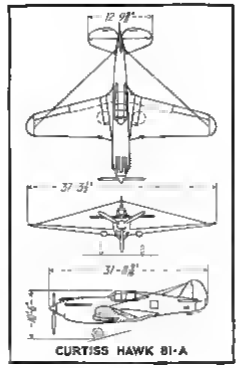
This model is powered by an Allison engine. The total rated horsepower is 1,090 at an altitude of 15,000 feet. Fuel capacity is 160 gallons.

Gun Installation

normal range 803 miles. The wing area (including ailerons) is 236 square feet, fin area 7.6 square feet, rudder area 13.7 square feet, stabilizer area 28.8 square feet, and area of total elevators is 19.2 square feet.

CONSTRUCTION MATERIAL: The wing spars of this model are constructed of metal, the ribs are of metal, and it has Alclad covering material. It is equipped with a retractable type landing gear, hydraulic brakes, Curtiss-Oleo landing gear shock unit, wheel tail unit, and monocoque type Alclad fuselage.

(For further specifications see p. 115)



CURTISS HAWK 81-A

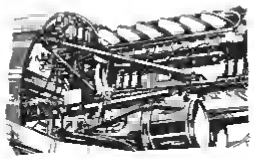
CURTISS Model P-40

SPECIFICATIONS: The span of this model is 37.3 feet, length overall 31.7 feet, height overall 10.6 feet. Wing loading 28.6 pounds per square feet, power loading 6.6 pounds per horsepower, weight empty 5,381 pounds, gross weight 8,789 pounds. This model is powered by an Allison engine. The total rated horsepower is 1,000 at 16,000 feet. Fuel capacity 120 gallons.

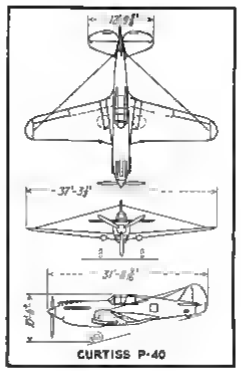
normal range 945 miles. The wing area (including ailerons) is 236 square feet, fin area 7.0 square feet, rudder area 13.7 square feet, stabilizer area 28.8 square feet, area of total elevators 19.2 square feet.

CONSTRUCTION MATERIAL: The wings of this model have spars made of metal, ribs made of metal and the covering material is of Alclad. It is equipped with a retractable type landing gear, hydraulic brakes, Curtiss-Oleo landing gear shock unit, wheel tail unit and it has a monocoque type fuselage constructed of Alclad.

(For further specifications see p. 115)



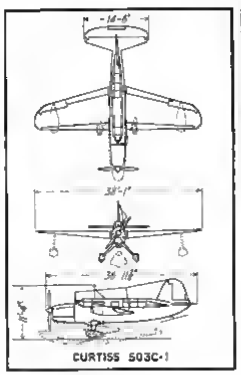
Engine Mount



CURTISS P-40

CURTISS-WRIGHT (Buffalo) SO3C-1

SPECIFICATIONS: Span 38 feet, length overall 36 ft. 9 in., height overall 15 ft. Wing loading 19.7 pounds per square foot, power loading 12.7 pounds per square foot, weight empty 4284 pounds, gross weight 5729 pounds. This model is powered by a Ranger inverted engine total rated horsepower 520. Fuel capacity 100 gallons. Wing area (including ailerons) 290 square feet, fin area 13.0 square feet, rudder area 13.1 sq. ft.



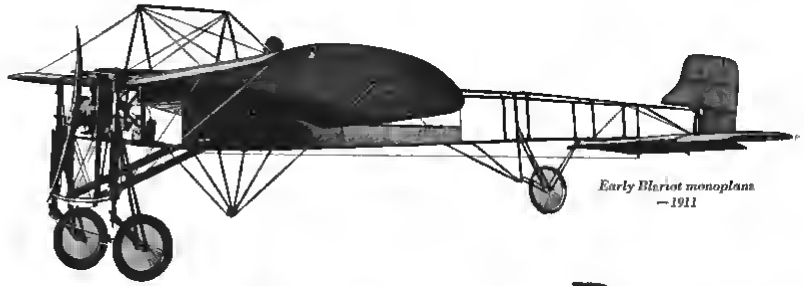
CURTISS SO3C-1

BREWSTER Model 340

SPECIFICATIONS: Span 47 ft. overall length 39½ ft. height overall 15¼ ft. It is powered by a Wright Cyclone engine of 1500 hp.

STANDARD EQUIPMENT: Kollsman Sperry, Pioneer, Elgin, Weld & Kiddy Asco instruments, Bendix shock mountings, General tires, Hayes brakes Curtiss propeller Bendix seats, Arens controls, Torrington bearings Oleo shock strut, Mazda lights. Radio: Model G F series

(For further specifications see p. 115)



Early Bleriot monoplane —1911

From Bleriot to B-26's

Martin B-26 bomber—1941

When Earle Ovington carried the first U. S. air mail in 1911, his Bleriot monoplane was equipped with Goodyear airplane tires. Then Goodyear was already the leading manufacturer of tires and other rubber products for aircraft. And by continued improvements that have steadily anticipated the industry's need for tires of greater carrying and cushioning capacity, Goodyear continues to be foremost. Today many of the largest, fastest ships that fly are coming off the production lines with Goodyear tires, tubes, wheels and brakes. And beyond this Goodyear engineers are working hand-in-glove with aircraft designers in projecting wheel equipment for still greater ships that are as yet but dreams upon the drafting table. Perhaps we could assist you, too. Write. Aeronautics Department, Goodyear, Akron, Ohio, or Los Angeles, California.

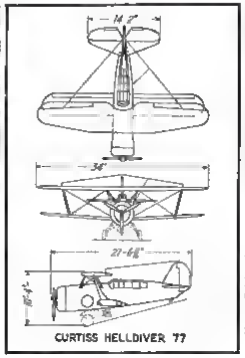
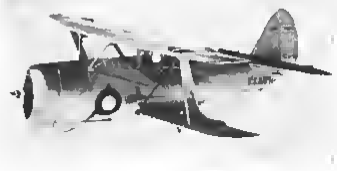
Landing Gear



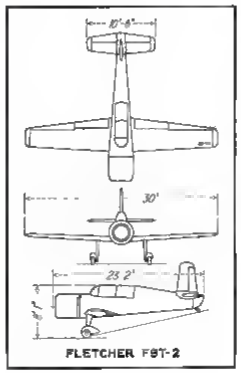
CURTISS HELLDIVER 77



CURTISS Model Helldiver 77

SPECIFICATIONS Span 34 feet, overall length 27 feet 5 inches, overall height 10 feet 4 inches, wing loading 19.7 pounds per square foot, power loading 6.6 pounds per horse power, weight empty 4 548, gross weight 6 236 pounds, powered by a two-row Wright Cyclone engine, total rated horse power 950 at an altitude of 15,200 feet, fuel capacity 135 gallons, range 355 miles

(For further specifications see p 115)



FLETCHER FST-2

SPECIFICATIONS Span 30 feet, overall length 23 2 feet, overall height 8 1 feet. The landing gear tread is 101 inches, wing loading 20.0 pounds per square foot, power loading 8.75 pounds per horsepower, weight empty 1,740 gross weight 2,500 pounds. It is powered by a Wright engine, with total rated horsepower 285 at sea level, fuel capacity 50 gallons, normal range 540 miles, fuel consumption at cruising speed 14 gallons per hour, diameter of propeller 7 feet 10 inches, wing area (including ailerons) 125 square feet, total area of ailerons 11.4 square feet, fin area 8.9 square feet, rudder area 4.1 square feet, stabilizer area 17.8 square feet, area of total elevators 8.2 square feet. Seats two

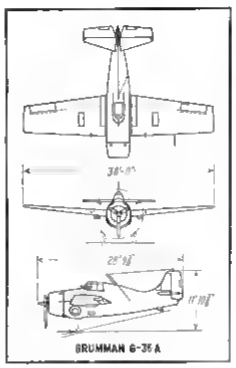
PERFORMANCE High speed 175 miles per hour at sea level, cruising speed 150 miles per hour at sea level, stalling speed 60 miles per hour, climb at sea level 1 340 feet per minute, service ceiling 19 000 feet.

Cockpit Enclosure

FLETCHER Model FST 2

CONSTRUCTION MATERIAL Spruce wing spars, spruce ribs, plywood covering. It is equipped with fixed type of landing gear, Firestone wheels 8.00 x 6, Firestone hydraulic brakes, air and Oleo landing gear shock unit, wheel tail unit monocoque plywood fuselage

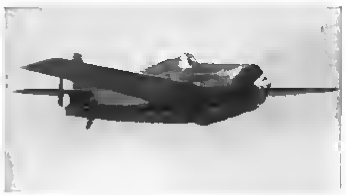
(For further specifications see p 115)



GRUMMAN G-36A

SPECIFICATIONS Span 38 ft., overall length 28 ft 10 in., overall height 9 ft. 2½ in. It is powered by a Wright Cyclone engine. Total rated hp. 1,200 at take-off. Wing area (including ailerons) 290 sq. ft., aileron area (total) 11.48 sq. ft., fin area 13.2 sq. ft. rudder area 9.88 sq. ft., stabilizer area 20.43 sq. ft., total elevator area 18.9 sq. ft. In addition to this and the model JRF 2 military amphibian Grumman builds a military amphibian model G21B whose specifications are, span 49 ft., overall length 38 ft. 4 in. overall height 12 ft., landing gear tread 90¾ in. Wing loading 21.3 lb. per sq. ft. power loading 8.9 lb. per hp., weight empty 5 425 lb., gross weight 8 000 lb. It is powered by 2 Pratt & Whitney Wasp Jrs., total rated hp. 800 at 5 000 ft. Fuel capacity 220 gallons, normal range 800 miles. Propeller diameter 102 in. Wing area (including ailerons) 375 sq. ft., aileron area (total) 22.8 sq. ft., fin area 26.7 sq. ft., rudder area 21 sq. ft. stabilizer area 44.8 sq. ft., total elevator area 31.2 sq. ft.

CONSTRUCTION MATERIAL: Wings of the G 36A have aluminum alloy spars, aluminum alloy ribs, metal covering. Retractable landing gear, 26 x 6 wheel, hydraulic brakes Bendix Oleo landing gear and shock unit, wheel tail unit, aluminum alloy monocoque fuselage



GRUMMAN Model No G-36A

STANDARD EQUIPMENT Complete set of flight and engine instruments. Lord shock mountings, Goodrich tires, Hayes brakes, Hamilton Hydromatic propeller, Bendix seats, Bendix shock strut, Grimes lights. Provision is made for a two-way radio

(For further specifications see p 115)

We use the "AC" stamp to say:

this Steel has earned its wings!

THIS "AC"—Aircraft Quality—stamp goes only on those U·S·S Carilloy Alloy Steels that measure up to the high requirement of aircraft manufacture.

To earn this AC rating, the steel not only receives special care in every phase of manufacture, but must run the gauntlet of unusual tests and inspections, that prove its special fitness for use in airplane parts, engines and accessories.

Every detail of steel quality necessary to fulfill the high standards of aircraft requirements is checked and becomes a matter of record. Specially trained laboratory men, using equipment much of which has been developed for the purpose, painstakingly check the steel.

Once it has passed these exacting tests, the AC mark on Carilloy Alloy bars and billets acts as a quality guide for your plant organization—provides an identifying symbol that states, in effect, "here is *aircraft quality* steel—on which you can confidently rely."

MAGNAFLUX (magnetic) INSPECTION of laboratory tests. In this machine the specimen is being subjected to high intensity magnetic fields during test.

RIGID SURFACE INSPECTION of every piece of Carilloy Alloy Steel as practiced at our mills. Specially trained inspectors are used in this work.

MICROSCOPIC EXAMINATION—micro-structural features are checked with special regard for aircraft requirement.

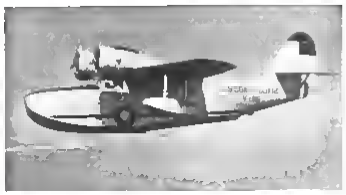
UNITED STATES STEEL



GRUMMAN Model No. JRF-2

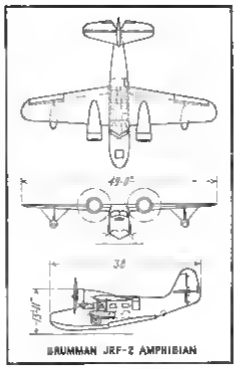
SPECIFICATIONS: Span 49 ft., length overall 38 ft. 4 in., height overall 12 ft., landing gear tread 00⅝ in., wing loading 21.3 lb. per sq. ft., power loading 8.0 lb. per hp., weight empty 5,530 lb., gross weight 7,955 lb. It is powered by a P. & W. Wasp Jr. T6D1 rated hp. 800 at 5,000 feet, fuel capacity 220 gal., normal range 1,000 mi., propeller diameter 102 in., wing area (including ailerons) 375 sq. ft., aileron area (total) 22.5 sq. ft., fin area 26.3 sq. ft., rudder area 21 sq. ft., stabilizer area 44.8 sq. ft., total elevator area 31.2 sq. ft. Instruments have Lord mountings. Seats eight.

PERFORMANCE: High speed 200 m.p.h. at 5,000 ft., cruising speed 190 m.p.h. at 9,600 ft., stalling speed 85 m.p.h., climb at sea level 1,300 ft. per min., service ceiling 22,000 ft.

CONSTRUCTION MATERIAL: Wings have aluminum alloy box spars, aluminum alloy ribs, metal covering material, retractable type landing gear, Hayes wheel 30 x 7, Hayes hydraulic brakes. Bendix Oleo landing gear and shock unit, wheel tail unit, aluminum alloy monocoque fuselage.

(For further specifications see table p. 115)

Wing Float



GRUMMAN JRF-2 AMPHIBIAN

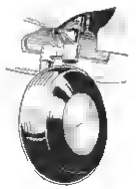
GLENN L. MARTIN Model 167 W

SPECIFICATIONS: Span 61 ft. 4 in., overall length 46 ft. 8 in., overall height 10 ft., landing gear tread 195 in., wing loading 28.4 lb. per sq. ft., power loading 8.5 lb. per hp., weight empty 10,586, gross weight 15,297 lb., powered by 2 Pratt & Whitney Twin Wasp engines, total rated hp. 2,100 at an altitude of 7,100 ft., fuel capacity 760 gallons, normal range 2,410 miles, diameter of propeller 132 in., wing area (including ailerons) 538.5 sq. ft., total aileron area 47.5 sq. ft., fin area 18.87 sq. ft., rudder area 23.89 sq. ft., stabilizer area 73.56 sq. ft., total elevator area 42.6 sq. ft. Seats three.

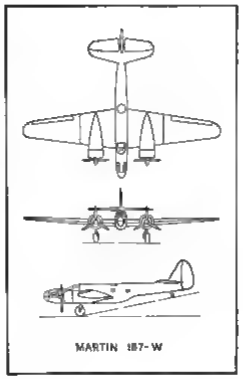
PERFORMANCE: High speed 310 miles per hour at an altitude of 14,000 feet, cruising speed 248 miles per hour, stalling speed 69 miles per hour, climb at sea level 1,790 feet per minute, service ceiling 31,500 feet.

CONSTRUCTION MATERIAL: Aluminum alloy wing spars, aluminum alloy ribs, aluminum alloy covering material, retractable type of landing gear, wheel size 30 in., smooth contour, hydraulic brakes, Oleo landing gear shock unit, wheel tail unit, aluminum alloy riveted fuselage.

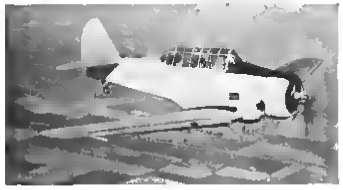
(For further specifications see table p. 115)



Landing Gear



MARTIN 187-W



NORTH AMERICAN Model NA-16-3

SPECIFICATIONS: Span 42 feet 1¼ inch, length overall 28 ft. 11¾ in., height overall 8 ft. 9 in., landing gear tread 115½ inches. Wing loading 20.73 pounds per square foot, power loading 9.56 pounds per horse power, weight empty 3,958 pounds, gross weight 5,260 pounds. It is powered by a Pratt & Whitney Wasp engine. Total rated horse power 550 at 5,000 feet, fuel capacity 111 gallons, normal range 730 miles, fuel consumption at cruising speed 23.5 gallons per hour, propeller diameter 108 inches. Wing area (including ailerons) 253.73 square feet, aileron area (total) 22.80 square feet, fin area 5.33 square feet, rudder area 13.21 square feet, stabilizer area 28.34 square feet, total elevator area 21.76 square feet. Seats two.

PERFORMANCE: High speed 206 miles per hour at 5,000 feet, cruising speed 180 miles per hour at 12,000 feet, stalling speed 66 miles per hour, climbs at sea level 1,350 feet per minute, service ceiling 23,000 feet.

CONSTRUCTION MATERIAL: Wings have aluminum alloy spars, aluminum alloy ribs, Alclad covering material. Retractable landing gear, 27 inch steel closed wheel, hydraulic brakes, Aerol landing gear shock unit, wheel tail unit.

(For further specifications see table p. 115)

that EXTRA something

• Packaged power for business machines, household appliances, electric tools, delicate controls on aircraft or medical devices...these represent the range of responsibility entrusted to Dumore motors. The same precision and special features of design that have made "Dumore" the symbol of "extra power hours" also assures extra dependability in control applications where utmost dependability is vital. Regardless of how peculiar your power problems may be, if it involves fractional horse power motors, you stand to gain by taking advantage of Dumore engineering service. Write for brochure: "Speaking of Endurance."

THE DUMORE COMPANY • Dept. 381-B • RACINE, WIS.

DUMORE MOTORS

For EXTRA Power Hours

SPECIFICATIONS TYPE EI-Y AIRCRAFT MOTOR

Series reversible 12 or 24 volts D. C. H. P. range, 1/14 to 1/20, full-load speeds, 1,600 to 200 R. P. M.; watts input, 120; duty, 10-minute; totally enclosed; weight, 3 lbs.; all screws safety-wired. (This motor was designed and built especially for aircraft use.)

NORTH AMERICAN Model NA-40A

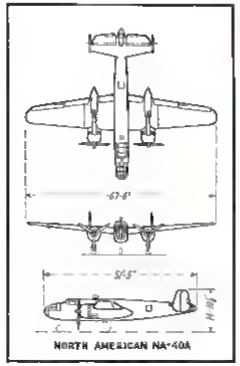
SPECIFICATIONS Span 67 ft. 6 in., overall length 51 ft. 5 in., overall height 14 ft. 10½ in., landing gear tread 232 in., wing loading 39.33 lb. per sq. ft., power loading 7.50 lb. per hp., weight empty 16,000, gross weight 24,000 lb., powered by 2 Wright Cyclone engines with total rated hp. 2,500 at an altitude of 12,000 ft., fuel capacity 910 gallons, normal range 1,728 miles, fuel consumption at cruising speed 133 gallons per hour, diameter of propeller 150 in., wing area (including ailerons) 610.1 sq. ft., total aileron area 32.3 sq. ft., fin area 40.8 sq. ft., rudder area 35.6 sq. ft., stabilizer area 92 sq. ft., total elevators 46 sq. ft. Seats five.

PERFORMANCE High speed 308 m.p.h. at an altitude of 13,000 ft., cruising speed 259 m.p.h. at an altitude of 10,500 ft., stalling speed 85 m.p.h., climb at sea level 1,880 ft. per minute, service ceiling 25,400 ft.

CONSTRUCTION MATERIAL Aluminum alloy wing spars, aluminum alloy ribs, Alclad covering material, 47 in. wheels, retractable tricycle type landing gear, emergency tail skid by-draulic brakes, mono coque Alclad fuselage.

(For further specifications see table p. 115)

Nose Wheel



NORTH AMERICAN NA-40A

NORTH AMERICAN Model NA-73

SPECIFICATIONS Span is 37 feet 4⅛ inches, overall length 32 feet 2⅛ inches, overall height 104 inches, the landing gear tread 141 inches, wing loading 32.6 pounds per square foot power loading 7.34 pounds per horse power, weight empty 5,990 pounds, gross weight 7,708 lt is powered by an Allison engine, total rated horse power 960 at an altitude of 12,000 feet. Fuel capacity 105 gallons, normal range 640 miles, fuel consumption at cruising speed 48.8 gallons per hour. The propeller measures 126 inches in diameter. Wing area (including ailerons) 235.95 square feet total aileron area 16.6 square feet, fin area 10.07 square feet, rudder area 10.80 square feet stabilizer area 28.04 square feet, total elevator area 16.46 square feet. Seats one.

CONSTRUCTION MATERIAL Aluminum alloy wing spars and ribs covering material of Alclad The landing gear is of retractable type, wheels are 27 inches of steel closed type, hydraulic brakes Aerol landing gear shock unit, Alclad mono coque fuselage.

(For further specifications see table p. 115)

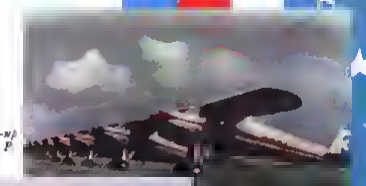
THE 1941 75-hp SILVAIRE

Future Pilots for Defense

★ Scores of America's most experienced C.P.T.P operators are training many of America's future defense pilots in modern metal Luscombe airplanes exclusively. They find that students who have been trained in these more maneuverable, stronger, all-metal airplanes, make the transition to the secondary stage more easily. Their operation costs are comparable to or less than those submitted by operators of lower powered conventional equipment. Their students appreciate the value of training in airplanes built of metal like the fighters and bombers they may some day be required to fly in defense of our shores.

★ Luscombe airplanes are preferred on every airport where they are known and flown. Priced to meet the tremendous demand for better inexpensive trainers, Luscombe airplanes are today's outstanding *value* in the lightplane field. You owe it to yourself to see and fly this modern high-performance low-cost contribution to national defense.



A typical line-up of C P T P Luscombes

Luscombes are preferred by experienced C P T P instructors

Luscombes are first choice in the light plane field for blind flight instruction

★ Your nearest dealer will gladly prove the superiority of Luscombe airplanes. He will furnish FREE literature and information on FREE FLYING INSTRUCTION or you may write Dept 4

The Birdmen's Perch

How about those Funnyboners? I want to hear more about those mistakes you made while learning to fly. Send 'em in, pals—here's your chance to confess and tell us why your instructor's hair turned white over night.

Major Al Williams, alias "Tattered Wing-Tips," Mgr., Gulf Aviation Products, Gulf Building, Pittsburgh, Pa.

FUNNYBONER DEPARTMENT

Here's a boner I pulled while learning to fly.

I'd had about 2 or 3 hours dual instruction and was practicing landings with my instructor. I'd completed several pretty good ones and was approaching the runway for another, when the instructor took over the controls.

I thought he intended to keep the controls—and he thought I'd take them right back again. The result was a very bumpy, but successful landing, with nobody at the controls at all!

Winton Smith, Mamaroneck, N. Y.

DON'T TRY THIS ONE IN YOUR BATH TUB!

The hot water tap on a bathtub will fill it in 4 minutes. The cold water faucet

will fill it in 6 minutes. And the drain in the bottom of the tub will empty it in 8 minutes.

With the drain open and both cold and hot water taps on, how long will it take to fill the tub?

YOU'D BE SURPRISED HOW YOU CAN CLEAN UP

If you remember your high school chemistry, you'll recall that one of the first things you were taught was how to use a filter paper.

Probably one of your first experiments was when you took a cloudy, muddy solution and filtered it through a rough filter paper. You found that the solution came through crystal clear, and that the filter paper was stained dark by the residue.

But then, even though your filtrate was crystal clear, you again filtered it, this time through a finer paper. And this time, though the appearance of the solution was just as clear as before, you found to your surprise, that a fine residue had been left behind on the filter paper. You'd made your solution even purer than you thought possible.

You might remember this experiment the next time you're buying oil for your plane. For though many oils look exactly alike, you'd be surprised how much extra impurity you can sometimes get out of them.

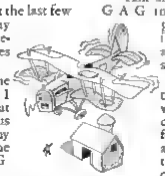
We know, because we refine Gulfpride by means of a special process—the Alchlor Process. And tests have shown that this Alchlor Process removes up to 20% more of the carbon and sludge formers found in oil!

Yes, we know that by taking the extra time and trouble, we can get a lot of *extra* impurities out of oil. That's why Gulfpride is the finest oil you can put into your motor!

THIS MONTH'S WHOPPER (4 Stars)

Dear Major:

I had an old Jenny once and for the last few years she's been setting out in my barn. Sons hated to junk her because we'd had some good times together, Jenny and me.



I was thinking about that the other day—about getting old, I mean—when I spied a story about G A G. Well, it looked like this was just the medicine my Jenny needed. So I hauled her out of the barn and filled her up with G A G. And then the trouble began.

Say, I didn't hardly have time to get out of the way before little Jenny perked right up and the next thing I know she's circling over the barn and heading off towards the city.

All day long I waited pacing up and down the barn floor, and it was long about sundown when I heard a funny kind of sputtering and there comes Jenny.

Gosh, Major, that ship looked like it had met a couple of hurricanes with a tornado in the middle and when I got her back into the barn and kind of got over being so scared I says to her:

"Jenny, I allus said you was a well behaved little ship. And you was. Now, where've you been all day?" And Jenny looked at me kind of reproachful like and she says: "Say, Pop, who fed me that G A G anyway?"

"Well," I says, "that don't answer my question. All by yourself you took off and all by yourself you spent all day in the city and all by yourself you come back again. Now what's the story?"

"Well, this is Jenny's story — Pop, I met an Army Bomber—the handsomest Army Bomber! His approach was perfect. He wiggled his ailerons rather flirtatiously and I wiggled mine back. If it hadn't been for that G A G I'd have been more of a lady!

"We glided along together—even had a couple of wing-overs. Then—then—well he settled down on a soft cushion of air and flipped his flippers invitingly. Pop, can you imagine how I felt? A dashing Army Bomber flipping his flippers at me an old Jenny! And honestly, Pop, I'd reached the hurble point so to speak. I felt like making a power dive for him, but I restrained myself and instead I just settled down too.

"Talk about speed, Pop! They must use G A G in the army too. I'm afraid I completely forgot my excellent training because after a bit of stalling around I—well—I'm afraid I skidded a little.

"And I don't care if I *am* a bit the worse for wear. Although my wings are a mite tarnished and I can't hold my nose as high as before, although my struts and spars aren't what they once were, although my landing gear has collapsed and my shock absorbers were shocked off, although my motor is dead and my prop won't go round, I still say! More power to G A G!"

D. D.

P. S. G A G don't *need* no more power!

LYON Can Help You "DO THE IMPOSSIBLE"

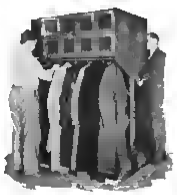
STOCK ROOMS

Lyon tool storage equipment solves the most complex tool storage problems. Protects tools. Saves floor space. Reduces tool handling delays. Maximum availability with a minimum tool inventory.

TOOL ROOMS

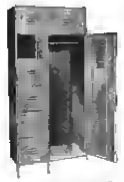
Lyon adjustable storage shelving insures last economical handling of stock and parts. Reduces fire hazards and conserves floor space.

EMPLOYEE CLOTHES STORAGE



Lyon Shoprobe (Patent No. 2,202,427). Minimum initial cost per person accommodated. Readily moved. Saves floor space—20 persons in each 12 ½ sq. ft.

2-Person Lockers. Individual compartments for two people in some cabinets. Hygienically occupied by single occupancy lockers.



7-Person Lockers. Accommodates seven individuals in floor space of 38" x 20". Individual keys for small compartments all operate large seat compartment.

PRODUCTION AND ASSEMBLY LINES

Steel Benches. Costless to buy than to build.

Assembler's Bench Bin. (Patent Applied For). A dozen parts in easy reach. Occupies only 1 square foot of bench space.

Shop Boxes. Types to meet any parts handling need.

Tool Stands. Bring tools to the job. Saves steps.

Bench Legs. Extra heavy for durability. Riveted and welded for rigidity. Economical.

Here's How Manufacturers Everywhere are Increasing Productive Floor Space and Stepping Up Production WITHOUT WAITING FOR NEW BUILDINGS, MACHINES OR TOOLS

In these days when industrial leaders are asking for the "impossible"... and expecting plant executives to deliver it ... Lyon Equipment can help solve many of the problems involved. It contributes to faster production and releases floor space by providing compact, convenient storage ... and fast, smooth handling ... of materials and tools. And—most important—you can have these production-accelerating, space-saving, cost-reducing aids NOW. Ask your mill supply distributor for details, or write Lyon for catalogs.

LYON METAL PRODUCTS, INCORPORATED

General Offices: 5802 Madison Avenue, Aurora, Illinois
Branches and Distributors in All Principal Cities

FLASH!

When you find a way to swing production into high gear by using Lyon Equipment, you can capitalize the advantage AT ONCE. Lyon shop and storage equipment is carried in stock for immediate shipment. Most orders are in transit within hours of their receipt at our plants and warehouses.

Catalogs illustrated below describe the complete Lyon line. Both your plant superintendent and purchasing agent should have these catalogs. Write today.

These Grumman fighter planes are now being produced in quantity as part of our Government's National Defense Program

GRUMMAN AIRCRAFT ENGINEERING CORP.

BETHPAGE LONG ISLAND NEW YORK

New Grumman "midwing" pursuit monoplane now being built in quantity for Great Britain's Fleet Air Arm and the United States Navy. It is powered by a 1,200 H.P. Wright Cyclone Engine, has a top speed of 350 miles per hour and a ceiling of 37,000 feet.

TIMKEN BEARING EQUIPPED

WINGS FOR DEFENSE

American military aircraft—like those engaged in the pursuits of peace—are equipped with Timken Bearing Equipped wheels for swift, smooth take-offs and sure-footed landings. Many of them also have TIMKEN Tapered Roller Bearings at other vital points such as engine rocker arms and vibration-dampening engine mounts.

During the last decade of airplane development in the United States, TIMKEN Bearings so greatly have improved ground performance that their use in the landing and tail wheels of airplanes of all types and sizes now is practically 100%.

TIMKEN
TAPERED ROLLER BEARINGS

Manufacturers of TIMKEN Tapered Roller Bearings for automobiles, motor trucks railroad cars and locomotives and all kinds of industrial machinery. TIMKEN Alloy Steels and Carbon and Alloy Seamless Tubing, and TIMKEN Rock Bits

THE TIMKEN ROLLER BEARING CO., CANTON, OHIO

THIS TRAINING *places* YOU IN AVIATION *in 4 to 24 months*

Never before has the demand for trained pilots been so urgent as it is today. Airline expansion is actually being retarded because of the acute shortage of competently trained pilots. Flight instructors are in demand everywhere. Because of California Flyers' modern fleet and proven training, it is absolutely impossible for us to supply the requests for graduate pilots.

In aviation the Master Mechanic is the man responsible for the production, operation and maintenance of the world's great air fleets. At California Flyers the Master Mechanic student receives the greatest training that prepares him for a position with airliners and aircraft plants. And it is this training that assures him immediate employment and rapid advancement.

Because the Aeronautical Engineering student at California Flyers trains in the center of modern aviation in America, in the city where half of the Nation's planes are engineered he learns the latest and only in design and engineering but in modern plant practices. Because of this advanced training the California Flyers graduate's services are in demand everywhere.

The Production Mechanic is the Aircraft builder. Because this is the largest field in aviation, the young man entering this branch has unlimited opportunities. At California Flyers the Production Mechanics student is trained to do not only one thing well, but all phases of production from metal forming to final assembly. It is this thorough training that takes him to the top.

Throughout every stage of planning and production the Aircraft Draftsman is the right hand of the men responsible for successful design and engineering of the airplane. The young man enrolling at California Flyers receives training that prepares him for the better. Because of this thorough practical training the graduate's opportunities are unlimited.

With the increased use of instruments the position of Instrument Technician has become of vital importance. At California Flyers the student trains in an active maintenance shop. It is this type of training that prepares him for the many opportunities in the Instrument field—a position in an aircraft plant, an airline, the Civil Service or he may operate his own business.

and WE CAN'T SUPPLY THE DEMAND FOR OUR GRADUATES

Yes, you're that close to a position in aviation! Four months to 24 months from the day you enroll at California Flyers, depending on the course, you will be ready for a position in aviation, a position unparalleled in opportunity. And what is more important, a position is waiting for you for ***it is impossible for California Flyers to supply the demand for its graduates.***

Why does California Flyers put you in aviation faster? Here is the answer. From the day you enroll at California Flyers you are *in* aviation, preparing to do your share in the Defense Program. No time is wasted in unrelated, academic subjects. What you get is thorough, practical, industry training geared to the needs of the aviation industry and geared to the needs of our National Defense. What is more important, this training is specified training specified by the industry to fulfill its needs.

California Flyers is not only located in the Nation's Aviation Capital but on the very airport that is the home of these famous aircraft plants.

California Flyers is one of the few schools in the country that recognizes the vital need for specialized training, the need not only for Aeronautical Engineers, but for Aircraft Draftsmen—not only for Master Mechanics, but for Production Mechanics and Instrument Technicians—not only for Airline Pilots, but for Commercial Pilots and Flight Instructors. So it is that California Flyers gives you the opportunity of choosing a particular course that best suits your natural talents, and gives you the training which in a shorter space of time fits you for a career in the particular branch of your chosen field.

Why is there such an unprecedented demand for our graduates? An important reason is California Flyers' location in the very heart of aviation in America, on the same airport with the plants of North American, Douglas-El Segundo and Interstate, on the very test field where the famous planes of Douglas, Lockheed, Northrop and Vultee have been tested and proved, in the city which is a terminus for United Airlines, Transcontinental and Western Air, American Airlines and Western Air Express. It is a school that is an integral part of this aviation picture. It is a school which through day to day personal contact works hand and hand with the industry, meeting the industry's personnel problems with men trained to its specifications. *Is it any wonder that this school cannot supply the demand for its graduates?*

California Flyers is not only approved by the United States Government for Flight and Master Mechanics Courses, selected by the Civil Aeronautics Authority for primary and advanced flight training, but it is one of the few schools chosen by the U. S. Army Air Corps to train its aviation mechanics. It is the school you, too, should choose.

CLIP THE COUPON ON OPPOSITE PAGE

"I am a California Flyers Graduate." It means something to say that. It means that aviation wants you to the extent that over 96% of all California Flyers graduates are employed in the industry and there are consistently more requests for our graduates than we can supply. It is a passport into aviation. It means also that you are a man marked to succeed like the California Flyers men before you. And that is what *really* counts.

Why does a California Flyers man stand so high? It is obvious once you have heard the complete story of this famous school. Its founders believe that aviation should be taught in a school where the student remains an individual—learning aviation as it pertains to his individual ambitions and qualifications, and by so doing he is prepared for the responsibilities of leadership. This trains the graduate to meet today's aviation problems and to contribute to tomorrow's aviation advancement. This is the way today's leaders learned. Only this way can a training program be built for the industry, on industry specifications. They believe too that the entire field of aeronautics—engineering, mechanics and piloting are all closely interwoven and that a student should train in a school that teaches all of these important divisions. Above all, they believe that aviation should be taught in an environment of aviation activity, taught where there is the greatest number of men actively engaged in aviation. This is why California Flyers is located in the heart of the world's aviation capital on the world's busiest testing field.

If this is the kind of school you would like... friendly, efficient, modern and thorough, an aeronautical school operated by practical aviation men, you will be most interested in reading the *complete* story of California Flyers in the new 64 page catalog.

• Write for new 64 page catalog, get complete information on all of California Flyers' aviation training courses, tuition and employment opportunities.

A *VETERAN AT TWO*... Back in the early twenties, when aviation was still in its adolescence, the supervisory personnel of the present Northrop Company was actively engaged in the aircraft industry. These men, who are responsible for today's Northrop planes, enjoy on average of over 16 years of aviation experience. Though its corporate existence reaches back barely two years, today Northrop Aircraft, Inc. is a veteran at two.

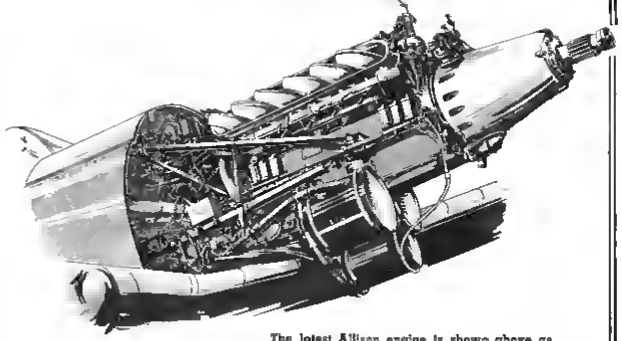
Now, when production is so all-important, this background of aviation experience accounts for the records being established at the Northrop plant. It is reflected, too, in the superior performance of Northrop built planes. This is another reason to WATCH NORTHROP.

Starting from scratch in March 1939, the greatly expanded Northrop plant will soon house more than five thousand employees. Here at record production speed are manufactured planes and plane parts for the fighting forces of five democratic peoples.

NORTHROP AIRCRAFT, INC. • AN INDEPENDENT ORGANIZATION

NOT AFFILIATED WITH ANY OTHER AIRCRAFT COMPANY

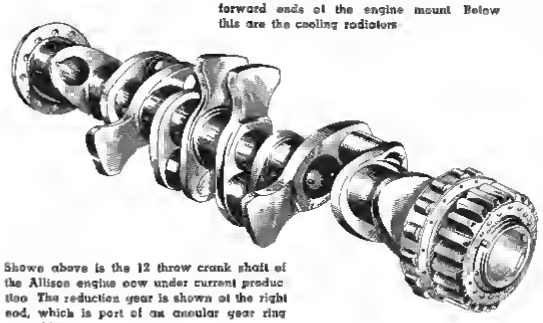
NORTHROP AIRCRAFT, INC. • NORTHROP FIELD, HAWTHORNE, CALIFORNIA, U.S.A. • CABLE "NORAIR"



The latest Allison engine is shown above as it is installed in a Curtiss P-40. Notice the method of supporting the engine from the forward ends of the engine mount. Below this are the cooling radiators.

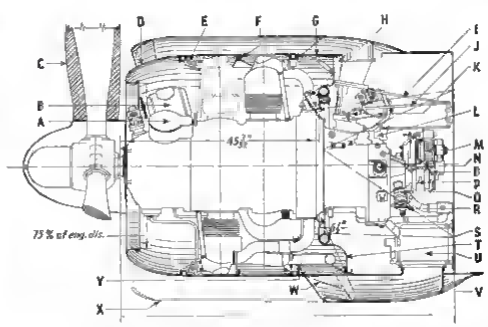
AMERICAN AIRCRAFT ENGINES FOR 1941

With sketches and photographs of engines and installations, AVIATION presents a cross section of American aircraft engines.

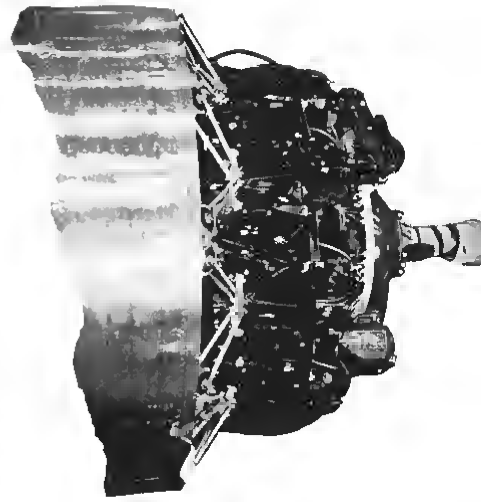


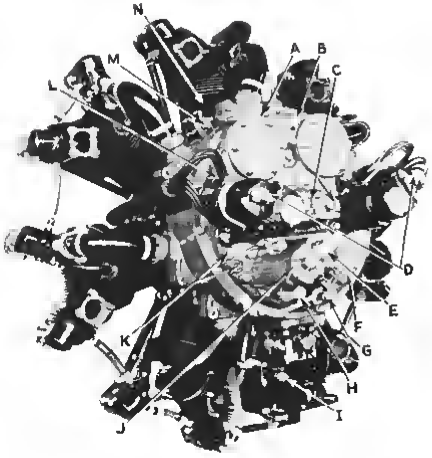
Shown above is the 12 throw crank shaft of the Allison engine now under current production. The reduction gear is shown at the right end, which is part of an annular gear ring assembly.

The Wright Duplex Cyclone engine is shown below as it is installed in the Douglas B-18 Super Bomber. Note the vibration dampening engine mount consisting of nine pairs of mountings spaced at regular intervals around engine mount ring.

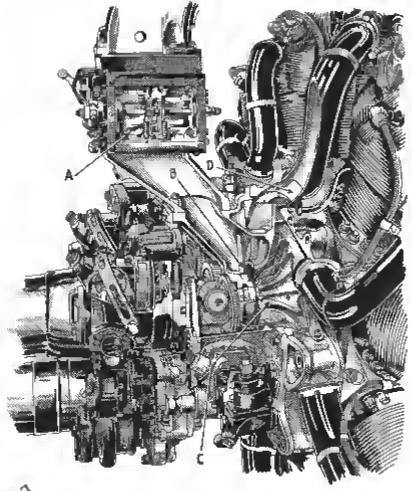


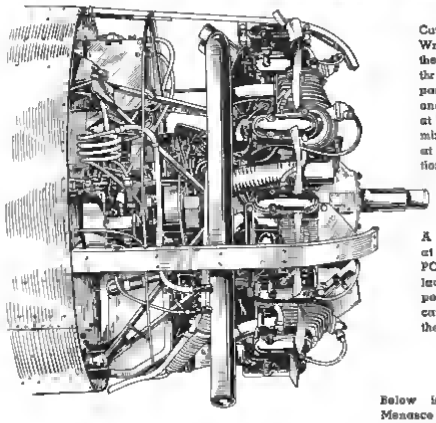
Shown above is a typical power plant installation of the latest Pratt and Whitney R-2800 single stage twin row engine. Around this is placed one of the most recently designed cowls which has caused considerable comment because of its effective cooling. The letters on the drawing refer to A—distributor; B—magneto; C—propeller cuffs; D—N.A.C.A. high speed nose contour; E—flexible cowl support ring mount; F—seal between engine baffles and cowling; G—carburetor pre-heat valve; H—rotated true view of pedestal; I—throttle control; J—mixture control; K—injection carburetor; L—supercharger speed control; M—starter; N—gun synchronizer; O—generator; P—vacuum pump; Q—hydraulic pump; R—fuel pump; S—engine mount ring; T—stamped stainless steel diaphragm; U—dual oil coolers; V—flexible seal between inner and outer diaphragm; W—location of side cowl flaps; X—alternate scoop; Y—exhaust stack slip joint front cylinders only.





The Jacobs Model L-4PT radial engine above develops 225 hp. The letters on the engine denote: A—starter pad. B—oil tank vent connection. C—tachometer connections. D—ground connections. E—oil outlet connection. F—fuel pump pad. G—oil inlet connection; H—relief valve; I—fuel inlet connection; J—cuno strainer; K—oil pressure connections; L—booster connections; M—primer inlet connection; N—breather connection (hidden).

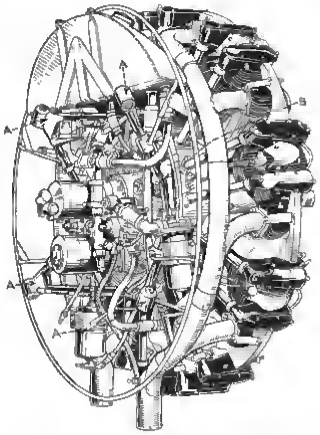


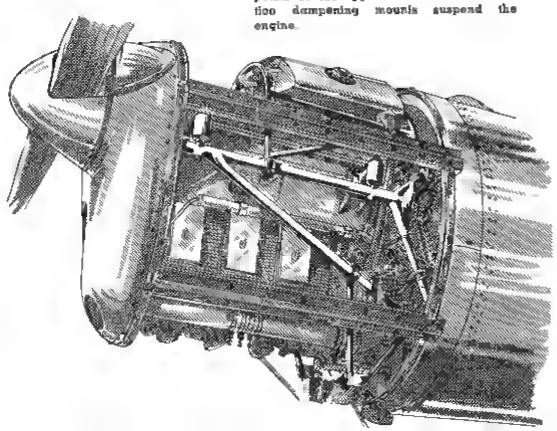


Cutting away the rear section in a Wright G-100 series engine we find the carburetor located at "A" through which the air and gasoline pass down through the intake "B" and into the supercharger impeller at "C", from here the supercharged mixture enters the cylinder intakes at "D" and then into the combustion chamber.

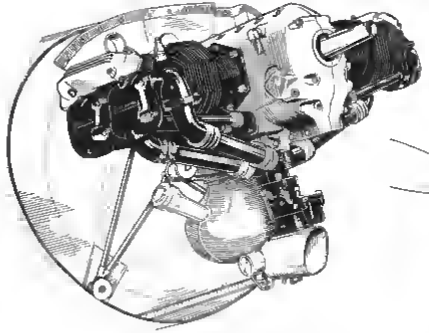
A Warner 185 hp. engine is shown at the left installed in a Harlow PC-5A. The engine mount is attached to the fuselage at four points and the engine ring is located in the drawing, underneath the exhaust ring.

Below is a typical installation of a Guiberson A-1020 Aircraft Diesel engine. Note the four engine mount attachment fittings at "A" while the engine itself is attached to the engine mount ring "B".

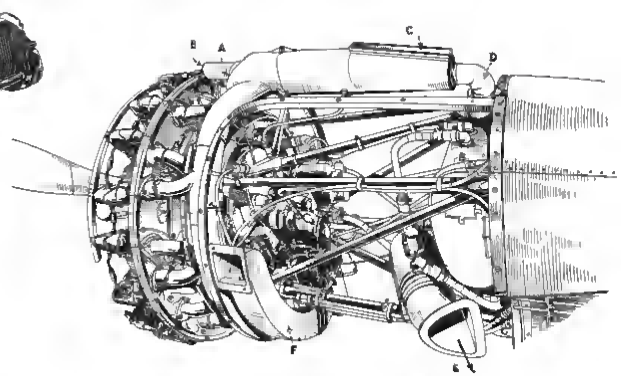




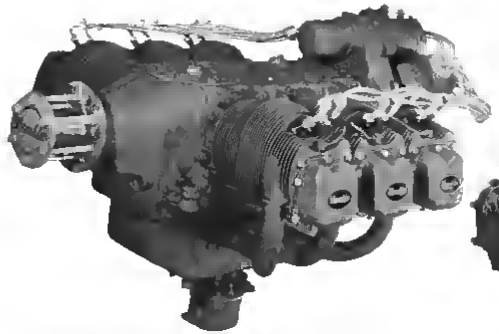
Below is a typical installation of a Menasco engine in a Ryan ST Trainer. Note the two points, with two similar points on the opposite side where vibration dampening mounts suspend the engine.



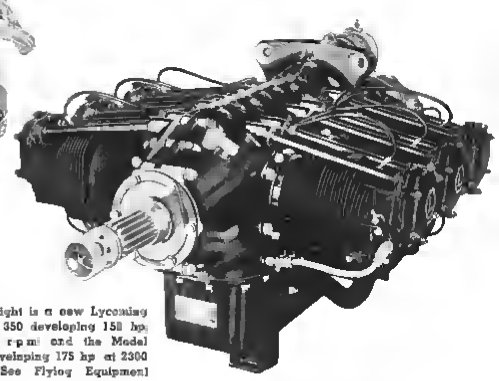
A Continental engine (above) is installed in a Luscombe Model 8A. Directly below the engine is located the oil tank.



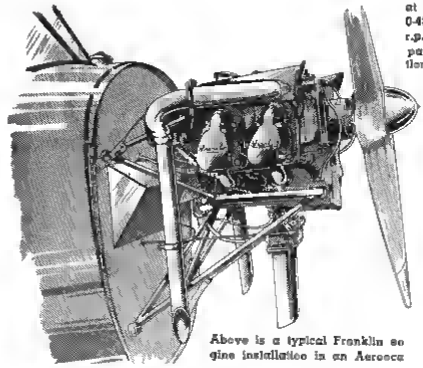
Above is a Pratt & Whitney Wasp Jr. installed in a Grumman G-21 Amphibian. "A" is the exhaust manifold with its exhaust port at "C". "B" is where cabin ventilating air enters the heating pipe which passes through the exhaust manifold and enters the cabin through "D". "F" is the carburetor air intake and "E" is the oil radiator outlet.



Above is the recently announced Franklin six cylinder Model 6AC-298-F3 engine of the latest design. This engine develops 130 hp. at 2550 r.p.m.

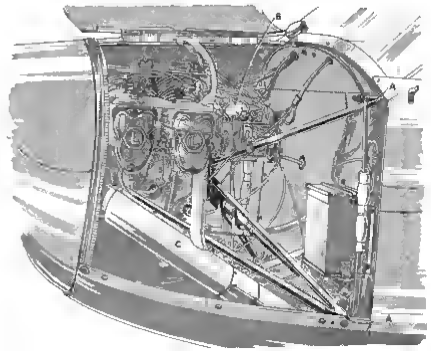


Above right is a new Lycoming Model O-350 developing 158 hp. at 2500 r.p.m. and the Model O-435 developing 175 hp. at 2300 r.p.m. (See Flying Equipment page 139 for complete description)



Above is a typical Franklin engine installation in an Aeronca

Below is a close-up showing a dual ignition 75 hp. Lycoming engine installed in a Funk Model L. The mount is attached at "A" and the engine is supported at "B" and at a similar point at the forward end.



SWITLIK

QUICK ATTACHABLE

Safety Chute

COSTS NO MORE THAN A FIXED PACK

The QUICK ATTACHABLE feature is a hit! It enabled pilots to combine freedom on the ground with safety in the air.

Weighing less than a suit of clothes, the Switlik *harness* is worn independently from the pack. You enjoy comfort and freedom of movement not possible with any other make of chute. Adopted as standard by U. S. Navy, Coast Guard and many foreign governments.

Keeping the *pack* in the plane seat or back saves it from wear and tear—and it's right there ready to attach when you climb in.

Switlik *Quick Attachable* Parachutes, available in three models—Seat, Back and Chest, to conserve headroom or legroom.

SWITLIK 1941 HANDBOOK *Mailed Free*

Now ready—Switlik 1941 Parachute Handbook, fully illustrated instructions on care and handling; also specifications and descriptions of all Switlik models. Mailed free on request.

VALUABLE FRANCHISES AVAILABLE

World-wide reputation of Switlik Safety Chutes is rapidly increasing the already wide-spread demand. New opportunities constantly arise for responsible and properly equipped firms to act as Switlik *factory representatives* to handle our business in their respective areas. Correspondence invited.

Legroom! . . . Headroom! . . . and a seat that doesn't rock! You'll be pleasantly surprised by these added advantages of the thin, comfortable, flat bottomed seat pack and light weight harness of the Switlik *Quick Attachable* Safety Chute.

Place the pack in your seat and go about your chores unhampered. When you're ready—climb in, snap only two connectors—and your chute is *attached.*

Cubs and most light planes are especially provided for by the Switlik *Quick Attachable* Back Pack. Thin pack sinks snugly into chair back, retaining normal legroom and head room.

Civil Aircraft Footnotes. These refer to tables on pages 105 and 106 also.

1 Plastic type.
2 First minute.
3 Available as seaplane or skiplane.
4 Also available with 170 gal. capacity.
5 Also available with 121 gal. capacity.
6 Also available with 210 gal. capacity.
7 Also available with 260 gal. capacity
8 All range figures with 45 minute reserve fuel.
9 Brake Rubland Wendt mechanical shock strut Goodrich-Wendt rubber spring. (some present).
10 Tail unit 360° swiveling Servite-tred service caster Buffalo spring.
11 Tricycle.
12 Retractable, steerable nose wheel.
13 At most economical speed.
14 Plastic bonded wood veneer
15 Rm. Rt.
16 On bearing gear
17 At 60% full power.
18 At 60% power
19 Due Landing.
20 Rotor diameter.
21 Rotor due.
22 Trim flaps.
23 Step tapered elliptical.
24 Steerable and castoring.
25 High pressure.
26 Structure approved for ski-plane.
27 Frankl a 80 and 90 amply weights inside electric starter and motor driven generator
28 Steerable tail wheel.
29 Ship is metal-covered to rear cabin; center section flap sliding hatch counter-balanced aileronn trimming tabs on elevators.
30 Cantilever
31 Oil and spring.
32 Plastic bonded, wood veneer web.
33 Plastic bonded.
34 May be equipped with Piper S-1000 skis.
35 Radio installation available
36 Also as photographic plane or with floats or skis.
37 Also available with 45 gallon and 52½ gallon capacity.
38 Pressurized V/L, actual hub speed 169 mph.
39 Also available with 130 gal capacity
40 Also available with 21 in. circumflum or 23x10-4 wheels with hydraulic brakes.
41 With 2-position propeller
42 All range figures with 15% reserve fuel.
43 Navy model.
44 7.50 x 10 front.
45 Steerable tail wheel available.

Geared Power
for the PIPER CRUISER

QUICKER TAKE-OFF ★ FASTER CLIMB ★ EXTRA ECONOMY

LYCOMING
Geared "75"

Lycoming *Geared* "75" Installed in the Piper Three-place Cruiser

Whether you buy a Piper Cruiser for passenger carrying, pervate flying or student instruction you'll like power by the Lycoming *Geared* "75". Other air-cooled, horizontally opposed Lycoming engines are available in direct-drive models of 50 to 175 horsepower, single or dual magneto ignition with provision for *mechanical or electric starter*, generator and fuel pump drives.

A Full Load "Gets Out in a Climb" Behind a Lycoming *Geared* "75"

The quicker take-off and faster climb of the Lycoming *Geared* "75" is most apparent under full-load conditions—when you have extra need for plus performance

Contractors to the U. S. Army and Navy

YOU who buy or fly the Piper three-place Cruiser will want to consider the superior performance and dollars-and-cents savings in operating costs of the Lycoming *Geared* 75-horsepowet engine. Ideally suited to the Cruiser's greater load-carrying capacity, the Lycoming *Geared* "75" develops its horsepower faster. Consequently, take-off is quicker and rate-of-climb better. Higher engine speed, with a slower-turning, larger-diameter propeller, makes for incomparable smoothness. The tecognized economy of higher piston speeds is reflected in amazingly low gasoline consumption . . . approximately only 4¾ gallons per hout at cruising! Fly this dependable Lycoming engine in the Piper Cruiser and feel the difference *geared* power makes.

FREE LITERATURE:—on Lycoming 50 to 75-horsepower light-plane engines may be obtained from all Piper, Aeronca, Funk, Luscombe, Porterfield and Taylorcraft dealers Or write Lycoming Division, Dept. AA21, Aviation Manufacturing Corporation, Williamsport, Penna., U.S.A. . . . Cable address Aviatcor

FOUR NEW LYCOMING AIRCRAFT ENGINES

100-125-150 AND 175 HORSEPOWER

With the addition to the Lycoming family of these four new "stars of the skyways" you now have your choice of power by Lycoming horizontally opposed engines in 50, 55, 65, 75, 100, 125, 150 and 175 horsepower. These brilliant new engines are born of a tradition of excellence . . . consecrated to engineering standards attained through years of building to the high specifications set forth by America's armed forces. A Lycoming engine in the airplane you buy, whatever its horsepower, is an assurance of dependability, with seasoned experience and skilled workmanship reflected in every operation, from the designer's board to the final connection of the last spark plug.

FREE LITERATURE: We shall be glad to send you complete details and specifications of the new Lycoming 100, 125, 150 and 175-horsepower engines. Address Lycoming Division, Department A21, Aviation Manufacturing Corporation, Williamsport, Pennsylvania, U S A. Cable address Aviatcor

[1] Has camera hatch in hull bottom for aerial mapping. Complete set of flight and engine instruments. Provision for installation of drifting equipment. Accessories as in G-31A.

[2] Main landing gear, smooth contour; nose wheel 10 in.

[3] Steerable and swivelable.

[4] Plastic.

[5] Full retracting electric.

[6] Six machine guns, self-sealing tanks; all additional information is restricted.

[7] First 35% of wing, spot welding.

[8] Critical altitude.

[9] Main float and two wing floats.

[10] Front section tubular steel frame and metal panels; rear section aluminum alloy semi monocoque.

[11] Total capacity, including "overload" fuel — 190 gallons.

...raft Footnotes

Total capacity including overload fuel — 340 gallons.
Cleveland Pneumatic Tool Co.
At 75% rated power
For gross weight less ½ fuel, power off
This airplane will accommodate 10 models of engines made by 6 American engine manufacturers [130 hp. (Fletcher A-460 7-cyl. Radial) to 285 hp.]
65% power
Blade loading.
Blade area.
Fuel load up to 350 gallons available
Available in range 320-420 hp. with variable military equipment which may modify weights and performance.
Available in range 225-320 hp., not available with radio, armament provisions of photographic equipment.
Navy Model
Convertible.

IS YOUR MATERIAL HANDLING SYSTEM *Improved* TO ITS HIGHEST EFFICIENCY TO MEET NATIONAL DEFENSE NEEDS?

Model "TNN" Tractor with pneumatic tires. Has powerful spur gear drive, exceptionally compact and easy to maneuver. Rated DBP capacity 485 lbs. normal—2000 lbs. ultimate

Model "LO 5"—For heavy-duty top-performance and efficiency to handle 10,000-lb. skid loads. Has standard platform 60" long, 26" wide 11" high with 5" lift. Speed-O-Matic Drive control, Equa-poised drive and Dyna-trol lift units.

TRADE **AUTOMATIC** MARK

That's an important reminder at the start of 1941 because more than ever before every industry will be called upon to give unrelenting and timely support to the National Defense Program by meeting contract schedules

This means you must have the highest efficiency in the movement and storage of materials to cope with your increased production demands

That's where "AUTOMATIC" is prepared to perform its part in this program by furnishing you with proven equipment to give your system top-performance and low-cost materials storage and transportation. Industrial research over the past few years will give you the benefit now, without experimenting, of the latest and most satisfactory types.

The most popular standard type "AUTOMATICS" are illustrated here. So write, 'phone, or wire for complete details or for an "AUTOMATIC" representative to discuss your material handling problems now

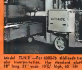
AUTOMATIC TRANSPORTATION CO.
DIV. OF THE YALE & TOWNE MFG. CO.
83 W. 87th St. CHICAGO, ILL.

Model "THTF L"—Fork truck offers new opportunities for lowest cost unit load handling and storage on pallets. Capacities 3000 to 7000 lbs. Standard telescopic lift 119"—Collapsed height 83" for box car operation.

Model "CHTF"—Light-duty fork truck designed expressly for light unit load operation. Capacities 1000 and 2000 lbs. Has full telescopic fork lift 120"—Collapsed height 83". Exceptionally compact for box car operation and narrow platform or aisle maneuvering

Model "LN 3"—For speedy transportation and placing of 6000-lb. skid loads. Has standard platform 55" long 27" wide, 10¾" high with 6" lift—Spur gear, drive and lift units—Rotor-Brush control system.



Model "TLN 3"—For 6000-lb. skidloads tiering plus transportation. Has standard platform 88" long 27" wide 10¾" high, 60" lift

Model "TLO-5"—For heavy duty transportation plus tiering of 10-000-lb. capacity skid loads. Has standard platform 60" long 26¼" wide 11" high with 60" lift. The very latest in electrical control—construction styling and performance efficiency

Model "EN-2"—Exceptionally speedy and efficient for ramp operation. Equipped with pneumatic tires for outdoor service. Platform deck 100" long 51" wide 29" high. Has heavy-duty spur gear drive—Hand wheel steer and Rotor Brush control.

WHEN YOU BUY TRUCKS · · *Buy* "AUTOMATIC"

POSITIVELY GUARANTEED

to handle any snow conditions that will ever occur on any Airport!

KLAUER MANUFACTURING COMPANY, Dubuque, Iowa

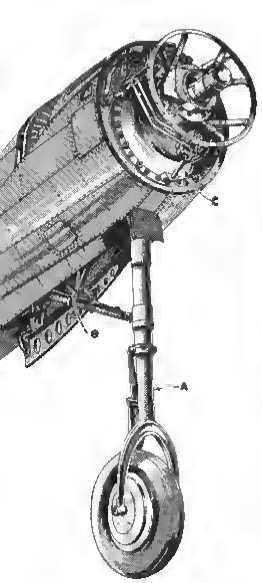
One of the many Snogos keeping America's airports clear. These machines have demonstrated their ability to clear up to 11,800 ft. runways averaging 100 ft. in width and 6 inches deep in snow.

There is a Snogo for every budget

There is a complete line of Snogos from a 1½ ton truck to the largest four wheel drive type of truck.

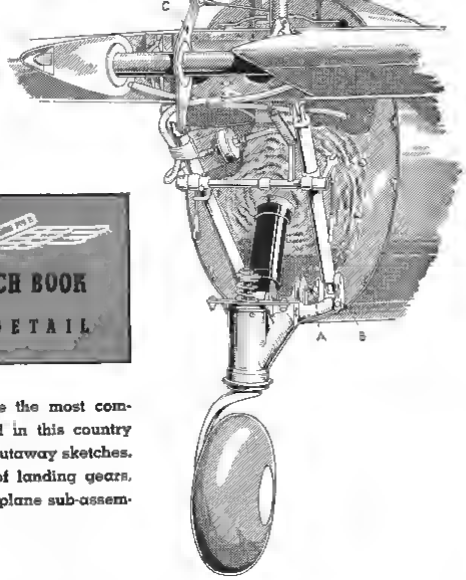
SNOGO

For Complete Snow Removal



AVIATION SKETCH BOOK OF DESIGN DETAIL

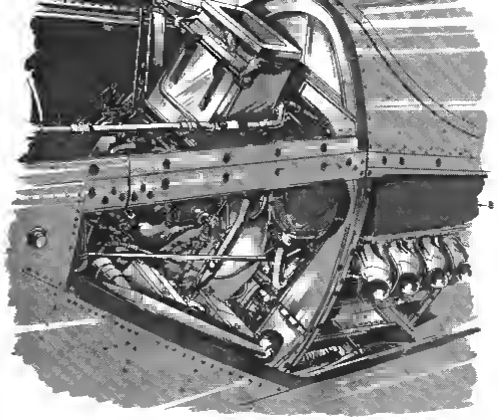
AVIATION once again offers the most complete presentation of its kind in this country of perspective drawings and cutaway sketches, including structural details, of landing gears, fuselages, armaments and airplane sub-assemblies.



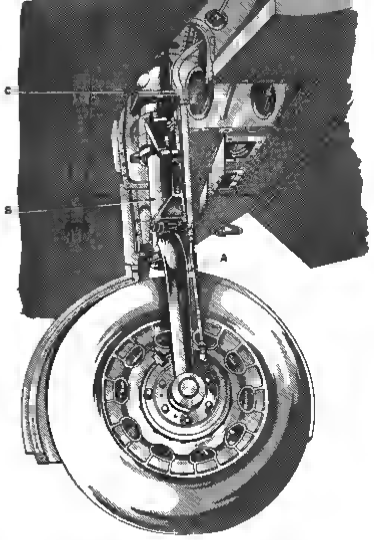
The nose wheel (above) of the Bell P-39 Airacobra is mounted far forward in the ship. The shock is taken by the Oleo at "A" with the torque scissors connected in the top and bottom of this section. Retraction is made by the mechanism at "B" "C" is the gear transmission housing where the drive shaft from engine comes in at the bottom so that propeller shaft is in the center of the ship.

The tail wheel unit (left) of the Vought-Sikorsky V-143 is of the fully retractable type hinged at "B", mounting a 19½ in. streamlined tire. The wheel is steerable through range of rudder movement by "A", but is automatically released at greater angular movements so that it will swivel freely throughout the remainder of 360 deg. An anti-vibration device is incorporated in the swivel mechanism. "C" is the elevator control.

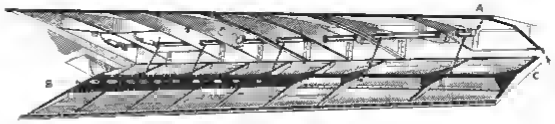
The landing gear (below) of the Fleet wings Trainer Model XBT-12 is mounted to the main wing spar by four sets of two bolts each, "B". The shock strut is attached to the axle through the large steel fitting at "A" "C" is where the outer wing panel is joined to the center section.



The Allison engine installation in the Bell P-39 Airacobra (above) mounts the air intake to the carburetor and supercharger at "A". The ship is so compact that there is but a small clearance between the cylinder heads and the outer section at "B".

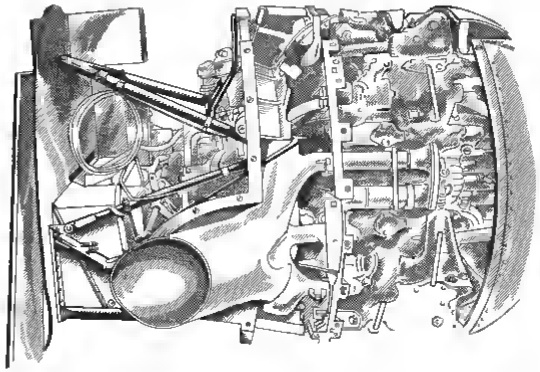


The landing gear of the Airacobra (above) takes the main load through the arm at "A" and the shock at "C". It is hinged just above point "C" and the wheels fold inward towards the center of the ship.

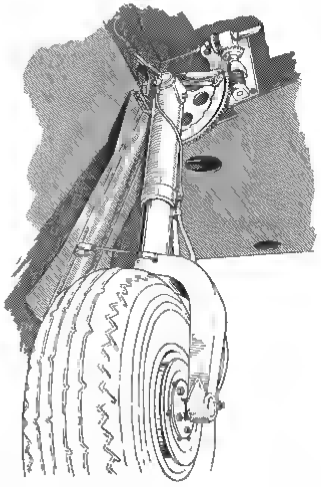


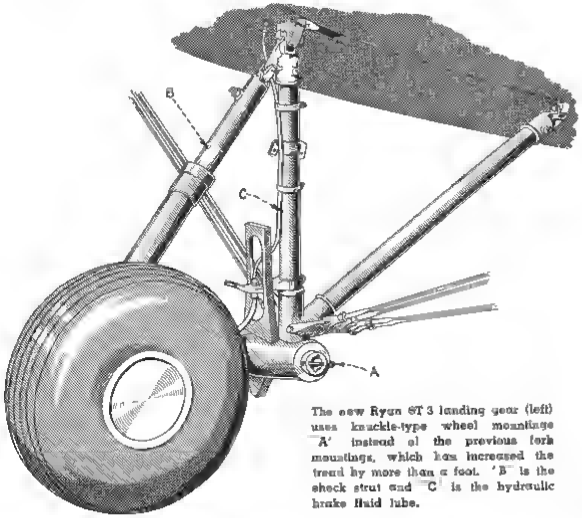
The wing flaps on the Airacobra are operated by means of the torque tube at "A". The flap has one center main spar at "B" with a piano hinge at "C".

The engine mount (below) of the Vought-Sikorsky V-143 consists of a welded chrome-molybdenum steel tube framework attached to the fuselage forward main frame at three points and to an auxiliary supporting structure at two points. This auxiliary structure, which is also of welded chrome-molybdenum tubing is in turn attached to the fuselage forward main frame at five points.

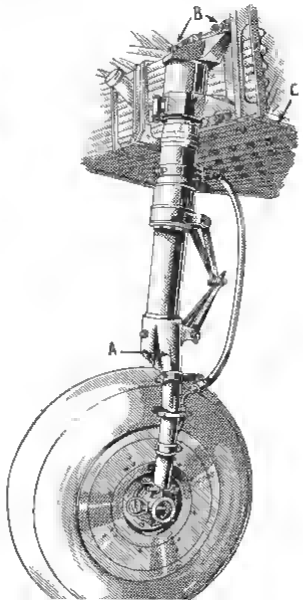


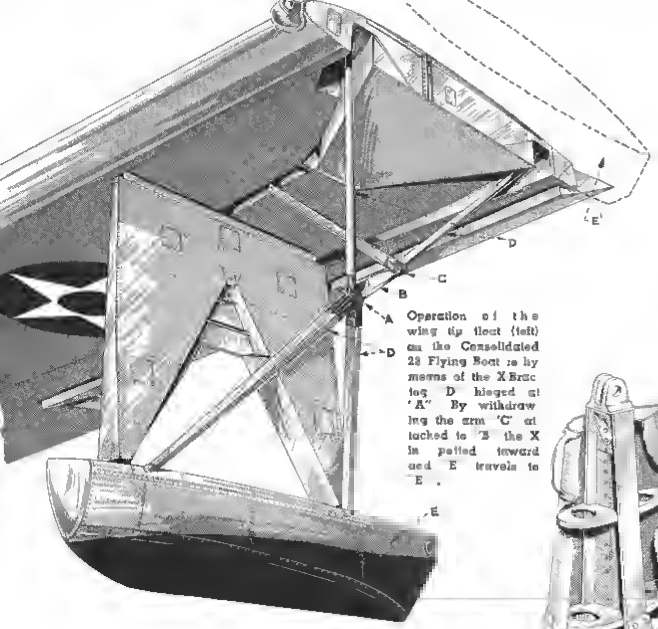
The landing gear of the Sunmit Model HM 5 (below) is retracted by means of the worm and quadrant gear. The worm is hand operated by the torque tube from the fuselage and an ingenious shock cord counter balance relieves any load from the pilot.



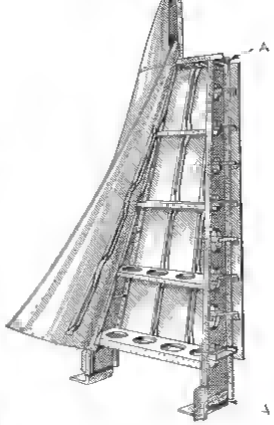


The new Ryan ST-3 landing gear (left) uses knuckle-type wheel mountings "A" instead of the previous fork mountings, which has increased the tread by more than a foot. "B" is the shock strut and "C" is the hydraulic brake fluid tube.

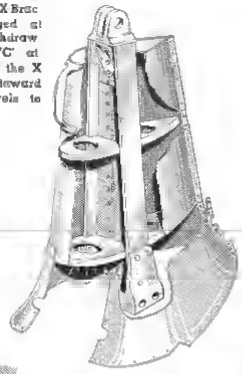




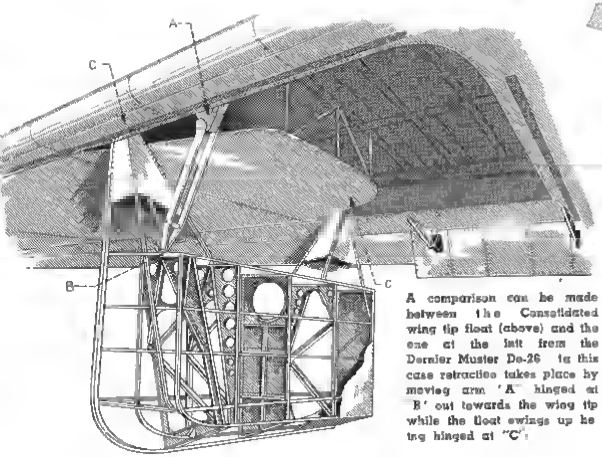
Operation of the wing tip float (left) on the Consolidated 28 Flying Boat is by means of the X Brace leg D hinged at 'A'. By withdrawing the arm 'C' attached to 'B' the X is pulled toward and E travels to E'.



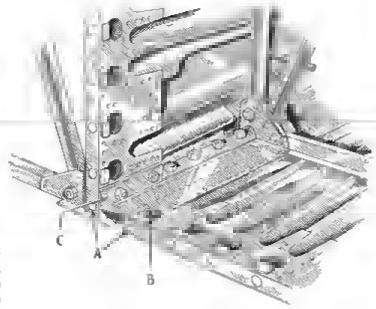
The fin of the Vought-Sikorsky V 143 (above) is of cantilever construction rigidly fixed to fuselage. It is of metal beam and rib construction with metal covering. The hinge line for the rudder is along 'A', and the upper portion of the fin above the top letter 'A' is removable.



The Navy float No. 68 utilizes the strut at the left in its attachment to the fuselage. It consists of one main beam, to take the stress, encased in a fairing. Note the handle for carrying.

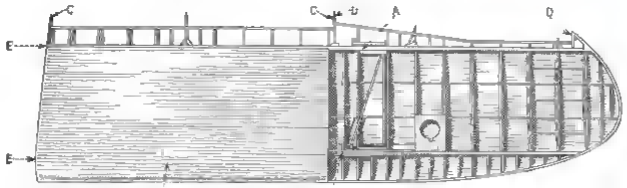


A comparison can be made between the Consolidated wing tip float (above) and the one at the left from the Dornier Muster Do-26. In this case retraction takes place by moving arm 'A' hinged at 'B' out towards the wing tip while the float swings up being hinged at "C".



The outer wing panel (above) of the Fleetwings Trainer Model XBT-12 is attached to the center section by means of bolts inserted through holes "A". From outside opposite "B" nuts are then attached. "C" is the joint of the main wing spar.

The outer wing panel of the Howard DGA 15 (right) is covered with mahogany plywood "B". At points "A" are chrome-molybdenum strut fittings. "D" are the aileron hinges and "C" flap hinges. "E" are the chrome-molybdenum attachment fittings.



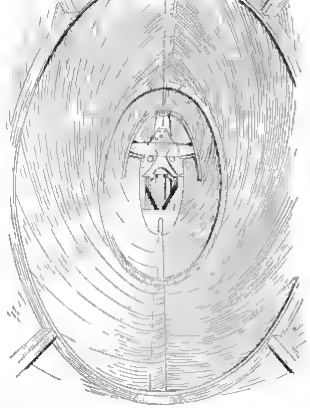
VICKERS

HYDROMOTIVE CONTROLS

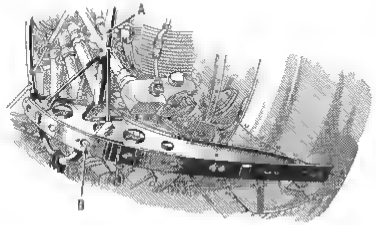
Foreshadow the future in HYDRAULIC DESIGN

. . . here shown are the latest developments in hydraulic equipment for aircraft . . . they are better designed products, with which the full advantages of hydraulic operation may be gained . . . they are precision products, engineered and produced in the plant of America's largest manufacturer of power hydraulic devices.

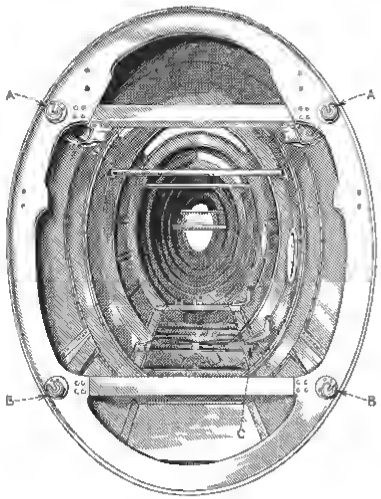
VICKERS *Incorporated*
1462 OAKMAN BLVD.
DETROIT, MICHIGAN

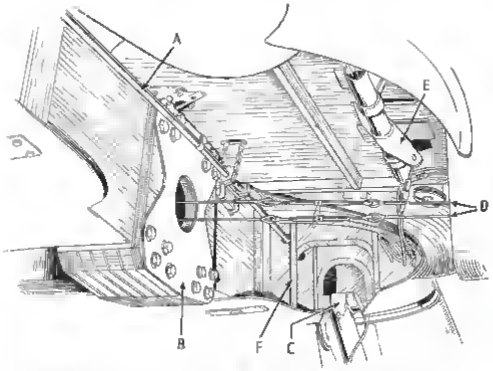


(above) View looking aft showing method of molding Summit HM-5 fuselage. Note join lines on top and bottom and accessibility of tail section for inspection.



The fuselage of the Ryan STA (below) is of semi-monocoque construction with four main longerons. The upper ones at 'A' the lower ones at 'B'. The forward seat is installed at 'C' with a duplicate installation immediately behind.

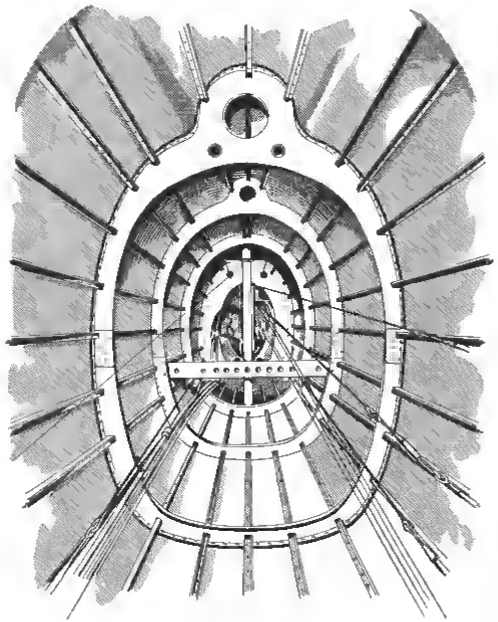




(above) View underneath Summit HM-5 showing 'A' landing gear retracting torque tube 'B' the main spar fitting (static tested to 250 000 lb. bending load) "C" landing gear knee and gear quadrant. 'D' rudder cables. "E" the stick control elevator horn and "F" the molded gear well rib for landing gear retraction.

The cowl of the Fleetwings Trainer Model XBT-12 (left) is attached to the mounting ring 'A' by means of the assembly 'B' attached at four points around 'A' by means of Dzus fasteners. The cowl sections are easily removed for engine inspection.

Fuselage of the Vought-Sikorsky V-143 (below) is of semi-monocoque construction with channel type frames spaced at approximately 14" intervals supporting outer skin covering. The skin is supported longitudinally by extruded aluminum alloy stiffeners spaced approximately 5" apart. The longitudinal stiffening angles are held in place by the same rivets which tie the side plates together, so that each skin plate is stiffened along each edge.



DESIGNERS
MANUFACTURERS
PILOTS
Military Procurement OFFICIALS

Investigate the safety value, efficiency and economy of the Fulton Glare Shield. Blue prints and samples gladly furnished.

ALREADY in use by several major aircraft builders, the Fulton Glare Shield is on its rapid way to a "standard equipment" classification for all types of planes. It is a practical aid to better visibility under all conditions where dazzling reflections or blinding glare create *flying* or *landing* hazards.

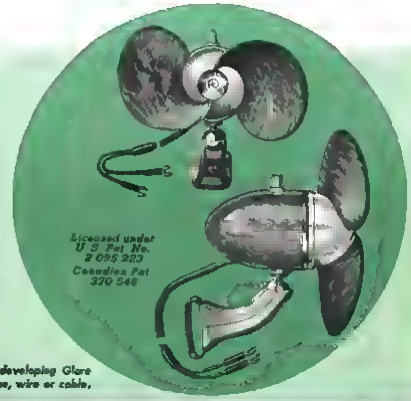
The tough, clear plastic, transparent green blade measures 15" x 8" and is instantly adjustable to any desired position. Folds out of the way when not in use. Extension arm and bracket operates on two ball-and-socket friction joints ... one at point of attachment; one at blade.

The Fulton Glare Shield has been developed for aircraft use by engineers who have had years of experience in this specialized field.

Better Visibility
also calls for the **FULTON**
De-Misting and Defrosting **FAN**

This compact, 6-inch rubber bladed fan is a valuable aid in keeping windshield and cock-pit windows free of frost and condensation under varying atmospheric conditions. Also useful as auxiliary ventilating and cooling equipment. Ball-and socket neck permits full sweep of air stream in any direction desired. Two-blade design for greatest efficiency and visibility.

Universal type, curved bracket provides adequate leg clearance and permits mounting on base plate, in choice of four directions, at any point where attached. Specially wound, streamlined motor . . . 2 speeds.



Our Engineering Department will cooperate with you fully in developing Glare Shields and Fans to meet your specific requirements. Write, phone, wire or cable.

THE FULTON COMPANY 1912 S. 82nd St., Milwaukee, Wis.

"Wonder where I'll be a year from Today?"

Why not start controlling the wonder and guesswork in your future by preparing for an important career in the great and growing modern aviation industry?

DO YOU have a good educational background—high school or better? Are you alert and serious-minded, and do you want a career? If so, here is news for you: The Boeing School of Aeronautics is helping just such young men as you to use valuable school years as a foundation for a thorough training for successful aeronautical careers. Its graduates are at work today in 48 different organizations. Prepare to join them. Use the coupon.

BOEING SCHOOL GRADS MAKE GOOD!

Boeing School graduates are at work today in 48 different organizations

8 Important Facts About Boeing School

1. **Founded and operated by the world's most experienced air transport organization (United Air Lines).**
2. **Located right on the 890-acre Oakland, California, Airport—where students meet and watch the men busy in positions for which they are studying.**
3. **8 career courses to choose from—33 subjects.**
4. **A school that is U. S. Govt-approved in flying, mechanics, and as a repair station.**
5. **17 modern shops and laboratories.**
6. **8 different types of trainking planes.**
7. **41 competent instructors—small classes.**
8. **All-year flying weather.**

Let the coupon below be your next step. Send it at once. An overwhelming proportion of all Boeing graduates are employed.

Boeing School of Aeronautics

UNITED AIR LINES — A DIVISION OF UNITED AIR LINES

ENROLLMENT PERIODS: MARCH, JUNE, SEPTEMBER, DECEMBER

CAREER COURSES One specially designed to fit you in chosen field in aviation. Check the course or courses you are most interested in.

Courses requiring High School only
- ☐ Airline Pilot and Engineering
- ☐ Airline Operations and Engineering
- ☐ Airline Mechanic and Operations
- ☐ Aeronautical Engineering

Courses requiring 2 yrs. of college
- ☐ Airline Mechanic
- ☐ Aircraft Sheet Metal
- ☐ Private Pilot
- ☐ Air Transport Engineering
- ☐ Airline Pilot Course

Courses for engineering graduates only
- ☐ Airline Technician
- ☐ Airline Meteorology

Courses requiring special training
- ☐ Special Airline Pilot
- ☐ Instrument Rating

Note: Link trainer and modern radio multi instruction available to students in all courses.

Full credit is allowed for flight instruction sponsored by the Civil Aeronautics Board

Boeing School of Aeronautics
2021 Hangar No. 3
Airport, Oakland, California

GENTLEMEN: Please mail me—without charge—the Boeing school descriptive booklet containing complete information on the school and describing in detail the courses I have checked at the left.

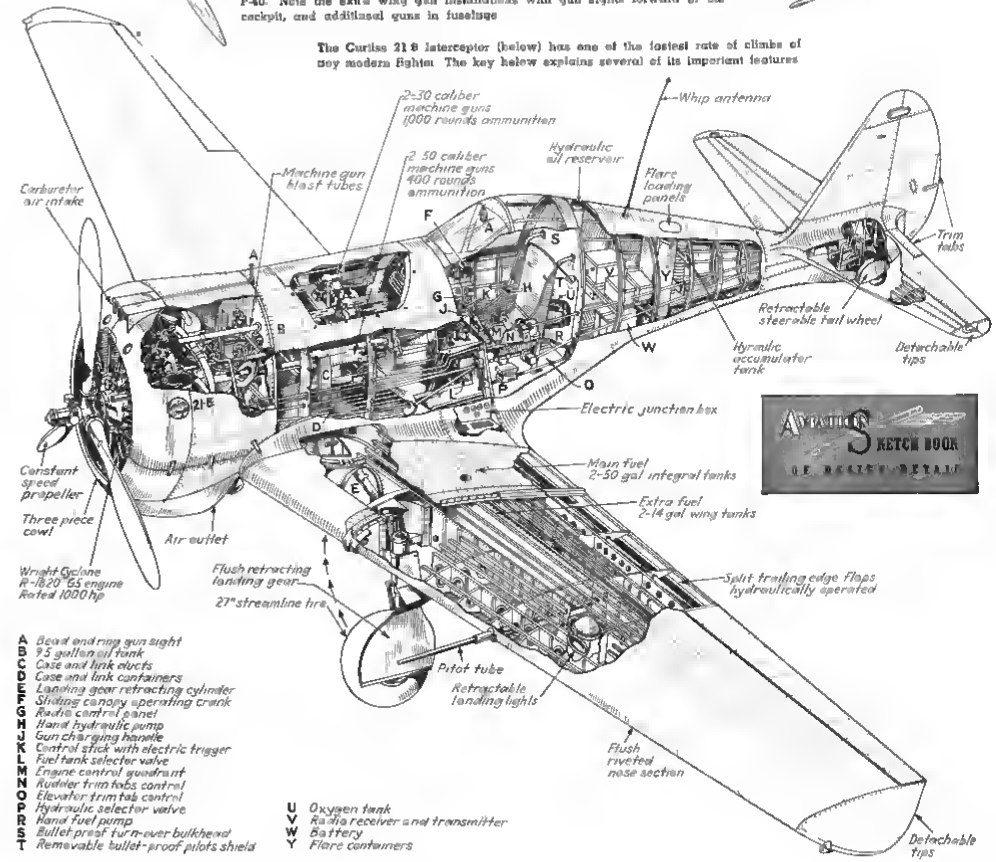
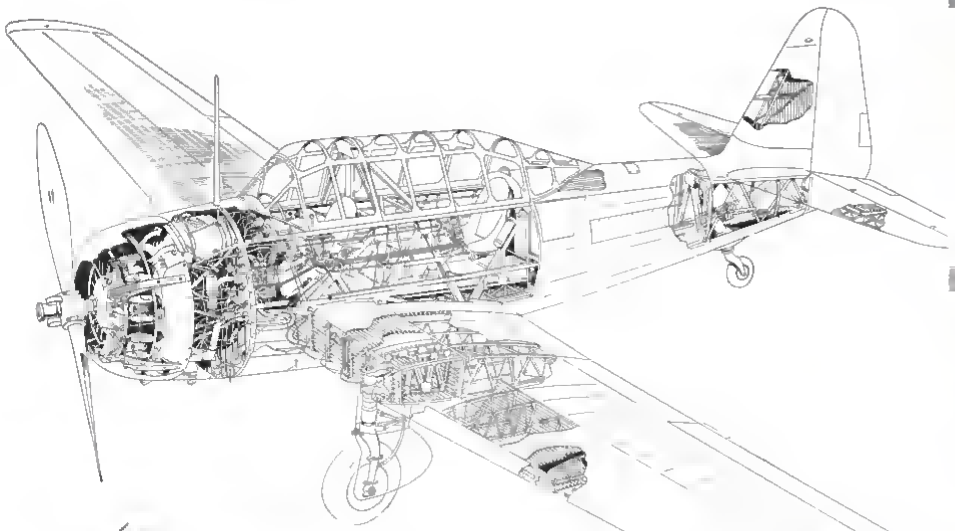
The Curtiss Hawk 81A (above) is the export version of the well-known Curtiss P-40. Note the extra wing gun installations with gun sights forward of the cockpit, and additional guns in fuselage.

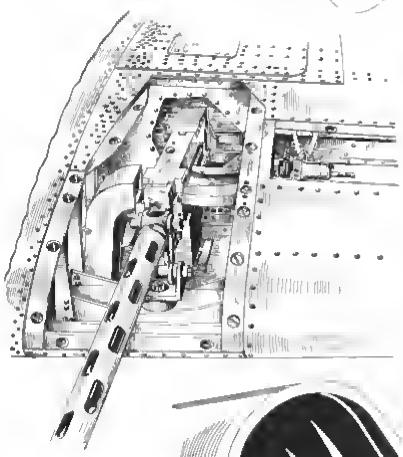
The Curtiss 21 8 interceptor (below) has one of the fastest rate of climbs of any modern fighter. The key below explains several of its important features.



A Bead and ring gun sight
B 95 gallon oil tank
C Case and link chutes
D Case and link containers
E Landing gear retracting cylinder
F Sliding canopy operating crank
G Radio control panel
H Hand hydraulic pump
J Gun charging handle
K Control stick with electric trigger
L Fuel tank selector valve
M Engine control quadrant
N Rudder trim tabs control
O Elevator trim tab control
P Hydraulic selector valve
R Hand fuel pump
S Bullet-proof turn-over bulkhead
T Removable bullet-proof pilots shield
U Oxygen tank
V Radio receiver and transmitter
W Battery
Y Flare containers

AVIATION'S SKETCH BOOK OF DETAIL DETAILS

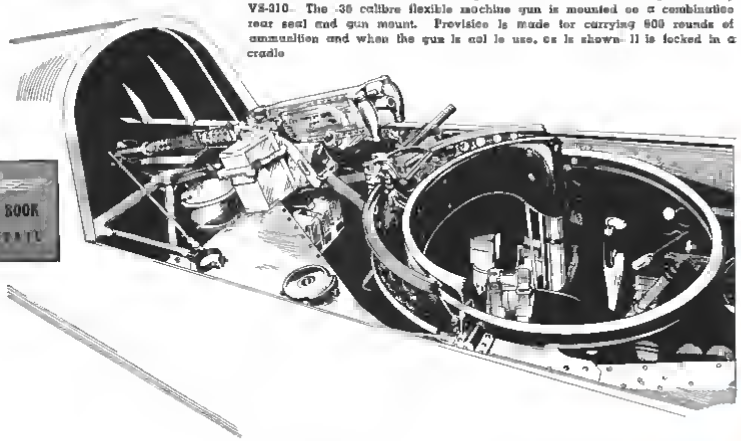




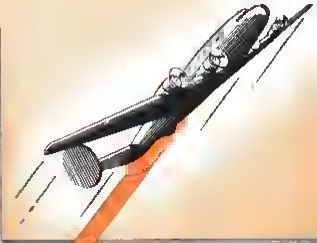
The Fleetwings Trainer Model XBT 12 (above) is of almost 100%-stainless steel construction. It has a double spar wing center section and a single spar outer wing panel which is detachable just outward from the landing gear. The ship is extremely sturdy in construction and affords exceptionally good visibility to facilitate student instruction. Note the use of corrugated stainless steel to take the main loads in the wing and tail surfaces. (See pages 120, 122, and 124 of the Sketch Book for additional detail drawings.)

The .30 calibre machine gun (left) is installed in the Republic EP-1 Pursuit and is capable of carrying 1000 rounds of ammunition. The container at the right is the ammunition box feeding cartridges into the gun through the chute. The link ejection chute is located just to the left of the gun. Note that the gun has had to be inserted through a hole in the wing spar.

Below is a view of the flexible gun installation in the Vought Sikorsky VS-310. The .30 calibre flexible machine gun is mounted on a combination rear seat and gun mount. Provision is made for carrying 600 rounds of ammunition and when the gun is not in use, as is shown, it is locked in a cradle.

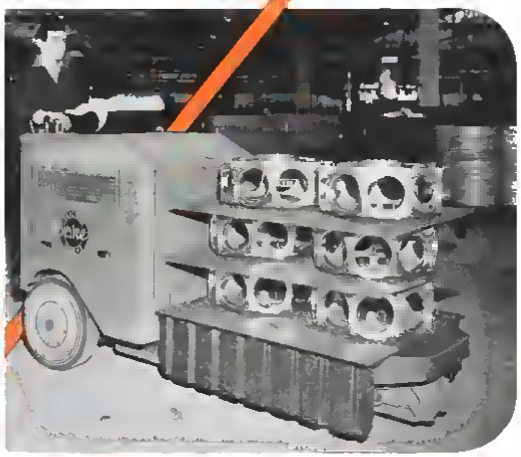


BAKER TRUCKS
step up production in aircraft plants



BAKER TRUCK AT NORTH AMERICAN (Right) Changing and moving dies is a much faster, simpler and safer operation with this 6000 lb. capacity Hy-Lift Truck with die-pulling winch, in service at the North American Aviation plant at Inglewood, California.

BAKER TRUCK AT WRIGHT AERONAUTICAL (Below) Six radial engine crankcases are handled easily with this Baker Low-Lift Elevating Truck — one of 8 in service at the Wright Aeronautical Corporation, Paterson, N. J.



To the manufacturer already taxing his plant capacity and still trying to increase production, Baker Trucks provide a ready answer. In Aircraft, particularly — where plants are vast, parts bulky, and handling operations complicated, transportation is most important. The trackless freedom, smooth, fast travel, high capacity and precise control of Baker Trucks is effecting lowered manufacturing costs and increased production in many installations . . . . Let us show you how they apply to your problems.

Baker INDUSTRIAL TRUCKS

The Piper Cub Coupe Model J-4 is shown above in cut-away. Here is shown the welded steel tube fuselage construction and the two place side by side dual control arrangement.

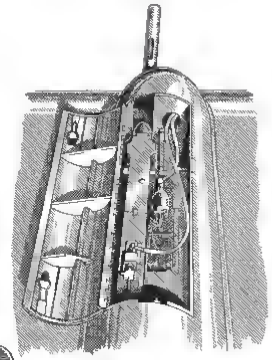
The Naugle Model Mercury employs a novel wing spar and rib construction shown above and below. The wing spar is made up of two main spar sections joined by X members around which the ribs are built attaching fore and aft as shown.

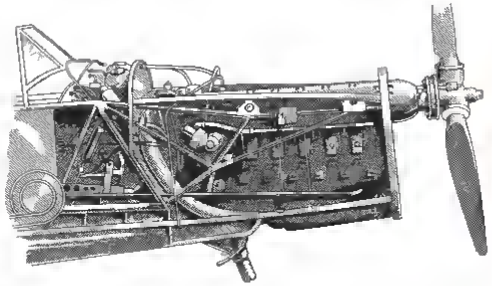
A Continental engine is shown above installed in a Piper Coupe, whose cut-away drawing is at the top of the page. Notice the exhaust system.

Another view of the Naugle wing spar construction

A cut-away drawing is shown below of the Taylorcraft BL-T. The key at the lower right explains several of the details of the ship

A - Landing gear with replaceable bronze bushings
B - Four longeron fuselage
C - Rubber mounted gas tank
D - Flexible steel control cables
E - All metal rib construction
F - Reinforced spruce spars
G - Nicralumin leading edge
H - Strut fittings
I - Balanced type aileron
J - Tail spring

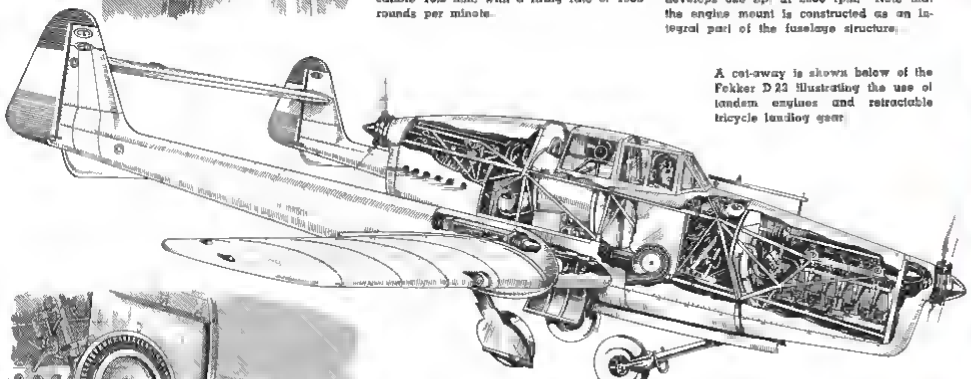


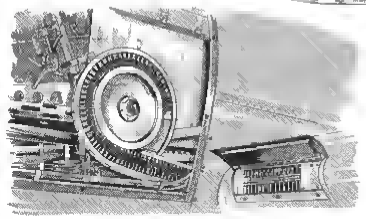


The wing boom gun (left) in the Fokker D.23 (below) uses Browning FN, shell guns, calibre 13.2 mm, with a firing rate of 1000 rounds per minute.

The front and rear engines in the D.23 are Walter Sagitta ISR engines, each of which develops 528 hp. at 2600 rpm. Note that the engine mount is constructed as an integral part of the fuselage structure.

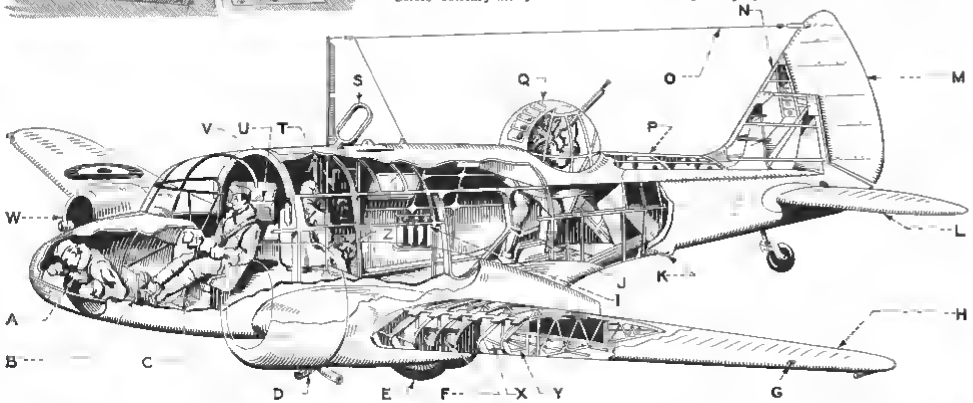
A cut-away is shown below of the Fokker D.23 illustrating the use of tandem engines and retractable tricycle landing gear.





The fuselage guns (left) are two synchronized Browning FN guns calibre 7.9 mm. with a rate of fire of 1300 rounds per minute. The cartridges are stored in the wings and follow this circular track before entering the gun.

A cut-away is shown below of the British Airspeed Oxford. This ship is an "All Purpose" Trainer and may be fitted for practice bombing, radio, navigation and gunnery instruction; or advanced twin-engine flying training.



A- Bomb-aimer using sight through transparent panel
B- Pilot's feet guard
C- Pilot's flying controls, dual controls may be installed at starboard side for instructor
D- Air intake
E- Undercarriage retracted backwards into the nacelle
F- Landing lights
G- Navigation light
H- Plywood covered stressed-skin main wing
I- Oxygen stowage
J- Cabin door opening
K- Flare chutes
L- Plywood-covered fin and fabric-covered, wooden-frame elevator
M- Fabric-covered wooden-frame rudder
N- Fabric-covered, wooden-framed fin
O- Fixed aerial
P- Stressed skin plywood covered fuselage, some stringers have been omitted for clearness
Q- Removable revolving gun turret
S- Retractable D.F. coil aerial, loop half raised

Wings for The Two-Ocean Navy

The Martin PBM-1

FOR "the greatest fleet ever built," America is today tapping the rich, almost limitless, resources of manpower, inventive genius, and materials of the New World.

Playing its important part in this program is the Martin PBM-1, a 20-ton long-range flying boat designed for Mid-Ocean patrol. Carrying a normal crew of seven, the gull-wing Martin, with Curtiss Electric Propellers, is a potential power-house both on the offense and defense.

Howard DGA 125 Trainer

HOWARD AIRPLANES AID DEFENSE PROGRAM

This Trainer is now in production and is being used by operators of secondary and refresher courses of the Civilian Pilot Training Program. The DGA-125 is stressed for military acrobatics and will play an important part in training pilots for the Air Corps. Information available on request.

Recent orders and deliveries to The Texas Company, Shell Oil Corporation, United Fruit Company, Humble Oil and Refining Company, Canadian Colonial Airways, Inc., and others indicate the value of this airplane for transportation in business directly concerned with defense. Send for our free catalog, "The Aircrafter".

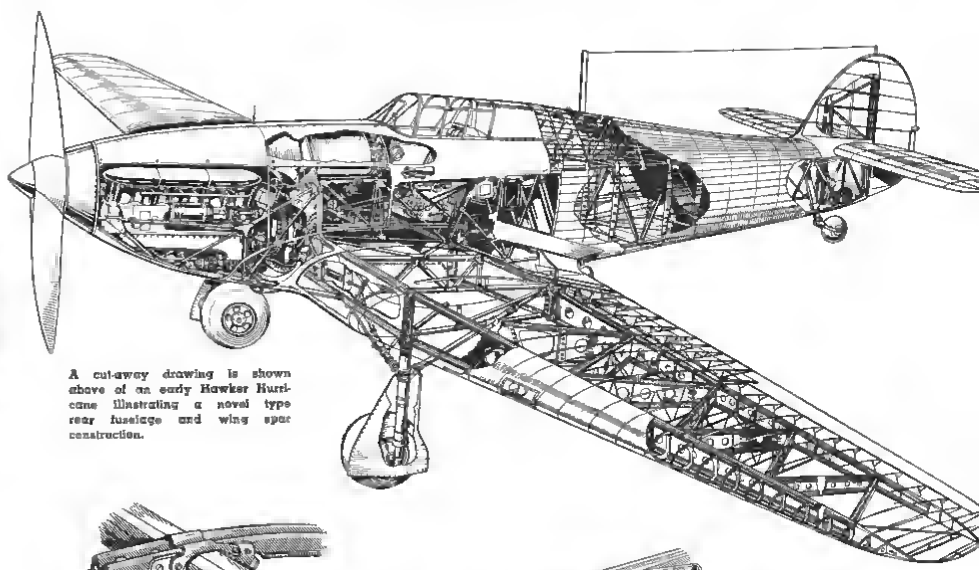
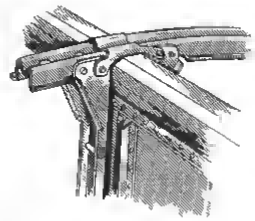
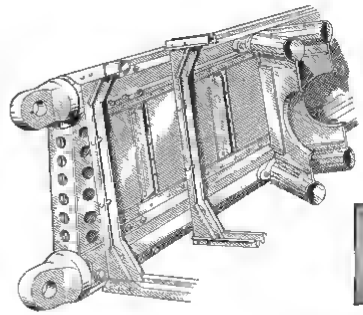
Howard 5 Place Transport

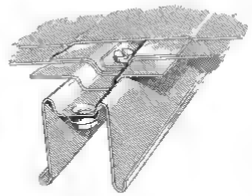


A cut-away drawing is shown above of an early Hawker Hurricane illustrating a novel type rear fuselage and wing spar construction.



The wing ribs of the Hurricane are attached to the wing spars by the fitting shown above.

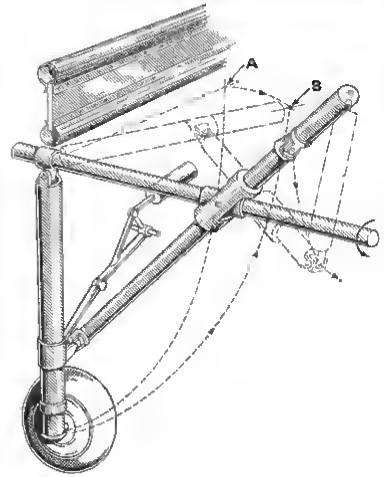




The skin is attached to the wing ribs by a very unique process illustrated above, with the wing spar being the bottom inverted U section. Immediately on top of this is placed a wide flanged hat section and in the center is placed a small lock strip, through all of these goes a bolt which fits into a nut, which is a permanent part of the bottom U section. Over all of this is then placed a final covering to give a smooth surface.

The main wing spar of the Hawker Hurricane is made of two tubular sections on top and bottom joined by a stiffener reinforced shear web. The typical truss spar joint is illustrated here as well as the fittings for joining the outer wing panel to the center section.

The landing gear of the Hawker Hurricane is retracted as shown in the diagram at the right. By turning the horizontal torque tube, as shown, the wheel is swung first to position "A" then by further turning it is swung back to position "B".



AVIATION PACKINGS

BACKED BY LONG EXPERIENCE—

More than 70 years' continuous experience in packing manufacture goes into every Johns-Manville Packing and Gasket.

MADE OF QUALITY MATERIALS—

Careful selection of raw materials, plus exacting specifications and rigid laboratory control safeguard the quality and uniformity that are characteristic of every J-M Packing.

ENGINEERED TO THE JOB—

The complete facilities of the J-M Packing Laboratories and the assistance of trained J-M Engineers are always available to help solve unusual packing problems.

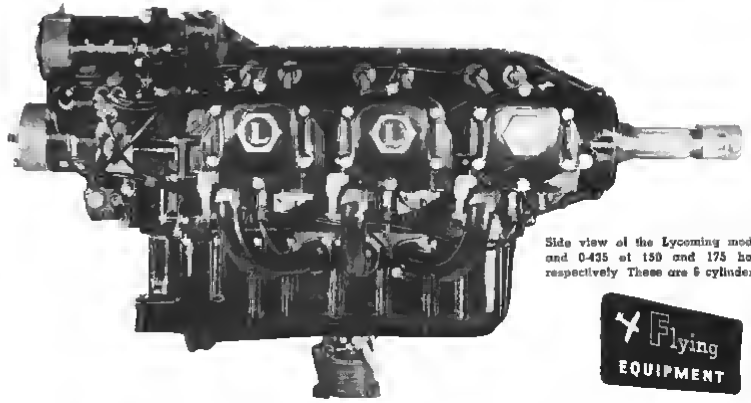
DEPENDABLE SOURCE OF SUPPLY—

Johns-Manville's unmatched manufacturing facilities provide the dependable source of supply so vital to the maintenance of uninterrupted production schedules.

For details, write Johns-Manville, 22 East 40th Street, New York, N.Y.

JM Johns-Manville PACKINGS & GASKETS

FOR THE AVIATION INDUSTRY



Side view of the Lycoming models O-350 and O-435 at 150 and 175 horsepower respectively. These are 6 cylinder engines.

Flying EQUIPMENT

4 New Lycoming Engines

From the Lycoming Division of the Aviation Manufacturing Corp., comes the announcement of four new horizontally opposed, air-cooled engines ranging from 100 to 175 horsepower.

Two of the recently announced engines, designated Lycoming O-235 and Lycoming O-290, have four cylinders and are rated 100 and 125 horsepower, respectively. Basically the same, these engines differ only in displacement. The other two new Lycoming engines O-350 and O-435, are six-cylinder, direct drive power plants of 150 and 175 horsepower with the same basic specifications excepting displacement.

Cylinder assemblies of the new engines consist of aluminum cylinder heads, screwed and shrunk to steel cylinders. Cooling fins are integral with the cylinder head casting and the cylinder barrel. The cylinder assemblies are fastened to the crankcase by means of studs and nuts. Each cylinder is equipped with two spark plugs located on opposite sides of the cylinder and installed in aluminum bronze spark plug bushings which are screwed and shrunk into the cylinder head.

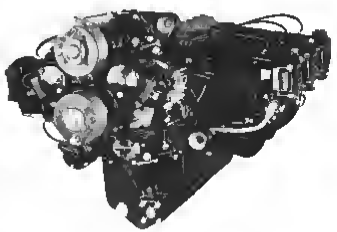
The crankcases of these new Lycoming engines consist of two aluminum alloy castings, split on the vertical centerline through the crankshaft bearings. Four copper-lead, steel-back, precision type main bearings are used on the four-cylinder models while the six-cylinder models have an additional ball thrust bearing at the forward end of the case. The two halves of the crankcases are secured by means of studs and nuts and are heavily ribbed throughout for maximum strength.

Pistons are of aluminum alloy, heavily ribbed under the head for maximum strength and heat dissipation. Each piston is equipped with two compression and two oil-control rings. Full-floating piston pins are 1¼ inch in diameter and have aluminum alloy retaining plugs.

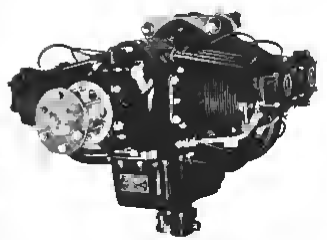
The fuel induction system consists of a single-barrel carburetor of suitable size fastened to the bottom of the oil sump. The distributing zone of the induction system is integral with the sump casting and is submerged in oil to provide sufficient heat to the fuel mixture for satisfactory distribution and cold weather operation. All models are equipped with dual magnetos which are spur gear driven from the timing gears.

Lubrication is of the full-pressure type including valve mechanism. Crankshaft is equipped with centrifugal sludge removers on all crankpins and pistons, piston pins and accessory drive gears are lubricated by splash. Oil capacity is 8 quarts for the four-cylinder and 12 quarts for six cylinder models.

Drives for dual magnetos, starter and single tachometer are standard on all the new Lycoming models. In addition, drives for fuel pump, vacuum pump, generator and dual tachometers can be supplied as optional equipment. (For complete specifications see tables page 113.)



Three-quarter rear view of the Lycoming engine models O-350 and O-435.



Models O-235 and O-290, 4 cylinders opposed, at 100 and 125 horsepower respectively.

BLAINE STUBBLEFIELD, Washington — C. F. McReynolds, Pacific Coast — Jay P. AuWerter, New York — E. R. Lockin, New York — FEBRUARY 1941

Auto Firms To Contract With Plane Builders
4 Plants Will Assemble 100 Bombers per Month

Three hundred bombers a month about a year or more from now is what Knudsen's plan for utilization of unused automotive facilities seems to boil down to. When the plan goes into operation it will provide 100 a month each of Martin B-26 and North American B-25 two-engine bombers and Consolidated B-24 four-engine bombers. Output rates will doubtless be stepped up beyond these figures as the program gets farther along.

As the plan stands, the government will build and own at least four assembly plants. Martin will operate a plant at Omaha, and will take a contract from the Air Corps for some 4,000 B-26s. It will sub-contract manufacture of most of the parts to Chrysler Corp., which will use its existing machinery for the work and use vacant plant space to do sub-assemblies.

Similarly, North American will operate a Kansas City government plant and get its parts under sub-contract from General Motors; there is, of course, a close corporate connection between these firms.

The Consolidated bombers will be assembled in two plants at Tulsa and Fort Worth. That Douglas will operate these plants, under a licensing arrangement is not yet clear. Ford will make the parts for these ships.

Facilities of other automotive manufacturers will be brought into the program via sub-sub-contracting by the three auto firms. Chrysler, in particular plans to farm out a great deal of its work for Martin.

Farthest along of the new government-owned plants is the one at Kansas City which North American will operate. This will be a windowless, air-conditioned, fluorescent lighted, plant with more than a million square feet of floor and employing 10 to 15,000 men. After the war it will be used as an Air Corps maintenance depot.

Meanwhile, management brains, though not physical facilities, of the automotive firms are being drawn into manufacture of air cooled engines. Ford, Studebaker, and Buick are all in on this. Unlike the plane parts program, this work involves construction of entire new plants. Little attempt is being made to apply automotive technics; plants generally duplicate existing Pratt & Whitney and Curtiss layouts.

Three engine plant programs are in the Detroit area. Ford is farthest along with his $22,000,000 engine factory and magnesium foundry at Dearborn. He hopes to be producing Pratt & Whitneys by March, but there is considerable scepticism as to whether he can do

(*Turn to page 152*)

Harris & Ewing

PRESIDENT FRANKLIN D. ROOSEVELT has been authorized by the people of the country to build the biggest military force in the world. Largely upon the United States rests the responsibility for a combined British American air power that must overpower the Axis air arm if the Democracies are to win the war. Here you see the President on his recent visit to the Buffalo plant of Curtiss-Wright. He is talking to the 9000 employees over the speaker system.

MEET AIR MARSHAL Sir Hugh Dowding, chief of the RAF during the blitzkrieg of last September, now head of Britain's home defense air war. This picture was taken as the gentle-mannered Scot told Washington newsmen that Britain would stop Nazi night bombing by Spring; that RAF will hold control over the islands, which will prevent a German invasion. Sir Hugh is calling on American aircraft manufacturers, helping to coordinate production of the two countries.

Roosevelt Snggests CPT Changes; Cnts Bndget Expeet Militarizatinn; "Deferred Enlistment"

President Roosevelt at a recent press conference said that CPT students are not disposed to enter Service and that the training is not particularly adapted to military flying At the same time, publication of the President's Budget estimate of appropriations showed the CPT cut from $37,000,000 in 1941 to $18,000,000 for fiscal 1942

This combination of remarks and budget cut looks as if Army and Navy officers, unfavorable to CPT as a military adjunct, had sold the President their ideas It is known that some high Service officers opposed the CPT, but those in command until recently supported it Recent changes in the Air Corps command are noticed as possibly back of the President's new stand

Of course the Civil Air Administrator will plead before committee for reinstatement of the 1942 fund at something like that of last year Argument will be that here is a set-up of 700 air schools in 700 colleges, this plant by June will have given 90,000 courses to 70,000 persons, has turned out 50,000 student pilots 19 to 26 years old with two years of college; that the cutting of expensive attrition and giving so many a feel of the air, is well worth the low cost per individual. CPT was organized in accordance with Army-Navy views Obviously they have now changed their minds, or an opposing group has supplanted the approving group Either way, say friends of CPT, it looks like see-sawing at a bad time.

On the President's side, it can be said that CPT was set up as a military project in civilian disguise, because the public at that time would not have accepted training for fighting Now, the false whiskers are off Possibly it's a change of politics and not of training methods

Changes in CPT are suggested by National Aeronautic Association and others: higher powered ships for secondary; regular military discipline, legal obligation of graduates to join Service if called; physical standards at par with Service standards

In face of a real emergency, with a need for the fastest military training, regardless of cost and public opinion, authorities say that direct military action would be fully justified

Incidentally, the Air Corps and Navy would have no trouble getting plenty of grade-A pilot material under present physical standards, if the Government was willing to encourage men to leave school and jobs

Student accident insurance is down again, instead of $500 in hospitalization, the $9 premium buys $1,000 worth

Twenty South American college students in the US will be given the regular CPT primary course

The Boomerang Plane

Igor Sikorsky, engineering manager of the Vought-Sikorsky division of United Aircraft, has made several hundred test flights since last March in his VS-300 helicopter It has demonstrated its ability to rise vertically and obliquely, to fly forward, beckward, or sideways, and to hover over one spot in air ranging from dead calm to 25 mph

RAF Chief Talks

Chief Marshal Sir Hugh Dowding, head of the RAF in the blitzkrieg days of September, is contacting U S aircraft manufacturers

The blue-eyed, gentle-voiced Scot says the British have a defense against night bombing, which he thinks will be in full effect this Spring

Sir Hugh praised the Lockheed Hudson, which is being received and equipped with a turret which fires aft Martin medium bombers are going to the middle East The Curtiss P-40s are doing fine, with some modifications Douglas DB-7 is playing two roles in the fighting, he didn't name them

Bombers are flying the Atlantic all the time, Lockheed, Consolidated, and others He says any bomber can do it if part of the dead load is left behind

Sometimes a Nazi squadron follows one leader, but the Germans install excellent instruments in all their planes. Absolutely no inferior gasoline has been found in downed Nazi ships, but some strange stuff has turned up in German motor transport

Airplanes cannot yet be built on automobile production lines, too much advantage lies in design, radical design changes are necessarily frequent Standardization may come in some future war.

AC Flys Infantry

The fighting cocks of Europe, making a fine art of war, have worked ont some tricks we've done little or nothing about One of them is air transport of parachute troops and infantry. The Army is rehearsing them both now: parachuters at Fort Benning, Ga., and flying infantry at Fort Sam Houston, Tex

The idea in airplane soldiery is to land man and combat equipment on fields already captured by parachuters, or lightly held by the enemy Troops must have subsistence and ammunition for 24 to 36 hours, according to *Army and Navy Journal*, until land support arrives

McCarran Proposes Independence for CAA Safety Board to NACA; Aholish Administratnr

Washington (AVIATION BUREAU)—Again, as anticipated, Senator McCarran has moved to restore the Civil Aeronautics Authority to an independent status outside the Department of Commerce He proposed the reorganization in Senate Bill No 1 of the 77th Congress

This legislation would aholish the Administrator and transfer his functions to the chairman of the re-instated five-man Civil Aeronautics Authority The chairman of the Board would appoint an Executive Director, within the Board, to whom could be delegated any or all of the administrative functions to be transferred to the Board.

Functions of the recently-abolished Air Safety Board would be given to the National Advisory Committee for Aeronautics, on the ground that it is a body of highly-respected aeronautical authorities The Safety Board within NACA would be completely independent of the CAA

McCarran will tell Congress that 473 persons were killed under Commerce air regulation between 1927 and June 1938, that for 17 months under the Safety Board there were no fatalities, that since Commerce again acceded to authority in June 1940, there have been four major accidents, killing 43 persons. He will try to show that the accidents are the result of politics.

NACA did not agree to accept the Safety Board; probably will testify against the wisdom of such a move, in fear of political troubles, which it avoids like the measles

Various Capital observers expressed opinion that Congress, anxious to preserve unity in the emergency, will hesitate to rebuff the President with Sen McCarran's proposal, but that any more accidents might tip the scale in his favor.

Wide World

THESE WOMEN will taur tha natian to mobilize a fleat af privately-owned planes for humanitarian use in countries at war and in disaster strikan sections of U. S. L ta R.: Marcedes Ormston, secretary of Reilaf Wings; Ruth Nichols, exacutiva diractar af Reilaf Wings; Lea Ya'Ching af China; Jana Hyde. All are pilats.

BENDIX AVIATION, LTD. PRESENTS:

BENDIX
CUSHION CLAMPS

Offering definite advantages to the user, Bendix CUSHION CLAMPS are now in production They are being marketed only after months of research, development and testing

Permanent conductivity is obtained through the use of an aluminum bonding strip hollow-riveted to the clamp Vibration is absorbed by a Neoprene cushion The clamps will not mar or deform thin wall tubing They are light in weight and are easily and quickly assembled due to their construction and absolute uniformity in manufacture

Bendix CUSHION CLAMPS are manufactured to Army-Navy 755 tube clip specifications, and are available in all sizes To simplify purchasing and stock control Army-Navy size designations are used throughout and all Bendix CUSHION CLAMPS are plainly marked for rapid identification

Write or wire for specification sheet number 401005 and samples

WILLIAM E. SCHAEFER, in aviation since 1915, has been made general superintendent in charge of manufacturing operations for Republic Aviation Corp., under factory manager George A. Meyrer.

NEW VICE PRESIDENT in charge of sales for Aeronca Aircraft is Lee H. Smith, formerly assistant sales manager for Waco Aircraft, and sales manager for Vultee Aircraft.

CONGRESS HAS CONFIRMED the President's reappointment of Edward Warner, AVIATION'S former editor, as a member of the Civil Aeronautics Board. He will serve as vice chairman.

FOLLOWING the tragic death of W. J. Austin, George A. Bryant, executive vice president and general manager of The Austin Co. since 1930, has been elected to succeed him as president and general mgr.

Inst. Aero Sciences

THE ANNUAL SPERRY AWARD (to a young man for contribution to the advancement of aeronautics), was won by Dr. W. Bailey Oswald, of Douglas Aircraft, for studies in aerodynamics.

1941 OFFICERS of the I. Ae. S. are: Pres.: Frank W. Caldwell, above; V.P.s: H. L. Hibbard, W. A. M. Burden, C. H. Colvin, P. G. Johnson, L. D. Gardner, Treas.: G. Loening; Sec'y: C. E. Sinclair.

SUSY SWITLICK PARACHUTE & EQUIPMENT CO., has appointed Kenneth W. Wolcott sales and advertising manager. The Switlick factories have a $3,000,000 backlog.

APPOINTED ASSISTANT to the general manager of Wright Aeronautical, Rudolph F. Gegg will work on special projects. With Wright since 1930, he supervised construction of the Lockland plant.

FORMERLY MANAGER of the Technical Department of the Aeronautical Chamber of Commerce, Robert W. Ayer joins the executive staff of Fleetwings, Inc., as assistant to the president.

AFTER SEVERAL MONTHS' illness, Lawrence O. Quinther, manager of Goodyear's Airplane Tire Sales Division, died on Dec. 29. In the Air Service during the war, he was also an Air Race official.

A SEPARATE ORGANIZATION, the Aircraft Engine Division, has been created by Buick Motor Division of General Motors for the production of aircraft engines. Personnel of the new department have all been selected from within the Buick Co., affecting 40 key technicians, engineers and managers. Heading the project is D. E. Williams (l.), Buick comptroller, as operating manager, and J. G. Hammond (c.), Buick's general superintendent, as general manufacturing manager. Assisting Mr. Hammond will be R. H. Archer (r.), general superintendent, I. H. Larkin, assistant manufacturing manager, and James O'Neil, assistant general superintendent.

TRANSFERRED from the Buffalo division of Curtiss-Wright Corp. to its new 1,200,000 sq. ft. factory at Columbus, Ohio, are Stanley I. Vaughn and G. B. Clerk. Vaughn (l.), formerly manager of the experimental shop, takes over as factory manager. He has been with Curtiss continuously since 1915. Clerk becomes sales representative. An ex-Navy flyer, he joined the company in 1930, and in 1939 began tests on Curtiss Hawks for French delivery.

Empire Air Training

Orders now being filled by Australia's two largest plane manufacturers include 650 "Tigermoths" and over 800 "Wirraways" for primary and advanced training. In addition, a locally designed advanced trainer and a medium bomber are in the prototype stage, while it is expected that the Bristol "Beaufort" will be produced on a one-a-day basis before the end of the year.

While the Empire Air Training Program calls for 3,000 planes, 12,000 pilots and 26,000 ground-crew members during the first 3 years, Australia has already accepted 12,000 men for flight-crews, of which some 4,000 are in training, not only in Australia, but also in Canada and Southern Rhodesia. Of the ground-crews, some 13,000 are now in training, while an additional 5,500 are expected to enter schools before next spring.

Disagree on Airports

Big Expansion Doubtful

On the question whether this country's civil and military aviation needs a super-duper airport expansion program, experts disagree.

The Army has expressed interest in a program of about 600 new and improved civil fields. But it seems well enough pleased with the present schedule of 250. For a program of 200 fields, 12 of them in Alaska and Hawaii, the last Congress appropriated $40,000,000. The President's budget estimate for fiscal 1942, adds $33,000,000 more. About $80,000,000 are needed to do the complete job. WPA is supposed to make the difference. Of course, the actual appropriation may be vastly different from the estimate. The other 50 ports have not yet been provided for.

Civil Pilot Training has been put off of most fields where military and/or civil transport are operating. At least 25% of the nation's fields are closed to private flying.

The Air Corps has moved onto about 38 civil air fields.

Probably Army will not occupy any more civil fields as it stands organized now under the "54 group" setup. (A group is three squadrons. Two to four groups make a wing. There are 17 wings in the US and five outside continental limits, making 22 in all.) The Air Corps occupies in the US about 105 air fields of its own, and ten in Alaska, Hawaii, Panama, etc.

Washington authorities don't believe any extraordinary port expansion plans will be brought before Congress.

Calling Names

Pan American Airways has new executive offices at 1 "1 18th Street, Washington D. C.

Richard E Elwell, former attorney for Anthony Fokker and his company, is appointed chief attorney for compliance service of Civil Air Administrator.

American Airlines carried its 8,000,000th passenger. First in the world to do it.

Swedish Legation in Washington protests statements in AVIATION and other publications that their country is submissive to Germany. Sweden is arming to make a Nazi attack too expensive, wants more planes.

Pat O'Malley, CAA information assistant on vacation in Central America, getting dope for an air business book.

Railway Express offers 27 airplane trips totaling 27,000 miles in a sales contest among its 57,000 employees. Grand prize is round trip anywhere to anywhere in the U. S. for two, and all expenses for a week.

Eva DeMariano serves as special dietician for TWA's 17,000 service units between New York and California. Was with General Foods for ten years.

Alexander P. de Seversky was presented with the Harmon Trophy by President Roosevelt at the White House.

President W. A. Patterson of United Air Lines and **President J. C. Ward** of Fairchild Engine & Airplane Corp. were speakers at the January meeting of the Aero Club of N. Y.

G. R. Crone is appointed special representative, publicity Department, to handle cooperative advertising for TWA with headquarters in the Airlines Terminal Bldg., N. Y.

Dr. Hugh L. Dryden of National Bureau of Standards receives the Sylvanus Albert Reed Award from Institute of the Aero Sciences for contributions to the mechanics of boundary layer flow and to the interpretation of wind tunnel experiments.

Dr. Edward E. Miner, Jr., research and development engineer of Glenn Martin Co., is made chairman of the new Air Transportation Committee of the American Institute of Electrical Engineers.

John J. McCloy, World War Army captain, **Robert A. Lovett,** U.S.N.R. Lieutenant Commander in World War, and **J. H. Ambrey,** attorney, are named special assistants to Secretary of War Stimson.

Guy Vaughan, Wright Aeronautical's president, presented 20-year service pins to 84 employees.

Elmer P. Bruhn receives appointment to Purdue University as associate professor of aeronautical engineering. Was with Vought-Sikorsky since 1935.

Selig Altschul, AVIATION's regular financial contributor, becomes associated with Wiaibrop, Mitchell & Co. as independent consultant on transportation securities.

C. Harold Wills, in charge of Ford's Liberty engine production during World War, passed away on Dec. 30 at the age of 82.

Frank Mills, owner of Essington Aviation School and flight instructor during World War, died on Dec. 30 at the age of 45.

Capt. Garland Fulton retires from the Navy, was in charge of Airship Division, Bureau of Aeronautics since 1929.

Henry W. Roberts becomes Director of Public Relations for Lear Avia. at their New York City offices.

THE WASHINGTON WINDSOCK

By BLAINE STUBBLEFIELD

Jammed With Generals

A mee told us, in the Willard Bar, that efficiency of skilled labor goes down as the certainty of not losing jobs goes up. We pass it along as the only point not yet debated as to the cause of slow airplane production.

The reason why Pan American Airways released three 314 Boeing boats to Britain is that this model will be obsolescent by the time it's delivered. PAA loses three months on the deal, but gains by substituting new designs.

If you didn't know it, Pan American's China National lines were grounded because of war, and now they're up again. The reason is, less combat in that region. Call it Japanese weakness if you like to.

It the U. S. joins war doose, airlines to South America will be jammed with brig. generals, diplomats with pointed mustaches, and guys with brief cases. Airlines would rather build routine trade to keep in peacetime. Some think War Department should lend transport planes to help U. S. foreign and domestic lines to haul war priorities.

One day recently the British bombed in daylight more than a dozen points in Europe from Norway to the East Mediteranean. Nazis have advantage of concentrated target, but they have enormous expanses to defend.

Glider and sailplane training will be increasingly advocated as a pilot backlog builder, if priorities (to save aluminum and engine man-hours), are placed against flivver planes.

Mrs. Roosevelt hopes when the war ends we shall "have the sense" to say there shall be no more armaments. This is the first word of what many think FDR intends to try another League, this time with world police and no national armament.

Among the best adventure stories after the war will be the memoirs of pilots who are flying bombers over.

Hedy Arnold

NEW HAMMERHEAD PROPELLER, invented by Wm. H. Fletner, left, and Jim Serene. Claim is that unusual tip design gives greater travel to the tip and also permits extreme end of prop. to get a full bite. Plane is said to travel inside a "tube" of still air. Here Fletner holds a conventional propeller along side of new model. Inventors claim a 30 per cent increase in speed at same r.p.m.

Air Corps Expansion Program Completed 54 Combat Groups Nave All Types nf Plancs

Washington (AVIATION BUREAU)—Expansion program for the Army Air Corps, as planned early in 1940 is moving ahead On June 30, AC consisted of 3,322 Regular Army and Reserve officers, 1,864 flying cadets, and 45,814 enlisted men At that time an Air Force of 54 combat groups containing all types of airplanes was the goal, There were then 18 skeleton groups and wings In December, 1940, four Air District Headquarters were activated, together with 14 additional Wing Headquarters, which will handle the assignment of all personnel and planes in the 54-group setup Groups not already activated, were installed on January 15, 1941, formed from existing Regular Army units The Air Corps has expended since last June to 6,180 officers, 7,000 flying cadets, and 83,000 enlisted men

The complete personnel allotment under the 54-group setup is about 16,000 officers and 156,000 men It is expected that by June 30, 1941, 10,100 officers, 15,000 flying cadets, and 151,000 enlisted men will be in the Air Corps

Decentralization of training and inspection duties of the Commanding General and GHQ Air Force is provided for, and the development of commanders and staffs for special task forces in time of war is assured

Air District Headquarters Mitchel Field New York Tampa, Florida, March Field California and Spokane Washington Wing headquarters including those previously in existence will be at the following places Westover Field Massachusetts Michel Field, N Y Selfridge Field Michigan Langley Field Virginia and Bowmas Field Kentucky all in the Northeast Air District Augusta Georgia Savannah Georgia West Palm Beach Florida Tampa, Florida New Orleans, Louisiana, all in the Southeast Air District. Tucson Arizona Marsh Field Fresno and Hamilton Field California all in the Southwest Air District Spokane Washington Portland Oregon Salt Lake City Utah, all in the Northwest Air District. Air District Headquarters squadrons are given one officer and 63 men each and wing headquarters squadrons one officer and 25 men each to prepare for the arrival of complete headquarters.

The training of these new units will be under the direct charge of the Commanding General, GHQ Air Force, which comprises all four air districts.

Navy Needs More Planes and Pilnts

As the high command divided the United States Navy into three fleets Atlantic, Pacific, and Far East, Admiral John Towers, chief of the Navy air arm, told Congress the Navy expects to get 4,000 additional planes this year despite production delays He said that on January 1 the Navy had 2,590 planes on hand The additional 4,000 would run the total up to 6,590, but about 300 would have to be deducted for washouts and decommissionings Admiral Tower said he believed delays in producing aircraft are due to shortage of machine tools and the failure of subcontractors to fulfill their obligations

Meanwhile Rep. Melvin J Maas of the House Naval Affairs Committee says the Navy is short of training planes and candidates for flight training. He sees no hope for improved plane production unless priorities are given to planes over other armament Shortage of pilot material is due to too high requirements, he believes Mr Maas sees no reason why service pilots must have two years of college training He thinks more enlisted men should be trained as pilats, and will so recommend to Congress

AC Wants Engineers

The Air Corps announced training of specialists for commissions in squadron engineering, armament, photographic and communications activities. Status, pay, allowances, will be the eame as for cadets in pilot training Applicants must be un-married, citizens, age 20 to 26 inclusive, excellent condition

First choice for acceptance in engineering will be college graduates with engineering degrees, seniors in engineering will be second Training, which will take about nine months, will include theoretical and practical engineering in civil and Air Corps schools Subjects include aerodynamics, airplane design, engines and installation; engine lab, stress analysis; instruments; propeller design; structure and aerodynamics of military planes Engineering students will receive 12 weeks in either New York University or Purdue University Fifty applicants enter each school avery three months from January 1.

Armament and photographic schools will he at Lowry Field, Denver, and the communications school will be at Scott Field Illinois Requirements for these are a college degree together with some experience in the subject Applications for communications, armament, and photographic are not being accepted as yet

Pacific Air Fortress

So long as a strong Naval power exists in the Orient, Hawaii is one of the most strategic points in the Western Hemisphere The United States is taking advantage of this fact by rushing work on 17 Army and Navy air bases in the area These will constitute an almost impenetrable barrier to any hostile approach by sea or air The beses are distributed among the Hawaiian Islands proper and adjacent groups.

"Live Bait"

Associated Press the other day reported that the U S Navy is using manned targets for bomb practice. The targets are average-sized motor boats with deck armor and a turret for a crew of two A black stripe on the deck is the bull's eye for divers. Non-penetrating bombs are used, but the occupants said it was plenty exciting The idea is that men aboard maneuver the boats in the manner of enemy craft attempting to evade the bombs Target man and pilots exchange places for experience. The boats were seen on the way down the Mississippi.

Army Endnrance Run

Few countries have the problem of such long-range defense flying as has the United States Our Air Corps is by far the world's best in the art of military distance flying A new test of equipment and men was made early last month when a Boeing B17c made a 18-hour flight at a minimum of 15,000 feet. The crew of six carried oxygen masks. Physical reaction to the long grind was specially watched Distance covered was much in excess of 3,000 miles

Anti-bomb Plans

It is surprising how few predictions you find as to the extent "civilization" will dig in to escape air bombing Engineers say it costs so much to hury factories, hangars, and the like, that it may not be done extensively Anyway, the defense agencies of this country are working out long-range plans based on British experience These plans will be made available to local and state authorities. They include protection against fire, police and air warden duties, warning networks, shelter consttuction, wreckage removal, airfield and plant camouflage

100 Octane Gasoline

Aviation gasoline is among the least of defense troubles, but the industry thinks it might be well to expand a little in case consumption hy training planes and growing civil activities have been underestimated The blockade abroad has reduced export of 100 octane gas by about 44% If it were necessary to double present US production, it could be done in 12 months

THIS IS A COORDINATOR. It repraduces the cockpit of an Air Corps Training plane, burns na gasaline Thauaands of AC cadets will begin aerial careers an it. Invanted by H G Nicholeen of Cal-Aara Academy.

ROMEC Expands

FOR MORE AND BETTER AIRCRAFT FUEL PUMPS

The Romac Pump Company—pioneer manufacturars of aircraft fuel pumps—announce an addition larger than the original plant and the adoption of production and assembly methods that will triple capacity.

For years Romac Pumps hava baen used by the majority of the world's aircraft builders and operators. Whether in record breaking high altituda flights, steady daily transport servica or on tha famous round the world flights—Romac Pumps are thara with that definita unquestioned dependability of operation. The new non-pulsating type reduces both wear and powar raquirement below any previous standard.

To aid in the Defense Program we are giving engineering consultation service on fueling problems on short notice, without charge. Your adoption of Romec Pumps now may save you difficultias and regrets.

ROMEC PUMP CO., 345 Bridge St. ELYRIA, OHIO U.S.A.

Engine driven, hand operated and electrically driven fuel pumps ★ emergency, hydraulic, vacuum and transfer pumps ★ Glycol, de-icing and bilge pumps ★ air compressors.

A New MARTIN BOMBER - packed with Power!

AN ARSENAL FOR BOMBARDMENT

and self-defense in air combat . . . the new Martin B-26 "Flying Torpedo" for the U. S. Army, is now in mass-production. A streamlined, semi-high-wing, medium bamber . . . with retracting tricycle landing gear . . . two 18-cylinder, 1850-horsepower engines . . . gross weight of 26,625 pounds . . . the B-26 is the single mass-production type which Martin is manufacturing for the Army. Oefense is on the wing!

Martin B-26 BOMBER

Builders of Dependable Aircraft Since 1909

TRADE MARK

Cost was no factor — Yet a low cost Molybdenum Steel proved the best. Such steels are worth investigating

High stresses and severe weight limitations make material specifications for airplane structural parts and fittings exceedingly strict — which explains why Chromium-Molybdenum (SAE X4130) steel is so extensively used.

This steel has an excellent strength weight ratio and good fatigue strength. It is weldable by any process and welded parts can be used without subsequent heat treatment if necessary.

Write for our free publications, "Chromium-Molybdenum Steel for Aircraft" and "Molybdenum in Steel" for complete technical information.

United States Becomes Sole Plane Buyer
May Curtail Profit, But Simplify Production

Washington (AVIATION BUREAU) —Political effects of the arms-loan program are of course immense, but what it will mean to the man who builds the planes will take time to reveal. It will probably mean less profit, many manufacturers have felt that however US orders might be hedged with restriction there would always be a profit in the British work. Now the US is the sole customer.

On the other hand, production problems should be simplified by the standardization as between British and US requirements that is certain to result. Where a production line is already set up on models used only by the British, manufacture will doubtless continue. But where this country and Britain are ordering substantially the same ship, the loan plan should end bickering over details of fitting and equipment. Technicians of the two countries will continue to dispute over major questions of design such as armament versus performance or hydraulic versus electric turrets, but the British will be in a much weaker position.

Meanwhile, problems of manufacturers dealing with this government have been substantially reduced by the drastic reorganization of the defense set-up which followed the hesitations and fears of late 1940. Details of procurement and all technical matters remain in the hands of the Army and Navy, and on questions of production policy and methods, manufacturers are now able to deal, in the Office of Production Management, with men having authority and the power to make decisions.

With significant exceptions, personnel of the production division of OPM is about the same as that of the old production and materials divisions of the Defense Commission. Removal of Stettinius from the raw materials assignment should mean a lessening of the tendency in that group to play down possibilities of shortage and an increased emphasis on expanded sources of supply.

More sweeping is the shift in the priorities set-up. The system of "voluntary" preference ratings administered by the Army-Navy Munitions Board continued without hiatus through the reorganization period, as did the simplified system for extension of the ratings to sub-contracts with the mere countersignature of the inspecting officer in charge of the contract.

But the handling of compulsory priorities is now in the hands of the Priorities Division of OPM under Stettinius—with the advice of a Priorities Board including all the defense bigshots. Within a few hours after its organization, Priorities Division had set up its system of industry committees for every product on which there seemed an immediate prospect of shortage.

A program had been set up, just before the President reorganized defense, to make the voluntary priorities compulsory in all but name by arranging to issue a compulsory rating whenever cooperation is not obtained under a voluntary rating. Abolition of the old Priorities Board and the Priorities Administrator shelved that plan temporarily.

(*Continued from page 141*)

it. The foundry is intended to have a larger capacity than the factory—in order to help relieve the general shortage of magnesium castings.

Another Pratt & Whitney factory is to be built by Buick in Grand Blanc Township, Mich., at a cost of $24,000,000. Studebaker is building $37,000,000 worth of plants for Wright engines at South Bend, Fort Wayne, and Chicago.

All of these plants are to be financed by the companies concerned. The cost will be repaid by the federal government over five years, after which title will vest in the government.

Liquid cooled-aircraft engines are still exclusively an automotive industry product, though P & W is reported experimenting with this type. GM's Allison Division has pushed production to about 300 a month and is hoping for a 1,000 in the summer. Building construction for Packard's plant for Rolls Royce Merlin engines is nearly complete, and about a third of the machinery is installed. Some preliminary parts are being produced, but it will be the end of the year before any significant output is achieved.

Three or four liquid-cooled engines are on the Detroit drafting boards, though only Ford has officially announced he is working on the problem.

The Reuther (500-planes-a-day) plane is definitely shelved, at least for the present.

MORE ADVANCED TRAINERS for both U. S. and Britain are lined up at North American ready for flyaway delivery.

Assembly Lines

By Robert Colborn

A big factor in the plane production lag at the turn of the year — when output dropped twenty percent below the previous August—was that the industry was in something like an automotive model-change.

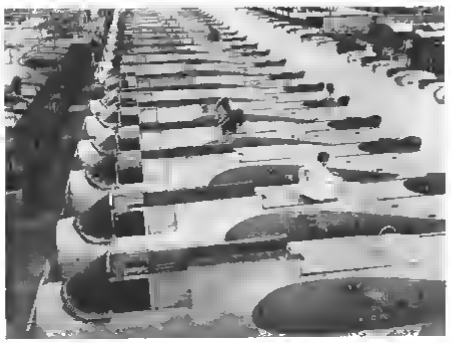
Martin has had to switch over from the French attack bomber, 167, to the Baltimore medium bomber for the British and the similar B-24 for Army. Moreover, the 100 ship a month assembly line for the French ships, idle since June is being started up on a somewhat modified design for the R A F.

Lockheed, too, which has attained an output of four Hudson bombers per day, is changing to a more advanced model of a design based on the Lodestar transport. Meanwhile, it is trying to get into production on the twin-engined pursuit, P-38E, lack of Allison engines, most of which are going into the Curtiss P-40, is a handicap.

North American is just putting the B-25 medium bomber into full production and is setting up a line for its pursuit ship.

Republic recently changed from the Swedish P-35 to a souped up version, the Lancer, and will soon switch again to the even hotter P-44, the mass production job for the Army.

Shortage of magnesium castings and aluminum castings, forgings, and tubular products is



LONG ROWS OF ATTACK BOMBERS move along on tracks at the Douglas plant as airplane production moves into high gear. Douglas engineers have devised many new production short-cuts in recent months.

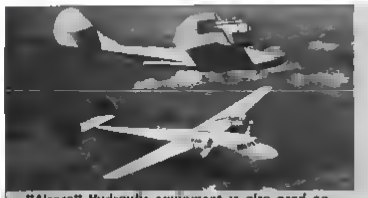
Pit work together....

ON THE HYDRAULIC SYSTEM OF CONSOLIDATED'S B-24

Thousands of hours were spent by the engineers of Aircraft Accessories Corp. in designing the specialized hydraulic units used in the Consolidated B-24 bombers. Much of this time was spent in collaboration with the engineers of Consolidated Aircraft Corporation—and both firms share the pride of this successful accomplishment.



"Airaco" Hydraulic equipment is also used on the Consolidated Amphibian Model 28, and Flying Boat Model 31.

Official U. S. Navy Photograph

The use of "Airaco" hydraulic actuating equipment in Consolidated B-24 bombers is the result of the development and research program continuously carried out by Aircraft Accessories Corp. "Airaco" engineers welcome the opportunity to aid manufacturers in the solution of their hydraulic problems, or to offer suggestions on the adaptation of hydraulic systems to their particular airplanes.

AIRACO

AIRCRAFT ACCESSORIES CORPORATION

166 W. OLIVE AVENUE • BURBANK, CALIFORNIA

WRIGHT AERONAUTICAL at Paterson, N. J., is now turning out a million horsepower a month in radial engines. This shows assembly of 1600-1700 hp. double-row Cyclones.

causing considerable embarrassment. In at least one engine plant the number of magnesium castings available is what determines engine output.

Supply of fabricated aluminum is tight, but defense officials think that by careful scheduling they can maintain plane production levels until new aluminum plants start operating this Spring. They are irritated when manufacturers cut production or complain to the newspapers in the face of material shortages without asking Washington for help. Northrop got a public reprimand for this.

Northrop is working on a single-engine patrol bomber, N-3, for the Norwegian air force (in Britain) and turning out one a week. Has 1,200-hp. Wright engine, 2,000-lb. bomb capacity and makes 235 mph.

Light plane builders are wondering whether they will be hit by the same restrictions that have been imposed on civil transports. Informal assurances come from Washington that they won't be forced out of business. But they are keeping a cautious eye on the Army and giving some thought to possible substitutes for aluminum sheet, of which they use a million pounds a year.

Consolidated facilities for manufacture of Navy patrol bombers are to be increased by $14,447,000 of plant, it will be built and owned by Defense Plant Corp., an RFC subsidiary and leased to Consolidated for ten years at a "nominal" rental.

Curtiss electric propellor capacity is to be increased by $14,000,000, probably to be government-financed on a five-year repayment "bankable contract." Curtiss has bought and will install machinery in the old Marmon plant at Indianapolis; the facilities at Caldwell, N. J., are to be expanded; and a new plant is to be built in Pittsburgh. Details have not been announced.

Ohio Crankshaft is to undertake a government-financed $4,000,000 expansion of facilities at Cleveland for manufacturing crankshafts for Wright engines.

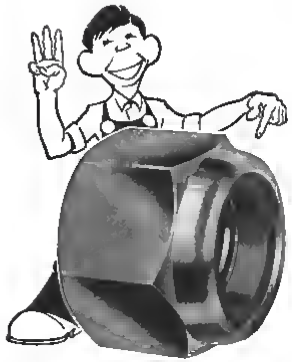
Republic has started work on a new plant, several times as large as its present buildings, to cost $5,000,000. The new Farmingdale, N. Y., plant will provide most of the capacity for Republic's pursuit plane production.

Trans-ocean Ferry Man

Importance of the trans-oceanic ferrying of military aircraft for Britain is emphasized by appointment of Gilbert L. Givvin, as representative of the Air Service Department of the Canadian Pacific Railway Company, to act as liaison officer between West Coast aircraft builders and the Air Service Department of the Canadian Pacific. Wing Commander J. R. Addams, RAF agent in Southern California, appointed Givvin.

Air Scout Sprouts

The Boy Scouts have Sea Scouts so why not Air Scouts? New York headquarters is reported considering plans for establishing ground school and flight training, in conformity with CPTP standards, for scouts between ages fifteen and eighteen who can pass the government physical examination.



THREE GOOD REASONS *for using Elastic Stop Nuts on aircraft fastenings....*

1. Sound in principle. A resilient non-metallic collar holds the threads of nut and bolt in a constant pressure-contact which can not be released by vibration, shock, or exposure to weather.

2. Proved in service. Now in their fourteenth year of successful use on aircraft, Elastic Stop Nuts have demonstrated their holding ability at every position... from instrument connections to wing fastenings... under all flying conditions.

3. A means to practical economy. Because their locking action is immediate and automatic... no washers, wires or cotter pins to handle... they save a sizable total of man-hours, in both original application and maintenance.

Catalog contains a graphic explanation of the Elastic Stop principle, presents test and application data, illustrates uses, and lists the complete line of nuts. **Write for a copy.**

Elastic Stop SELF-LOCKING NUTS

Mnderate Expansinn nf Airlines and Serviees Provided for, Says FDR in Budget Message

The airlines are considerably encouraged over the prospect of getting airplanes for maintenance and some expansion The President, in his budget message to Congress said that the air mail estimates are based on expected moderate increase of routes and services. Also, the Priorities executives of the Defense Commission, in cooperation with Army and Navy, has decided to let Douglas have engines to power the transports to be delivered—approximately half of what the airlines wanted The original plan, to save engines for military purposes, was to lend engines which would fly planes to the purchasing airlines, remeve and retnrn them to be installed in military ships The idea was that the airlines would have enough spare and alternate engines to fly the new equipment. But this didn't work out Incidantally, under the present scheme, airlines are getting not only powered planes, but a few spare ongines. Opinion in Washingten is that the lines may do better than moderate expansion within a year or so

Plane Loeation Reeorder

An airplane locatinn recorder which enables ground crews to determine the position of planes in flight has been perfected by United Air Lines Work was directed by J R Cnnningham, director of communications

The recorder is the result of four years' research Various scientific gronps have tried for years to produce a unit which could be depended upon to function nnder all conditions

It lang has been possible to obtain position "fixes" in flight but heretofore it had been impractical to find direction from the ground while using the higher frequencies of two-way radio plane-ground telephone

For the first time a dispatcher can follow the course of an airplane, and be aware of any deviation from course This can be done withaut computations by the pilots, even without their knowledge.

A large frame antenna located atap a building is rotated by an electric motor Whan a ship transmits by short wave, the signal is received by the antenna Equipment in electrical contact with this antenna automatically indicates the bearing of the plane on a chart. Thus, the dispatcher is able to keep a running record of the plane's flight

Brazil Starts Line

Brasil is getting a new airline, financed and owned and operated by Brazilians This is the first line in that country not dominated by outside interests Terminals of the line, called Navegaçao Aérea Brasileira will be Rio de Janeiro and Fortaleza in North Brazil. Major Orsini de Araujo Coriolano is technical director

PAA Planes to Britain Ask Transoecan Rates

Pan American Airways agreed te transfer to Britain three of their six new Boeing flying-boats which are nearing completion at Seattle The transfer of course had to be approved by several US federal offices England was in serious need of planes to maintain the essential lines of Empire communication It is understood that Pan American has ordered twelve 76,000-ponnd 4-engined wheel planes from a West Coast manufactnrer

It is expected the Company will be ready to commence operation of six Atlantic rnnnd trips soma tima in Jnly The full schednle will not be flown unless traffic requires PAA may start third and fourth round trips in April, fifth in May, sixth in June

Rates asked of CAB for the service are $21,600 for the first two trips, for the third, $13,800, fourth, $9,000, fifth $8,500, sixth, $8,000 The maximum ontbonnd mail load is 1,800 ponnds, plus $4 for each ponnd in excess of that

All pilots including Pan-Grace, are spending four hours a month under the hood of a Link Trainar A special trade commission from Canada recently was good-willing aronnd South America via PAA lines

United Air Lines Flys Freight Trip

Freight service is operating on United Air Lines from New York to Chicago, one trip, late each evening For some time the late trip has been departing in two sections, both carrying passengers mail and express The company simply puts all the passengers on one ship and the cargo on the other Frequently the freight ship is so full that not even company parsonnel have been permitted to ride As yet, no certain ship has been stripped for freight The seats are covered and cargo is stacked over them When the ship reaches Chicago it is serviced and may go anywhare on the system with passengers This one-a-day freight trip is not very important in itself, but from it the Company is gaining valuable experience which it will use later when the air system carries cargo in special planes United is especially interested in cargo, has a staff of four, headed by Charlay Gradick, putting all their time on building freight and express business. At present goods can go by air in only two ways regular air mail rates, or regnlar air express rates

CAB in Alaska

CAB recommendations for dealing with applications for route certificates in Alaska were made pubhe December 17 The report does not include Pacific Alaska Airways, subsidiary of Pan American Airways, which now operates from Seattle to Ketchikan, Juneau, Fairbanks, Nome and Bethel, because this case has already been heard by examiners

Hearings on applications from 39 carriers were held in Alaska Tha cases stand for decision by the Board

Air Transpnrt Dnings

Northeast Airlines announces a new direct air service between Bosten and Moncton.

KLM West Indies Sectioo, is resnming its serviee between Curacao and Trinidad and Trinidad and Paramaribo

Mid-continent Airlines, Inc, gets a base rate of 34 cents per airplane mile for the first 300 ponnds of mail or fraction thereof, plus 2 5 percent of such rate per mile for each additional 25 lbs or fraction, on routs 48.

United Airlines gets CAB approval of applieation to include mail service to and from Philadelphia on its New Yark Oakland route

THE WORLD'S FIRST and onty airline terminal building opened in New Yark January 9 It's at Park Avenue and 42nd Street, naar Grand Central, higgest travel center in America

AIR TRANSPORT INDICATOR

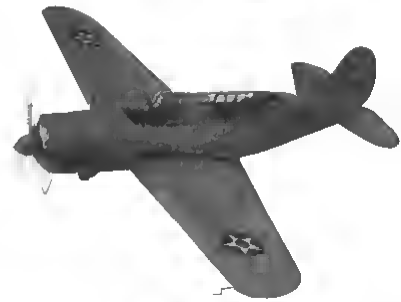
January 1, 1941

107.31

Which is the ratio of passenger miles reparted by the Air Transport Associatinn for all domestic lines for December 1940 to the figure for December 1939 Total for the indicator has continued its slump from the year's peak For the twelve months of 1940 traffic stood at 1 033 492 807 revenue passenger miles—up 7 3 per cent over November 1939

See Finance page for individual companies traffic figures

Curtiss SB2C-1 Dive-Bomber



THE latest Curtiss SB2C-1 dive-bomber, most formidable of a type pioneered by Curtiss, will endow America's aircraft carriers with deadly striking power With greatly increased speed, range, and armament, squadrons of these ships will play an important part in providing an airtight defense for the United States

Powered with a 1700 H-P Wright Cyclone 14, and equipped with a Curtiss Electric Propeller, the SB2C-1 has an exceptional reserve of power and range to extend the effectiveness of its scouting and bombing missions Like all modern Curtiss airplanes for both the Army and Navy, it is designed for mass production—in one of the three great factories with which Curtiss is augmenting its present extensive facilities for National Defense.

CURTISS AEROPLANE DIVISION
Curtiss-Wright Corporation • Buffalo, New York

The Curtiss SB2C-1 dive-bomber carries its bomb load fully enclosed for greater performance

Control Pulleys and Machined Parts for Aeroplanes!

BECAUSE it is much lighter than aluminum, strong, stable in dimensions and free from corrosion of any kind the aviation industry has found Formica to be a valuable material for a growing number of parts on aeroplanes.

It is widely used for control pulleys, fair lead bushings, machined parts for propellers, insulation for electrical systems, panel boards for instruments of either the fluorescent or ordinary type.

A very large percentage of the new planes taking the air make use of Formica in some one of these applications. One of the largest plants in the industry and a central location make Formica a desireable source of supply. Send your blue prints for quotations.

THE FORMICA INSULATION COMPANY
4628 Spring Grove Ave., • Cincinnati, Ohio

HOW LIGHT PLANES AID PREPAREDNESS

Today — *right now* — America has more than 50,000 civilian pilots — pilots who received their essential primary training in *light planes*.

And hundreds of independent flying schools are training new thousands in *light planes* under the forward Civilian Pilot Training Program.

On the alert—this great army of civilian pilots is prepared to serve, within their capacity, in national catastrophes of floods, epidemics, *and defense*. Many are already in Army and Navy Air Corps — over 2600 CPTP graduates have enlisted and nearly 700 more are awaiting acceptance. Many others are building their flying experience in their own *light planes*.

Only with *light planes* can so many pilots receive primary training and multiply their experience so quickly. Only *light planes* can be built with the speed and in the quantity to provide adequate primary training facilities. The critical need for combat ships demands all large, fast plane production capacity. Existing industry capacity for *light planes* is now over 12,000 planes annually. Low in cost, inexpensive to operate, *light planes* fit the civilian pilot's pocketbook for training—and *keep* him in the air.

Serving our Nation's defense still further is the employment and training of many workers to replenish the serious shortage of skilled labor. *Light plane* manufacturers are conducting Vocational Training Classes — teaching metal trades, tool and die work, welding, painting, motor maintenance and repair, and other skills so urgently in demand.

Yes—the *light plane* is vital in National Defense. It is helping to create a Nation of Pilots — it is keeping them flying and ready for emergencies — it is expanding airplane plant capacity and increasing the supply of skilled workers. We are proud of the leading role Taylorcraft Airplanes are playing in this indispensible phase of national preparedness.

TAYLORCRAFT AVIATION CORPORATION
ALLIANCE, OHIO

TAYLORCRAFT

AMERICA'S MOST MODERN LOW-PRICED AIRPLANE

NACA Makes Annual Report

The 26th Annual Report of the National Advisory Committee for Aeronautics was transmitted to Congress by President Roosevelt on Jan. 13. Because of the restricted nature of a large share of the research which is now being done, this year's report contained less detailed information than in many years.

Most important developments during the year were the beginning of building the new Ames Aeronautical Laboratory at Moffett Field, Calif., and the voting of funds for the engine research laboratories at Cleveland. By the end of the coming year NACA will have three laboratories in operation rather than one.

During the year demands were made on the Committee by both Army and Navy for new basic data to improve aircraft performance. The great expansion in airplane production called for new quantity production methods. Both military services stepped up their experimental airplane programs.

The trend in aircraft development, the Report points out, was toward the development of planes having higher speeds and greatly increased armament. NACA made many experiments in its full-scale wind tunnel. Trends toward increased speed and higher ceiling, toward larger and heavier engines, more armor and armament, brought a need for larger and heavier types of airplanes. These conditions established a trend toward higher wing loadings.

The committee reported it had spent much time studying the subject of compressibility shock encountered at high speeds. With increased wing loading, the study of improved high-lift devices and lateral-control devices other than ailerons has been extended. High speeds bring many attendant problems which the Committee studied, such as improved cowling and cooling of engines, the design of wing ducts, and of ducts for cooling engine auxiliaries.

Scientists at NACA have devoted much time to the study of airplane design as related to increased production in factories. Close cooperation is maintained with both Army and Navy in this respect.

As an example of research that has been of great value, the report cites the example of a new type of cylinder finning that carries heat away from cylinder walls so rapidly that the horsepower or an engine can be tripled. It was stated that the power of the present air-cooled engines can be increased from 2,000 hp. to 6,000 hp.

Budget Estimates, 1942 For Aviation Interests

The President in his annual budget estimates that the Federal Government will need the following appropriations from Congress for expenses in connection with Aviation over the coming fiscal year beginning July 1, 1941:

Army Air Corps: $1,641,641,000 in cash plus $328,328,995 in contract authority including $1,201,158,507 for 1941 aircraft contracts and $768,281 for contracts entered prior to July 1, 1939.

Navy Bureau of Aeronautics: $434,350,000 including $350,350,000 for construction of aircraft, $9,000,000 for continuing aviation development and $600,000 for travel costs including flight of new aircraft from plant to naval base.

Expediting production: $406,507,500 cash plus $194,967,500 contract authority to Secretary of War to speed production by constructing plants including aircraft plants. Of the above, $304,500,000 is to cover contracts authorized in fiscal 1941 appropriations.

Signal Corps: $46,281,944 for procurement of equipment and facilities including aircraft and radio supplies under fiscal 1941 contracts.

Marine Corps: total estimate $46,894,528.

Civil Aeronautics Administrator: $41,550,096 including $18,000,000 (tranchion of $18,000,000 from last year) for CPTP; $14,200,000 ($5,827,778 increase) for maintenance of air navigation facilities; $436,759 for technical development; $2,750,000 for enforcement of safety regulations; $300,000 maintenance and operation of Washington National Airport; $4,710,700 ($2,125,500 reduction) for establishment of air navigation facilities. In addition $30,000,000 was recommended for completion of the $50 airport development program. (To be augmented by WPA allotments.)

Civil Aeronautics Board: $1,706,275.

Domestic airmail: $31,286,927 (Increase of $540,128 over last year for moderate expansion.)

Foreign airmail: $10,707,507 (increase of $400,475.)

National Advisory Committee for Aeronautics: $4,067,800 (Increase of $1,702,900) for research including operation of NACA laboratories plus an additional $1,400,020 to continue construction of the Ames laboratory and $5,030,000 to continue work on the new engine laboratory at Cleveland.

Weather Bureau: $4,468,670 for weather aids to air navigation.

Coast Guard: $883,000 (to be available until June 30, 1942) for replacement and new airplanes and equipment.

Coast and Geodetic Survey: $182,000 for aeronautical chart projects.

Federal Bureau of Investigation: $3,759,000 (increase of $2,041,900) for investigations relating to defense.

Antitrust enforcement: $1,575,000 ($251,200 increase) for Thurman Arnold's division of Justice Department.

GEORGE ARENTS, JR., right receiving the Glenn H. Curtiss trophy from Carl Adams. George won the 10 lap race at the Miami Maneuvers in his Spartan plane at a speed of 172 m.p.h.

TWO WINNERS AT MIAMI. Miss Bobby Lupton exhibits the international trophy she won as women's aerobatic champion at the All-American Maneuvers. Jack Snodgrass of Waterloo, Iowa, has the Firestone Trophy which he won in a Taylorcraft.

Miami Maneuvers

More than 1,000 private planes were flown to Miami for the All-American Maneuvers for the three days beginning Jan. 10. Pilots from all points east of the Rockies flew to Florida for the annual show.

Mike Murphy of Findley, Ohio, won permanent possession of the coveted Freddie Lund Trophy by winning it a third time, after an amazing series of aerial acrobatics. Squeek Burnett, of Richmond, Va., who won the trophy in 1939, was only contestant besides Murphy to reach the finals.

George Arents, Jr., of Greenwich, Conn., who owns and manages the Armonk Airport in Westchester County, won the 50-mile Glenn H. Curtiss trophy race. Arents flew his Spartan Executive. Julian O'Neal won an all-Miami 10-mile race in a Luscombe at 92 m.p.h. Jack Snodgrass of Waterloo, Iowa, won the finals of the Firestone trophy race. F. H. Stark, also of Waterloo, won second place.

Edna Kidd, of New Orleans, won the Alcazar trophy race from a field of women pilots. She flew a Culver Cadet at a speed of 113 m.p.h. Catherine Rawls Thompson, famous swimmer, won second place in a Culver Cadet. Third place was won by Virginia Snadgrass, of Waterloo, Iowa, in a Taylorcraft and fourth place to Arlene Davis of Detroit who flew an Ercoupe.

A 25-mile free-for-all sportsmen's race was won by Joe Dyer of Winston-Salem, N. C. who flew a Beechcraft. Kea Olson of Racine, Wis. was second.

Intercontinent Plant

Work is progressing rapidly on the new factory being built by the Intercontinent Corporation at the 36th Street Airport, Miami. The new plant will be used for the production of a primary military trainer and for general aircraft sub-contracting. It is hoped that actual production work will start this spring.

The factory will be composed of three units: the main factory building, the office and engineering section, and a separate section to house a foundry, paint and dope shop, and a hammer and press room.

Fighter escorts are used by British in bombing raids for the first time.

Air Corps is flying pilotless planes by radio control, but only within sight.

Transatlantic speed record set by Capt. Pat Eves of London, ferrying bomber, had breakfast in Canada, tea in London. Reports say ship was Lockheed Vega Ventura.

Great Mason, CAB member, addressing Franklin Institute, Philadelphia, makes strong plea against curtailment of civil aviation in the emergency.

Edward T. Foxton is appointed manager, N. Y. office, FAA.

Piper Aircraft reported that 900 owners asked for free Gulf gas books for Florida trek.

How to get a job in Aviation is told by Charles S. Mattoon, personnel chief for Curtiss Aeroplane, in a new book.

All-American Aviation announces it will file with CAB for 7 air pickup routes covering 254 cities in New England.

Randolph C. Walker is elected chairman of board and president of Aircraft Accessories Corp. He has been influential in development of Vega Airplane Co., Menasco Mfg. Co., and Aircraft Accessories.

Commercial Aircraft Priorities Committee enlarged; includes Col. E. L. Lyons of Army, Col. Donald H. Conolly; and Merrill C. Meigs of Defense Commission.

Although air travel in December showed the sharpest seasonal decline since 1937, traffic ran about 7 per cent ahead of the same month in 1939. And for the year as a whole, preliminary estimates indicate that the domestic air lines flew 1,043,000,000 revenue passenger miles, as against 977,000,000 in 1939. New peaks were established in earning power as well as in traffic, with the industry showing a profit of about $7,500,000 last year—an amount more than twice that reported in the best previous year of 1939. Large further gains are expected in commercial air travel again this year but with equipment expansion programs somewhat restricted by the priorities board of the defense commission, the increase may not run as high as the better than 50 per cent gain experienced in 1940.

Brewster and Continental Air Lines are raising new capital, the latter company having registered 100,000 shares of common stock with the SEC while Brewster has arranged to raise $600,000 by the private sale of 50,000 shares of capital stock. Hayes Mfg. Corp. of Grand Rapids, Michigan, also has registered 300,189 shares of common stock with the securities commission.

Curtiss-Wright has the largest backlog of unfilled orders among the aircraft manufacturers while Bendix Aviation ranks first in the parts and accessory field. A rough breakdown of the Curtiss-Wright backlog of $500,000,000 shows that approximately 53 per cent are for the army, 33 per cent foreign war orders, 9 per cent navy and 2 per cent for commercial air lines. Nearly 40 per cent of the Bendix backlog of $95,000,000, represents direct U. S. Government contracts.

Here And There . . . *Piper Aircraft* recently had a backlog of 540 planes . . . *Solar Aircraft* has been approved for listing on the N. Y. Curb . . . *Engineering & Research Corp.* is producing approximately 90 Ercoupes a month, with a backlog of about $1,000,000 on hand . . . *Douglas* payroll in 1940 totaled $28,100,000, against $14,300,000 in 1939 and with completion of its Long Branch factory will have 40,000 employes with a $70,000,000 payroll . . . During 1937, 1938 and 1939 *Bendix* expended $6,256,000 on engineering and research, an amount in excess of annual profits for that period.

By Raymond Hoadley

Government financed plant expansion in the aircraft industry virtually will be completed towards the end of 1941 with peak production likely to follow early in 1942. Annual output at that time should be well past the two-billion-dollar mark as contrasted with estimated sales of $625,000,000 in 1940. Earnings this year bid fair to pass the high record established in 1940, unless that is, Congress decides to increase sharply a tax burden that already has placed a speculative ceiling on the price of aircraft stocks. Because of the extra conservative charges that will be made against plant expansion stockholders probably will receive a larger portion of remaining earnings than in past years. Meanwhile the commercial airlines are more worried over the procurement of adequate equipment facilities this year than they are over excess profits taxes—which in their case is substantially lighter than it is for the plane manufacturers.

. . . *Vultee* expects to produce 3,000 planes in 1941, as against 300 last year . . . *American Airlines* last December became the first domestic airline to carry 3,000,000 passengers . . . Air express shipments in 1940 reached the million mark for the first time . . . *United Aircraft* sales in 1940 totaled around $125,000,000, as compared with $52,000,000 the previous year . . . *Breeze Corp.* reported a $10,175,000 backlog of unfilled orders in December, 1940, as compared with $1,750,000 at the beginning of that year . . . Brewster is producing three planes a day and expects to double its output by fall . . . *Curtiss-Wright*, like its chief competitor, United Aircraft, had total sales deliveries of about $125,000,000 in 1940 . . . Earnings of *Continental Motors* for the quarter ended January 31, 1941, are estimated at $500,000, before federal taxes, in Wall Street circles . . . With sales estimated at around $10,000,000, as against $923,000 in 1939, *Republic Aviation* will report the first net profit in its history when the 1940 annual report is published . . . Gene Tunney recently purchased 1,000 shares of *Aviation & Transport Corp*, while James S. Ogelbury acquired 10,000 shares of *Fairchild Aviation Corp.*

Stainless steel is much talked of as a possible alternative to aluminum sheet if shortages get tighter or in the interest of easier mass production. North American's experiment with stainless on the wing and tail surfaces of BC-1 basic combat trainer rates considerable attention.

Furniture plant manufacture of parts is contemplated in the design of Fletcher Aviation Corp's plastic-bonded plywood trainer (primary or basic depending on hp.). A production test run of six planes is now in manufacture at Burbank.

Industry Backlog

Unfilled orders of the aircraft industry are well above $3,600,000,000, as against $700,000,000 a year ago, and are at a new high record despite accelerated deliveries recently to the United States and British governments. The Navy still has large aircraft awards to make out of the 1940 congressional authorizations and the Dutch East Indies currently are negotiating for planes. Meanwhile, plans are shaping up between the government and the aircraft and automobile industries with respect to an enlarged United States-British aircraft program. It is not expected that the motor industry will contribute heavily to aircraft production until 1942 and by that time the aircraft industry may be the largest employer of factory labor in this country. The following table gives the latest approximate unfilled orders of 23 primary producers of planes and aircraft engines. The Buick division of General Motors Corp. and the Studebaker Corp. are constructing large plants preparatory to substantial orders from the United States Government for aircraft engines.

Allison	$105,000,000
Aviation Corp.	10,000,000
Beech	22,000,000

The following literature will be sent to any reader on request direct to the firm mentioned.

Precision products—A line of precision products including switches, resistors, condensers, volume controls and similar items is described in the new bulletin issued by P. R. Mallory & Co. of Indianapolis. Form M 770 A. 40 pages, 8½ x 11 in.

The Abrams Contour Finder—Pamphlet illustrating and describing Abrams stereoscopic contour finder for use in connection with aerial mapping. Abrams Instrument Co., Lansing, Mich.

Allis-Chalmers HD 7—A 24 page two color catalog describing the Allis Chalmers 54 hp. crawler type tractor. Allis Chalmers Manufacturing Co., Milwaukee, Wis.

Lynite Lo-Ex Aluminum Pistons and Cylinder Heads—A 44 page book dealing with aluminum alloy pistons and cylinder heads. Aluminum Company of America, Pittsburgh, Pa.

Anaconda Metals in the Aircraft Industry—A handsome 18 page manual of copper and copper alloy stock materials currently used in aircraft and aircraft engine manufacture. The American Brass Co., Waterbury, Conn.

American Bonded Metals—A series of five folders dealing with various types of nickeled parts. American Nickeloid Co., Peru, Ill.

Bacharach Type 2-CP Engine Indicator—Bulletin 270. Bacharach engine indicator Type 4 MS—Bulletin 281. These bulletins describe high speed engine indicator equipment. Bacharach Industrial Instrument Co., 7606 Penn'a St., Pittsburgh, Pa.

Chemical Rubber Group No. 2 on "Glycols"—Covers characteristics of liquid coolants and other glycol compounds. Carbide & Carbon Chemicals Corp., 30 E. 42nd St., New York, N. Y.

Despatch Finish Baking and Drying Ovens—A 12 page catalog dealing with lacquer and enamel baking equipment. Despatch Oven Co., Minneapolis, Minn.

DuPont Plastics Bulletin No. 7—An interesting folder panelled for loose leaf binding dealing with recent applications of molded plastics. Plastics Department, E. I. duPont de Nemours & Co., Inc., Arlington, N. J.

Pneumax Agitators—A 4 page folder describing air motor equipment for mixing lacquers and paints. Eclipse Air Brush Co., Inc., 390 Park Ave., Newark, N. J.

War machines and munitions have to be good to stand up under war conditions. They must be made rapidly in huge quantities by a variety of plants. All parts must be strictly interchangeable.

Hence the task of guarding quality becomes a matter of life and death importance to a nation rearming to preserve its liberty.

Sheffield Visual Gages are stalwart guardians of dimensional quality. They are used in checking dimensions of manufactured and purchased parts, tools, production and master gages.

The sturdy Read Mechanism, combined with the light beam lever arm, provides a sensitivity to meet the highest precision standards of measurement—but without the delicate fragility so often associated with sensitivity.

These gages are not delicate, they are strong and deadly accurate. They are made in various models to check accurately to thousandths, "tenths" or millionths of an inch and all provide rapid, easy gaging to any limits required on production work.

Write for information.

BRUNING "75" PRINTER AND 154 BW DEVELOPING MACHINE

These two machines will provide the high efficiency print production to gear your print department to today's needs. One man can develop 1200 8½ x 11 BW Prints per hour and two men can develop 2600 8½ x 11 BW Prints per hour.

The Bruning booklet "New Light On Prints," fully describes the 75 Printer and the Model 154 Developer, and gives information about other Bruning printers and developers. Send for your copy

"We Smoothed Out Our Production 'Humps' With BW Prints!"

● A "jam" in the print department is transmitted all along the line . . . delaying poduction and shipments. That's one reason so many firms are turning to Bruning Black and White (black line) prints . . . the prints which are produced in a fraction of the time and often at lower cost than blue prints.

With BW Prints, you can really cope with today's rush business. These easier-reading prints are produced in TWO simple steps—instead of the *five* time-wasting operations necessary with blue prints. There's no washing or drying to wait for.

The BW Process, too, makes possible the volume production of prints cut to the exact size of your tracings—thus eliminating trimming

Our free booklet, "New Light on Prints," gives complete facts about BW speed and savings. Mail the coupon for your copy!

Even in these times of war, Pan American Airways continues to hold the American flag high in the air—plans have been made public recently that three new extensions can be expected in the near future, linking vital points of the British Empire and providing an improved Trans-Atlantic service. The new routes are (1) a Southern Atlantic service via Bolama (Portuguese West Africa), Port of Spain and San Juan to New York, (2) a line to Capetown via the West Coast of Africa and (3) extension of the Trans-Pacific route to Singapore.

Of these new lines, those to Singapore and Capetown vie with each other in importance. The service to Singapore, reliably reported to be in answer to State Department wishes, will form a link with the extensive British and Dutch airnets in the Far East, India and Australia. In addition, it will eliminate complications which might arise if the Dutch were granted their long-sought-after permission to fly into Manila, while the Japan Air Transport Company did not receive this privilege. By this move, the necessity of a direct connection between Manila and Batavia has been completely eliminated, and it seems improbable that further action will be taken in this matter.

Singapore, already an important link in the international airline system, will gain in importance when it becomes a terminal for P.A.A.'s Pacific service. Actually, these plans are of prime interest to both the East Indies and India, Australia is already directly served by the line to New Zealand, from where Tasman Empire Airways and other Australian lines give through connections to all important cities on the Sixth continent.

From Capetown, where the new line to South Africa will have its terminal, most of East Africa, the Near East and India will be served by British Overseas Airways, thus opening faster connections to and from the Western hemisphere. At the same time, an alternate route to England will become available via Egypt, from where there now is a regular, but unpublished airline to the British capital. Actually, the plans for an airline down the West Coast of Africa are not new; in 1938 plans were completed for a joint service by British Airways and the Holland K.L.M., and the latter made several survey flights with passengers to Capetown.

The service over the Southern Atlantic, which for the time being will only be flown in Westerly direction, will circumvent the trouble at Horta, where the sea is all too often too rough to permit the heavily laden Clippers to take off. Recent survey flights were made between New York and San Juan, while further tests between Trinidad and Bolama will undoubtedly follow shortly, as soon as the equipment is available and base facilities have been completed.

The disruption of the Atlantic services by sea conditions has been quite noticeable during recent months—the release of three of the new Boeing 314As to Britain did not come as a surprise, and further emphasizes the trend away from large flying-boats. This trend was heralded quite some time ago by the announcement of a 3-hr. landplane service to Honolulu, was further stressed by replacing the old Clippership in South America by DC-3s and the new service to Buenos Aires with Stratoclippers, and will shortly again break into the headlines when the purchase of about a dozen large landplanes in the 80,000 pound class is announced.

The airport at Lisbon was developed with an eye on Trans-Atlantic landplane service; another large airport is available on the Island Sal in the Cape Verde Group, while there are any number of airports in the United States and Latin America which are suitable for 40-ton landplanes, including the reported airport development at Bermuda.

Many Aluminum Alloy structures, heretofore assembled by riveting, are now being spot welded with complete success. The results, in many instances, are cleaner construction, more rapid production, and lower assembly costs.

Progress in the spot welding of Aluminum has been rapid during the past two years. Research has developed accurate welding techniques. Machines are now available which give exact regulation and synchronizing of pressure, current and timing. Strong, dependable spot welds are made on a production basis.

Practically any of the Aluminum Alloys in common use can be spot welded to give uniformly strong and efficient joints. Alcoa engineers welcome the opportunity to advise you on the welding of Aluminum. Write ALUMINUM COMPANY OF AMERICA, 2182 Gulf Building, Pittsburgh, Pennsylvania.

DEFENSE COMES FIRST

To meet the needs of the National Defense Program, plus the normal demands of peace, a vast expansion of our already greatly increased production capacity is being speeded. When the emergency is past, there will be more Aluminum available than ever before.

Meanwhile, if you can't get all the Aluminum you want when you want it, remember Aluminum is helping you by helping to meet the National emergency.

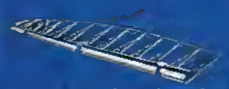
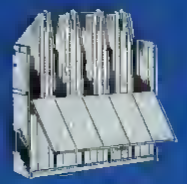
Boeing STRATOLINERS

STAINLESS STEEL *in Military Aircraft*



This aileron for a Seversky P-35 pursuit plane of the type shown at the right is a light, strong structure of spot-welded 18-8 stainless steel.



Stainless steel provides these bomb chutes with smooth, corrosion-resistant surfaces which resist the wear of fast moving projectiles.

Corrosion cannot interfere with the operation of these stainless steel ammunition chutes because the rust-free surfaces will remain smooth.

DESIGNERS and manufacturers of military aircraft find stainless steel an ideal material for an increasing number of applications. A few such applications already common on military planes are illustrated. Consider these four inherent advantages of stainless steel and what they mean to you:

1. **Excellent Strength-Weight Ratio**—compares favorably with other commonly used materials. *Result:* Strength with light weight . . . greater fuel capacity . . . longer cruising range.
2. **Ease of Fabrication** — by modern high speed welding processes. *Result:* Faster production . . . smoother surfaces . . . less drag . . . higher speeds.
3. **Corrosion Resistance** — immune to atmospheric corrosion. *Result:* No painting . . . faster production . . . less maintenance. No corrosion losses . . . lighter sections . . . less dead load.
4. **Strength at High Temperatures** — up to 1650 deg. F. *Result:* Resists hot corrosive gases and abrasion . . . longer life . . . increased dependability. Fireproof . . . greater safety.

We do not make steel but for over thirty years we have produced "Electromet" ferro-alloys used in making steel. The fund of data on stainless and other alloy steels thus accumulated and the assistance of our metallurgists are available without obligation. A request on your letterhead will bring the book, "Stainless Steel in Aircraft," which describes more fully the advantages of this versatile metal in the aircraft industry. Electro Metallurgical Company, Unit of Union Carbide and Carbon Corporation, 30 East 42nd Street, New York, N. Y. In Canada: Electro Metallurgical Company of Canada, Limited, Welland, Ontario.

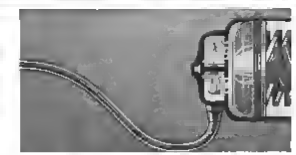
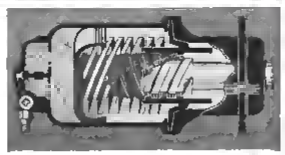
1 *Fuel charge contained in the cartridge is electrically ignited in the starter breech, which is usually conveniently located in the cockpit*



2 *Initial pressure propels ignited fuel through stainless steel intake tube to combustion chamber in starter, where combustion is completed*



3 *Pressure actuates piston, producing, through helical splined shafts, rapid acceleration of the engine. Automatic valve releases pressure*

BREEZE MARK

Radio Ignition and Auxiliary Shielding • Multiple Circuit Electrical Connectors • Flexible Shielding Conduit and Fittings • Conduit Junction Boxes.

Cartridge Engine Starters • Dichromate Cartridge Containers • Inconnel Tie Rods • Propeller Pitch Controls • Elevator and Rudder Tab Controls

Flexible Shaft and Case Assemblies • Aeroflex Jr. Flexible Instrument Lines • Tachometer, Fuel Pump and Remote Control Drives • Ammunition Rounds Counters • Radio Tuning Units

Generator and Ignition Filters • Exhaust Gas Analyzers (Fuel Air Ratio Indicators) • Flexible Metal Tubing • Resistance Type Thermometers • Swaging Machines and Tools.

Stainless Steel Division: Pioneers in the design and development of stainless steel structures and fabricated products

THE Breeze Cartridge Engine Starter provides starting at the touch of a finger—trigger-quick starting, but with smooth, powerful action from slow-burning, cartridge-contained fuel. It constitutes no drain on the battery, no matter how often used, for the current of a flashlight cell is sufficient to ignite the Breeze cartridge. Cartridges are light, easily carried

The Starter operates equally well Summer or Winter. It is used today for engines rated as high as 2200 H.P., because the starting torque it develops is sufficient to turn such an engine through at least two complete revolutions. It is one of many products which have earned leadership for Breeze in the Aeronautical accessory and equipment field.

Manufactured under Curtiss-Wright patents

LAWRANCE *Auxiliary* POWER PLANTS

PERFORM DOUBLE-DUTY SERVICE WITH THE NAVY

AFLOAT AND ALOFT—ot stond-by or under woy—Lowrence Auxiliories provide o vital electricol power source for the Novy. With the air fleet, they serve on multi-engined lang range patrol bombers by Martin, Consolidated and Boeing. On surfoce croft, this same reliable powerplont does "deep woter duty" with potrol torpedo boats of the Novy's rapidly growing "Mosquito Fleet."

Selection of Lawrance Auxiliaries for the PT boats by engineers of the Elco boat company lends additional emphasis to the wide utility application of Lowrance Power Plants. This installation features the special aircraft 24 volt, DC generator, driven by a 15 horsepower air-cooled engine. The auxiliary is identical with the aircraft model except for the use of a sea level carburetor in place of the aircraft type. Its contant load output of 5KW and peak load capacity of 7½KW meets all electrical drive requirements far starting each of the three Packard 1350 horsepower engines . . . for aperating the heating and lighting systems, as well as various forms of armament equipment.

Modern manufacturing facilities . . . quality controlled production, ensures maximum reliability and efficient performance of light-weight auxiliary powerplants by Lawrance.

LAWRANCE ENGINEERING AND RESEARCH CORPORATION

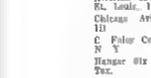
VREELAND MILLS ROAD • LINDEN, N. J., U. S. A.

ESSENTIAL ACCESSORIES ON MULTI-ENGINED AIRCRAFT OPERATED BY LAWRANCE AUXILIARIES

MAIN ENGINE STARTERS | ELECTRIC PROPELLERS | RE-ICING EQUIPMENT | AIR COMPRESSORS

POWER DRIVEN GUN TURRETS | BOMB BAY HOOKS | BOMB HOISTS | OTHER ARMAMENT REQUIREMENTS

RADIO | NAVIGATION LIGHTS AND INSTRUMENTS | CONTROL SERVO-MECHANISM | RUNNING LIGHTS



GALLEY HOT PLATE | LIGHT AND HEATING SYSTEM | CABIN SUPER-CHARGERS | BILGE PUMPS AND OTHER EMERGENCY EQUIPMENT

Lawrance Auxiliaries Provide Electrical Power for Operating Accessories In dependent of the Main Engine Supply

EQUIPPED TO PRODUCE

Experience plus proper modern equipment creates the productive capacity so necessary to speed manufacture of planes for our Nation's defense. Shown here are some of the many items of advanced new equipment added during the past year to already existing facilities. * * * Fourteen years of experience in the building of outstanding aircraft stands behind Bellanca products. Where once parts were produced by the score, now literally hundreds and thousands of aircraft units come streaming through the Inspection Department, ready for assembly into military aircraft. * * * For the private owner and commercial operator, Bellanca has set aside a special building known as the "Commercial Factory", wherein production will be continued as usual on the Bellanca Cruisair and the Model 14-14 low wing training plane.

Aviation's DIRECTORY OF
SCHOOLS

(There are approximately 800 flying schools in the country. Lack of space prevents including them here. Nearly all of the distributors, who are listed beginning on page 171, give flight instruction. A free list of all flying schools may be secured from the Civil Aeronautics Administration, Commerce Bldg., Washington, D. C.)

Note.—To conserve space the various courses offered by the schools listed below have been keyed as follows:

A—Airline Operations
C—Correspondence
E—Engineering
F—Flight
I—Instruments
M—Sheet Mechanics Courses, such as welding, sheet metal blueprint reading etc
MM—Master Mechanics Courses for A & E Licenses
R—Radio
O—Other Miscellaneous Courses

T & W Forgings for the Aircraft Industry

T & W forgings embody "quality advantages" which reduce machining time to a minimum, and remove restrictions that would otherwise impede production. T & W forging activities include:

Drop and Upset Forgings: T & W produces drop and upset forgings, weighing from a few ounces up to 800 pounds, simple or complex designs, from carbon, alloy, and special steels.

Forging Dies: T & W operates one of the largest and most skillful die-making departments in the industry, utilizing the most modern die-sinking machines with which to accomplish the completion of dies in record time.

Inspection: T & W inspection is responsible directly to management, and includes magnaflux inspection for aircraft forgings, utilizing modern magnaflux testing equipment within its own plant.

Engineering Assistance: T & W engineers comprehend all requirements relating to each operation in producing and finishing hundreds of different shapes and sizes of forgings for aircraft. These engineers are seasoned by years of active cooperation with designers and engineers of aircraft who are responsible for a wide variety of equipment.

Buy T & W Forgings. They Cost Less at the Point of Assembly. Consult a T & W Forging Engineer on Your Next Forging Job.

FORGINGS
USUALLY COST LESS AT THE POINT OF ASSEMBLY

TRANSUE & WILLIAMS STEEL FORGING CORPORATION
ALLIANCE, OHIO

SALES OFFICES: NEW YORK • PHILADELPHIA • CHICAGO • INDIANAPOLIS • DETROIT • CLEVELAND

As ship after ship rolls off the production lines of the leading aircraft builders in the United States and Canada, it will be found that three out of four are finished in Berryloid Aircraft Finishes.

Whatever tests are imposed . . . whatever the requirements may be . . . color, durability or time-saving characteristics in the finishing room . . . Berryloid Aircraft Finishes meet them completely.

"Get 'em into the Blue"

...off the production line...into the sky

MATERIALS...parts...supplies stream into Vultee plants from every point of the compass. Out the factory doors flows a steady stream of completed airplanes...ready to fly for defense.

Back of every operation, permeating the entire Vultee organization, there's a primary production objective best expressed in the simple phrase: "Get 'em into the Blue"...into the Blue for the U.S. Army Air Corps and the foreign democracies.

Early in 1941, Vultee becomes one of the first aircraft manufacturers to complete its current expansion program, representing an increase in plant area of 1300%. Decentralization of manufacturing facilities into 3 complete divisions together with other innovations will enable Vultee to multiply deliveries 10 times during this year.

Above illustration—Largest single delivery of airplanes to U. S. Army Air Corps. 31 Vultee BT-13 planes in mass formation over Vultee Field, California

Stinson Aircraft, a division of Vultee is now in production on a new commercial plane for 1941. Write Stinson for complete information.

To Win Success in Commercial Aviation

At Parks you learn not only *how* to do things but *why* they are done

PREPARE Yourself

with PARKS LEADERSHIP TRAINING

PARKS AIR COLLEGE was founded August 1 1927

Has enjoyed full Federal approval longer than any other aviation school.

Is accredited as its Aeronautical Engineering School by the Illinois Superintendent of Public Instruction.

Is accredited by the United States Office of Education of the Federal Security Agency.

Graduates are qualified educationally for appointment as flying cadets in the U S Army Air Corps and for flight training in the U.S. Naval Air Reserve.

Has a capacity enrollment of 300 commercial aviation students 216 U S Army Air Corps flying cadets and 48 enlisted mechanics.

Has its own airport with a school plant of 25 buildings devoted to school purposes entirely, also two fields of 566 acres and 96 acres for military flight training.

Has a faculty of 32, each especially qualified for his particular field of instruction.

You'll find at Parks opportunity for original creative thinking—an essential qualification for successful leadership.

IF YOU desire to climb to positions of trust and responsibility in commercial aviation, you must *prepare yourself* for *that* goal. For it's your individual preparedness — your preparation training — that largely determines the extent of your success in later life.

Therefore, select your school most carefully. Then you can be assured in advance of adequate preparation for leadership in your chosen industry.

The purpose of Parks Air College is to provide you with a solid foundation of essential technical skills, *plus* a well-rounded background of the knowledge and the understanding of basic principles involved in aviation's development. You learn not only *how* to do things, but *why* they are done. You develop your capacity for independent, creative thinking — an essential qualification for successful leadership.

As proof of the value of Parks leadership training, you'll find an active demand in aviation for all Parks graduates. Also, you'll find that former graduates have moved up to such advanced positions as chief engineer, chief meteorologist, chief pilot, captain, first flight officer, traffic manager, factory manager, service manager, sales executive and many, many others of importance and responsibility.

Parks offers you four courses, each providing basic preparation for advancement in a major field of aviation. They are: Professional Flight and Executive, Aviation Operations and Executive, Aeronautical Engineering and Maintenance Engineering.

We invite you to send for complete information which is included in the free 64-page catalog. Send the coupon or a post card request today.

This Example Best Exploins the Enormous Assistonce Offered by CARDOX

EXTINGUISHING SYSTEM FOR AIR FIELD, HANGAR AND TEST-BLOCK FIRES

TON OF CO_2 SNUFFS OUT IN 1 MINUTE HI-TEST GAS AND OIL BLAZE IGNITED BY HOT ENGINE

Temperature Drop from 1000°F. to 110° Below Zero, Prevents Re-Ignition

A unique means of foiling sabotage and prevent ing production delays by accidental fires is being installed in aviation engine plants and offers all round protection to factories hangars ware houses etc As recently demonstrated at a mid west air field the remarkable performance of this system for releasing carbon dioxide in great volume promises freedom from test block fires and consequently faster engine production

In one of a series of test block cells conditions far worse than ever encountered in practice were set up with the corresponding CO_2 release nozzles and 4 ton tank of the Cardox System Fires were started and results recorded

In the most extreme fire aviation gas was fed at the rate of 10 gallons a minute to discharge on the engine exhaust drip pan and floor A gallon of cylinder oil was poured around the drip pan on the wooden platform and floor The engine was run until very hot, when the gasoline supply lines were opened The resulting fire was both quick and violent set in 60 seconds Cardox completed an extinguishment job which impressed spectators as supernatural Not even smouldering sparks were fonnd in the charred wood of the platform

Cardox offers unique advantages in extinguishing fires by the instant smothering and cooling action of CO_2 stored at low pressure and low temperature in centralized tanks of large capacity ready to release at any one of many locations in confined interior or open outdoor spaces by room flooding or direct application at rates so rapid as to give the highest extinguishing efficiency for a wide variety of fire hazards

The CO_2 gas is manufactured in strategically located plants transported by fleets of special Cardox operated vehicles distributed to the zone through Cardox designed ate effectively and

● In this way the ability of Cardox to handle the severest fires was proved and can be taken as evidence covering all the lesser hazards of manufecturing plants A complete bulletin with all details on this case is included in the Cardox Data File, sent on request

TO PRIVATE OWNERS, OPERATORS, DEALERS, DISTRIBUTORS, MANUFACTURERS . .

Franklin

ONLY

FRANKLIN

OFFERS THE

COMPLETE

POWER RANGE for light planes

FRANKLIN leads again with a complete range of power to satisfy the most exacting requirements. A line of superb engines from 65 to 130 H.P backed by 40 years of aircooled experience and complete with the most modern accessories for new ease of operation. Why accept less when Franklin offers plus performance, unsurpassingly smooth and quiet . . at lower first cost and economy of operation.

Learn the "sweet" feel of Franklin's *plus-power* . . fly Franklin once and you'll *specify Franklin always.*

Flight View of the Vought-Sikorsky Scout Monoplane

the Flying Fleet's newest scout

SHEETS OF PLEXIGLAS form the permanently transparent windows on the new Vought-Sikorsky monoplane Sheets of this same acrylic plastic also form the windows, landing light covers, commander's domes and blisters on every type of military airplane now being made On commercial aircraft as well, PLEXIGLAS is used for its light weight, high impact strength, durability and permanent transparency

The near-unanimous specification of PLEXIGLAS for difficult formed sections and large transparent areas is a result of its performance—proved by years of actual service—in all types of aircraft.

AVIATION'S STANDARD TRANSPARENT PLASTIC

PLEXIGLAS

PLEXIGLAS is the trade mark Reg. U. S. Pat. Off. for the acrylic resin thermoplastic sheets manufactured by the Röhm & Haas Company.

RÖHM & HAAS COMPANY

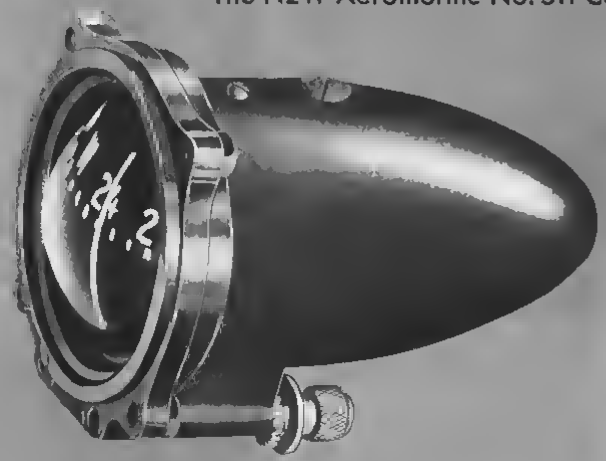
Loose magnets NOW ABOLISHED!

The NEW Aeromarine No. 511 Compass



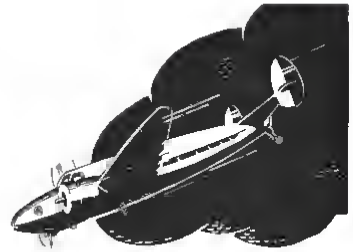
AEROMARINE'S new No 511 Compass has many outstanding features. A built-in compensator automatically eliminates loose magnets. Its unusually large card makes for easy reading. The compass is built to standard A N mounting dimensions, and is constructed of a one-piece bakelite case. Write now for complete details and price.

AEROMARINE INSTRUMENT CO., INC.

420 Lexington Avenue, New York, N. Y.

STOP

...and think this over



YOUR taps dies and gages may be as great a factor in increasing your production as thousands of dollars worth of new machine tools.

"G. T. D. Greenfield" tools and gages are backed by 50 years of engineering effort, which has developed the *reliability* and the *sustained accuracy* which is such a vital need in the Aviation Industry today.

Large-scale operations demand mass production methods. Call on the experience of "G.T.D. Greenfield" engineers. Give them the chance to study your threading problems. Their recommendations often result in increasing thread production by 15% or 20% without increasing tool cost and with *actual reduction of spoilage*

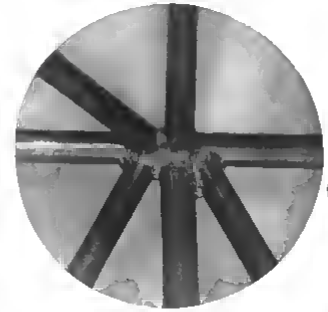
OHIO craftsmen know from experience the cold drawing characteristics of carbon and special alloy steels. Particularly the cold drawing of Chrome Molybdenum Aircraft Tubing which was initiated by OHIO

●

Proper welding technique is paramount in the welding of Aircraft sections of this type

But the success of this technique can only result if the quality of the tubing has been uniformly controlled. Restricted chemical properties - control of grain size, and hardenability are important factors considered in the production of OHIO Non-oxidized Aircraft Tubing.



OHIO QUALITY *allows* NO COMPROMISE

Fifty years have elapsed since the first seamless cold drawn tubing manufactured in this country was produced at SHELBY, OHIO.

Since that time, the art of cold drawing seamless steel tubing at the same site in SHELBY, OHIO has been passed on from generation to generation with constant improvement in practice. And with it, continuous years of association with those manufacturers who are primarily concerned with a uniformly good product.

This present generation of OHIO craftsmen who carefully watch the drawing of each tube know that OHIO'S standard of quality demands the best in surface finish and exacting tolerances. They are quick to detect and correct any imperfections in the drawing process, which has always been considered one of the important steps in seamless tubing manufacture at SHELBY, OHIO.

Clean Non-oxidized finish - accuracy of size - uniformity of anneal, for good machinability and ductility - certified steels and physical properties are yours when you specify OHIO Quality Tubing

"OHIO" QUALITY
32 Years Continuous Production Under this Trade Name

ANOTHER WAY ELECTRICAL POWER IS SPEEDING PRODUCTION

MORE PLANE PARTS PER DAY

Because Westinghouse Developed a Furnace

Normally when steel is heat-treated it undergoes a form of surface deterioration called "decarburization." Correcting this defect takes time . . . slows down production.

Westinghouse solved this production problem with a new type of furnace . . . a furnace with an "Endogas" atmosphere that delivers heat-treated parts with bright, clean surfaces—parts that need a minimum of finishing . . . in many cases none at all.

This development has made possible the production of more airplane engine parts per day.

The furnace itself requires no expensive accessories . . . is simple to operate . . . easy to install. The newly developed "Endogas" atmosphere, which is produced from ordinary city fuel gas, can be used for the treatment of all SAE steels. Proof of results is found in reports like this—"In one shift we hardened 20,000 small alloy bolts. This would have taken a week in our old furnace, with the added cost and delay of pickling."

Your production problem may not be that of hardening steel. But remember, Westinghouse maintains a corps of engineers whose entire time is devoted to solving production problems for industry. Their job is to help you. Use their services freely.

The radial air-cooled Double Wasp Engine, built by Pratt & Whitney Aircraft Division of United Aircraft Corp., is the most powerful engine ever installed in a fighter. It is rated at 1850 h.p. for take-off, and capable of delivering 1600 h.p. at an altitude of more than 20,000 feet

"America's Fastest"

FIGHTER IS SKF-EQUIPPED

A meteor shoots across the sky . . . and this new Vought-Sikorsky fighter strives to keep pace—leaving old speed records behind . . . giving an air-minded world a vision of speeds to come. But what of the bearing that takes the impulses of 18 cylinders on the crankshaft of the Pratt & Whitney Double Wasp engine? It's not new. It's the old time-tried bearing that airplane engine designers everywhere know as SKF.

FOR THE QUICKEST VIEW OF MALLORY'S BROAD SERVICE TO AVIATION

THERE is scarcely a phase of aviation to which Mallory does not make important contributions. Aircraft manufacturers have found the way to better, stronger, faster welds through welding tips, wheels and dies of Mallory Alloys. Engine manufacturers have brought longer lived ignition efficiency to their products through electrical contacts of Mallory Metals.

In the field of aircraft communications the use of Mallory Approved Precision Products is almost universal. Aircraft transmitters, receivers, direction finders, directional beams, landing beams, radio compasses . . . to all of these Mallory makes important contributions. Even airports are better lighted with ribbons of Mallory Tungsten.

Whether you are concerned with aircraft manufacture, operation or maintenance, remember that Mallory is an important contributor to each.

Concrete Runways at Rhode Island Airport

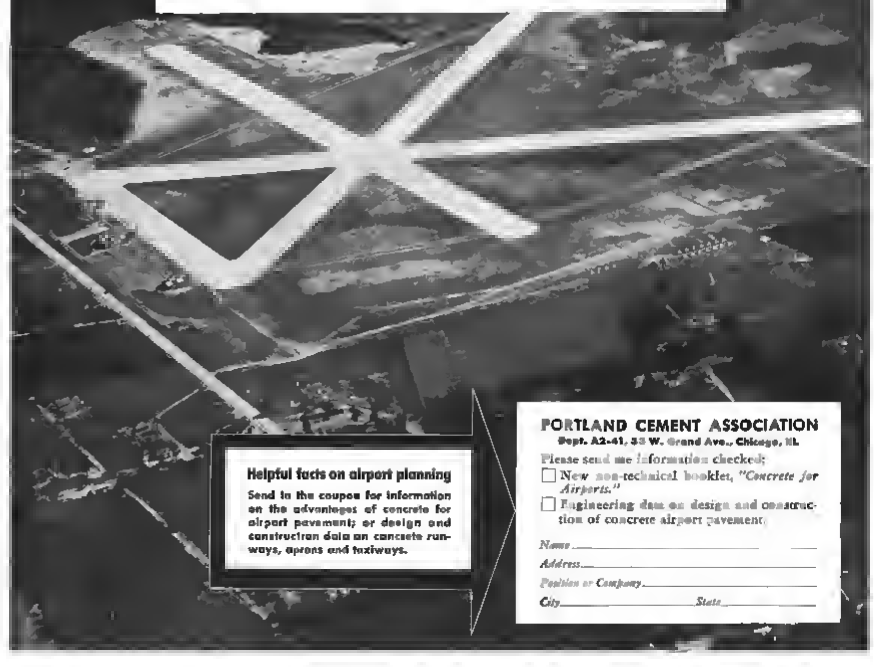
give Top Service at Bottom Cost

Rhode Island State Airport has three concrete runways, each 3,000 ft. long by 150 ft. wide. Maintenance required in five years of service is "not one red cent," said Willard M. Fletcher, Chief of Rhode Island Division of State Airports and Administrator of Aeronautics.

And it's much the same at other concrete paved airports: *little more than routine sealing of joints is needed to keep runways always ready.*

And besides—

- Concrete runways not only save maintenance but *cost less to build* than other pavements of equal load-carrying capacity. The big planes need concrete's beam strength!
- Concrete's *high visibility* is a welcome safety factor day and night; permits substantial savings in the cost of airport lighting.
- Concrete's *true, even surface* protects landing gear from excessive strain, reduces skidding, assures adequate drainage with low crown.
- Concrete's dependable *strength* makes your airport always prepared for—anything!
- Save money! Save mishaps! Specify concrete for runways, taxiways and aprons.



Helpful facts on airport planning

Send in the coupon for information on the advantages of concrete for airport pavement; or design and construction data on concrete runways, aprons and taxiways.

PORTLAND CEMENT ASSOCIATION
Dept. A2-41, 33 W. Grand Ave., Chicago, Ill.

Please send me information checked:

☐ New non-technical booklet, *"Concrete for Airports."*

☐ Engineering data on design and construction of concrete airport pavement.

This engineer is making final adjustments on cabin controlling oilnators, elevators wing flaps and rudders. In this ship, as in other famous commercial, private, and service aircraft, all control cable is of American Tiger Brand Aircraft Strand and Cords.

Steady Nerves FOR ANOTHER GIANT AIRLINER

HERE are control cables that are engineered and produced with the same precision as both power plant and structure of the newest aircraft. Only the finest steels go into their manufacture. Every wire of every cable is cold-drawn to high tensile strength through accurate dies, under the direction of men who specialize in the making of control cables that are as sound and trustworthy as modern science can make them.

That's why so many aircraft designers and builders specify American Tiger Brand Strand and Cords. That's why you'll find them used in America's finest ships.

MEET GOVERNMENT SPECIFICATIONS

American Tiger Brand Aircraft Strand and Cords are available in either tinned galvanized or U S S Stainless Steel in the following constructions:

19-wire Strand	semi-rigid
1 x 7 Cord	flexible
7 x 19 Cord	extra flexible

These products offer ruggedness of strength, excellent fatigue resistance and minimum stretch. They are fully in accord with the latest U-S Army and Navy specifications.

AIRPORT CONSTRUCTION

McLaughlin Air Service

Orangeburg Conduits have been installed in airports from coast to coast. More than 197,000 feet of Standard and over 330,000 feet of Nocrete are in service at La Guardia Airport.

Practical Suggestions

for the Airport Engineer responsible for Design, Development, and Maintenance

for main service and connections between buildings

Orangeburg Standard encased in concrete is the most economical construction where duct-banks of four or more ducts are involved. For nearly half a century this conduit has been serving leading utilities, railroads, municipalities and industrials, protecting power cables underground with this type of construction.

for field lighting, control lights, boundary lights, beacons and markers

Orangeburg Nocrete is most economical for field services as it can be installed underground without concrete encasement. Its characteristics of mechanical strength combined with exceptional deflection make it ideal for airfield service where ground stresses and settlement are encountered.

Send for this Catalog

What it is, how it is used, what it does, how it saves time, trouble and cable, all the answers are contained in Catalog 40-A, a twenty four page fully illustrated catalog which will be sent to you without cost or obligation.

Suggestion 1 Install all cables for beacons, markers, boundary and field lights *underground in conduit*. Then—when your airport "grows"—the field extended or lights added—it will not be necessary to disrupt traffic while you rip up ground to replace or add cable. Conduit will give you an underground raceway through which cables can be pulled in or out easily and economically for cable failure, rearrangement or expansion. Conduit will protect the cable as well.

Suggestion 2 Before you specify conduit, investigate the many advantages of Orangeburg Standard and Nocrete Conduits. Both provide *permanent* raceways—both provide *complete* cable protection. *Permanent* because being essentially hard coal-tar pitch, Orangeburg is essentially everlasting—*complete* because corrosive underground water cannot penetrate Orangeburg's walls or joints and reach the cable sheath. And—Orangeburg offers economy—plus. Its cost is about half that of metal pipe—and it handles easier, assembles and installs faster than *any* conduit.

EXIDE KEEPS A STRIDE AHEAD
of national defense requirements

AS the world's leading manufacturer of aircraft batteries, Exide is closely in touch with the varied requirements of the entire industry—and is meeting delivery schedules for every need.

The confidence of the aircraft industry in Exide Batteries has resulted in their world-wide use. They are standard equipment with many of the leading manufacturers—they are first choice with experienced owners of private planes—they fly millions of miles yearly in transport ships—and they are playing their dependable part in military service the world over, in primary trainers and the most advanced types of military aircraft alike.

Exide Engineering Service is available to co-operate with the industry in determining precise battery needs. Exide's vast experience, in this and all other storage battery fields, assures you of recommendations fully in keeping with the requirements.

Telephone or wire your engineering questions and delivery needs

Standardization

that is revolutionizing *Aircraft Carburetion*

THE *performance*-facts regarding Stromberg Injection Carburetionare familiar now to all aviation engineers. It saves a great deal of gasoline, which translates into greater load capacity or greater range Employing fixed size metering jets, it automatically, instantly, adjusts itself to proper fuel-air mixture ratio for all altitudes, however violently swift the dive or climb It is extremely reliable and quite simple to overhaul

With our whole industry striving mightily to *standardize* production wherever possible, another Stromberg distinction becomes very significant

The basic metering mechanism is identical in all Stromberg Injection Carburetors Only the throttle body and attaching flange need be altered to adapt the carburetor perfectly to various engines

Results straight line production for utmost manufacturing efficiency and lowest costs, one service procedure on all engines, simplifying, systematizing and speeding overhaul work

Though we are, naturally, doing everything possible to help speed our nation's Preparedness Program, we are not too busy to answer gladly the legitimate queries of interested engineers of the industry The full facts on Stromberg Injection Carburetion are vitally important Address

NON-FERROUS
Melting Costs . . .
POWER DIVE

MOTORIZED FURNACES
for melting
BRASS—BRONZE—ALUMINUM—MAGNESIUM
and other NON-FERROUS ALLOYS

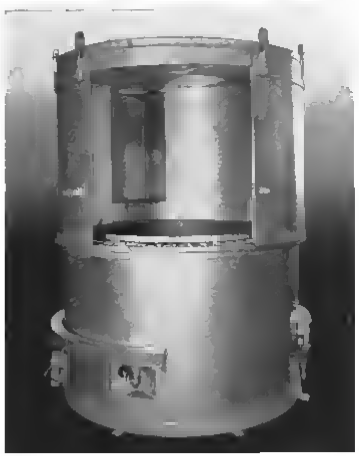
The Fisher Motorized Nose Pouring Melting furnace is the most recent addition to the complete line of Fisher Furnaces. It can be supplied for any crucible size available and for iron or steel pots. Largest capacity made to date—2000 lbs. of magnesium metal.

The Fisher Nose Pouring Furnace features a constant pouring arc; a positive and instantly controlled pouring rate reduced overall furnace height; elimination of arduous labor during pouring operation.

The complete Fisher line includes all standard designs of both stationary and tilting furnaces. The Fisher M. N. P. furnace is fully described in Bulletin No. 57. Write for your copy.

IRON POT FURNACES
FOR MELTING—ALLOYING—HOLDING OIL CASTING METAL

Melting costs as low as 11¢ per ton are accredited the Fisher Iron Pot Melting Furnaces. A few of the design features making this low cost possible are: proper combustion of gases before leaving combustion chamber; correctly proportioned flue area to size of furnace; elimination of dead pockets of inert gases; granting freedom of circulation and uniform distribution of hot gases to entire pot surface; tangential firing burners; high grade insulated refractory lining and rugged construction. Available in gas or oil fired units with capacities from 100 to 10,000 pounds in zinc. Write for Bulletin No. 101.



Melting time is reduced and new standards of uniformity are established, with a material saving in melting costs, by the individuality of furnace design and construction resulting from Fisher's thirty-five years of experience in foundry equipment manufacture. Fisher engineers will counsel to co-ordinate equipment to plant conditions for maximum efficiency. Consult Fisher engineers on your melting problems.

Vega Announces the Vega 35

AN ALL-METAL PRIMARY-SECONDARY TRAINER

THE NEW VEGA is a low-wing, training airplane, designed specifically to meet the rigid C. P. T. P. requirements for both primary and secondary training. At the same time it conforms to all primary military training specifications. It is the first and only airplane to meet *all* these needs.

The Vega 35 offers training schools excellent serviceability and features never before found in *one* airplane. Students learn the *right* form—right from the start of their training. Excellent visibility within line engines...perfected stall control characteristics... wide tread landing gear with individually controlled brakes...and wing flaps for low landing speed. Such features simplify the job of the instructor and inspire confidence in the student.

* Illustrated above is a typical Simmonds-Corsey application to "cushioned" power. Note rigid conduit at actuating end, flexible conduit terminals at operating end

Powered by the Pratt & Whitney Double Wasp, the most powerful engine ever installed in an airplane of its class, this new Vought-Sikorsky fighter for the U.S. Navy has been hailed as the fastest of them all.

Advanced in every detail of design and construction this new Vought-Sikorsky is notable for its "soft" engine mounting. As an integral part of this "cushioned" power plant, Vought-Sikorsky engineers have employed Simmonds-Corsey Flexible Controls for both throttle and mixture.

An illustrated bulletin descriptive of Simmonds-Corsey Controls will be sent without obligation if requested on your business letterhead.

Your own examination of Dunco Aviation Relays and Solenoids will offer convincing proof that here are units which have kept full pace with the rapid changes and more exacting requirements of aviation, both military and commercial. The reason is this: Far from being ordinary stock units, Dunco Aviation Relays have been specifically designed for their purpose. Dunco engineers have worked hand in hand with leading aviation equipment manufacturers—and have proved the resulting products in actual service. Moreover, in addition to the usual production care and tests, Dunco Aviation Relays are specifically aviation-tested for current; vibration; high frequency; altitude; shock and high-speed timing.

NEW AVIATION RELAY BULLETIN... Just Out!

Write for your copy, today. Lists and describes Dunco units designed for special aviation requirements. Ask for Bulletin P24. Dunco general catalog also gladly sent upon request.

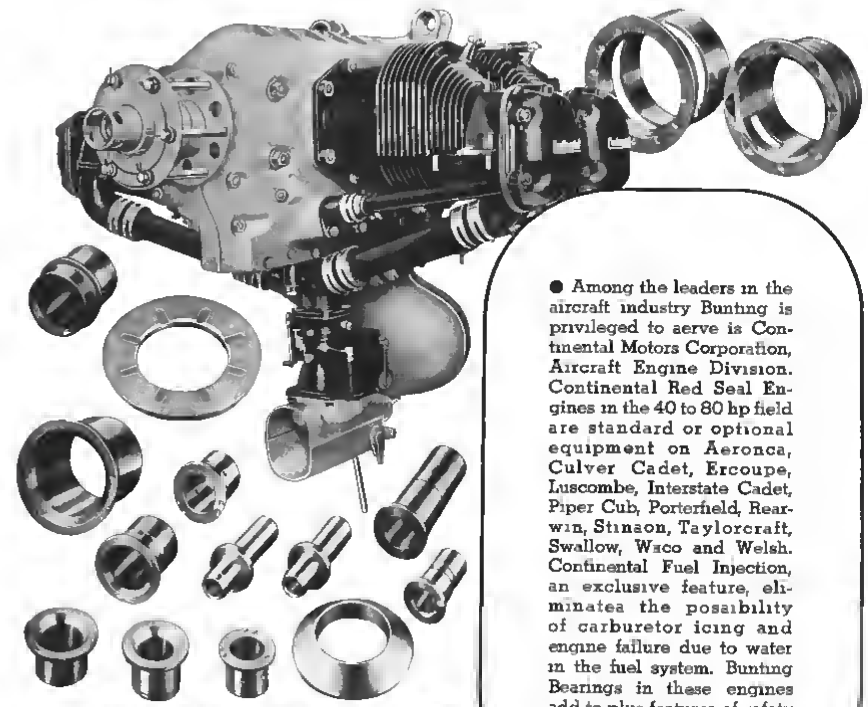
AVIATION LOOKS TO *Bunting* FOR *Bronze Bearings*

● Because Bunting experience, special knowledge and production facilities fully meet the severest and most exacting requirements in mechanical industry, this company today is supplying precision bronze bearings to leading manufacturers of aircraft and aircraft engines. If you have a bearing problem or requirement, here is the place to bring it . . . The Bunting Brass & Bronze Company, Toledo, Ohio. Warehouses in all Principal Cities.



● Among the leaders in the aircraft industry Bunting is privileged to serve is Continental Motors Corporation, Aircraft Engine Division. Continental Red Seal Engines in the 40 to 80 hp field are standard or optional equipment on Aeronca, Culver Cadet, Ercoupe, Luscombe, Interstate Cadet, Piper Cub, Porterfield, Rearwin, Stinson, Taylorcraft, Swallow, Waco and Welsh. Continental Fuel Injection, an exclusive feature, eliminates the possibility of carburetor icing and engine failure due to water in the fuel system. Bunting Bearings in these engines add to plus features of safety and dependability.

DOWN TO EARTH FACTS ON LANDING SAFETY

It's a Fact that tire failures are an important cause of landing accidents.

It's a Fact that Firestone engineers have succeeded in designing and building airplane tires that are safer and stronger, yet lighter and longer lasting.

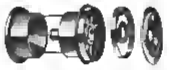
It's a Fact that Firestone Safti-Built Airplane Tires are the only aviation tires made with the *extra* protection of the *patented* Gum-Dipped cord body and the *extra* wear of a super-strength tread at NO EXTRA COST TO YOU!

It's a Fact that more and more Firestone Safti-Built Airplane Tires are being used on military planes, airliners and private airplanes. Insist on them when you buy a new plane or put a set on your present plane TODAY!

Firestone Safti-Built Airplane Tires provide EXTRA strength for rough landings. Available in non-skid or smooth tread

Firestone Airplane Tubes are built of strong, heat-resisting rubber. One-piece construction, nothing to throw tire off balance

Firestone-Shinn Wheels, A. T. C. Approval No. 63, are lighter and stronger. Equipped with Timken bearings. Short axle, less bending moment



Revolutionary light weight brake WILL NOT grab or chatter. Operates on mechanical or hydraulic systems. A. T. C. Approval No. 63

Firestone

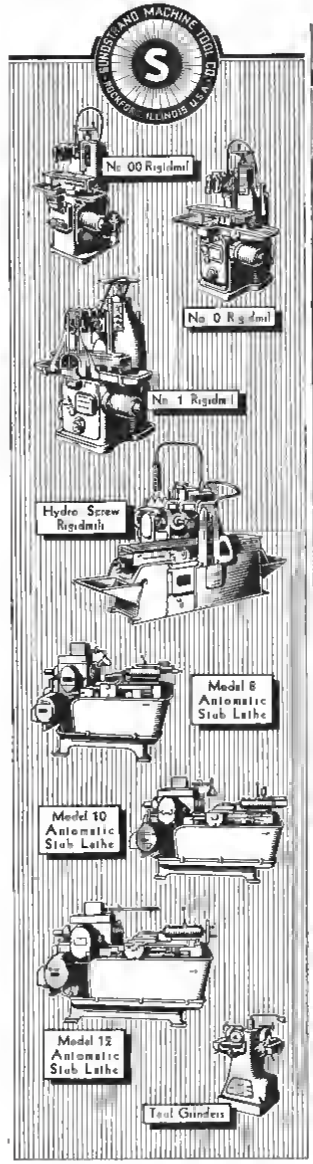
Sundstrand *Works* For Peace



★ When airplanes, tanks, big guns, small arms, and other defense equipment mean peace . . . then Sundstrand works for peace in a big way. ★ For example, the two-way automatic hydraulic cycle, and other features of the No. 0 Rigidmil shown above contribute to a 57% increase in production on milling bodies for airplane propeller governors. Same Rigidmil also handles 14 other jobs effectively. ★ Other Rigidmils in many other plants mill parts galore for 'planes and engines. ★ Stub Lathes, too, work for peace through adequate defense by turning airplane engine cylinders and pistons, bushings, shells and countless other turning, boring, forming, facing jobs. ★ Principal Sundstrand machine tools are sketched at left. Investigate their extra-productive capacities, adaptability and value. While working on advance-dated deliveries now, we are always at your service for engineering new production. Write, today, for complete information.

Every member of our organization gladly makes the vow:
"I pledge allegiance to the Flag of the United States of America and to the Republic for which it stands, one Nation indivisible, with liberty and justice for all."

With a wing span greater than the height of a 17-story building the new Douglas B-19 carries a bomb load of 18 tons and can fly non-stop one third the way around the world. By serving the needs of both the Government and Civil Aviation, Douglas acquired the experience and vast facilities to make so great an airplane possible. Thus from the cradle of the airliners comes the world's largest bomber to help make America supreme in the air.

DOUGLAS

FIRST AROUND THE WORLD — *first in Hemisphere Defense*

Speed-up

the cleaning of landing gear parts and sub-assemblies with this new, highly efficient, sand blasting equipment.

● **AIRCRAFT** manufacturers are finding Ruemelin Sand Blast Cabinets a valuable aid in maintaining production schedules. They put sand-blasting operations on a faster, more efficient basis for cleaning parts after welding or annealing. Sand or steel abrasives used. Simple to operate. No skilled labor needed. Built for long, continuous trouble-free service. Widely used by U. S. Government air defense forces and private airports for maintenance work. Cabinet made in many sizes.

Write for literature on our complete line of sand blast equipment, dust arresters, fume collectors and compressed air dryer systems.

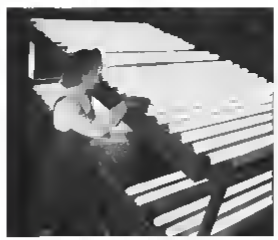
What every Aviation Executive should know about Fluorescent Lighting!

QUESTION *What is fluorescent lighting?*
ANSWER G-E Fluorescent Lighting is a brand new source of illumination—a source in which the light is produced not by a filament, but through fluorescent powders coated on the inside of long glass tubes. These powders convert invisible ultra-violet energy into visible light.



IN THIS "life-test" G-E MAZDA F *lamps burst shy and high to help assure the high standards set by G-E research*

Q. *What are its advantages for me?*
A. Its higher efficiency and greater coolness permit offices, factories, and tool rooms to have higher levels of illumination, with less glare, than has ever before been practical. Since people see faster, with less fatigue in better light, you should expect increased production, reduced spoilage, fewer mistakes, greater safety, and improved employee morale when fluorescent lighting has been properly installed.

Q. *Why should I insist on G-E MAZDA Fluorescent Lamps?*
A. G-E MAZDA F lamps are the latest product of General Electric Research and Development — a combination which for 61 years has been giving America more and more light at lower and lower cost. Since G-E MAZDA F lamps were introduced in 1938, efficiency has been increased as much as 40% and prices reduced as much as 45½! Today's G-E MAZDA F lamps are made to give maximum light output for current consumed—made to *stay brighter longer!*

Q. *What about fixtures?*
A. You can choose from a wide variety of individual styles. General Electric cooperates with many fixture manufacturers, and does not make fixtures itself. Your G-E MAZDA lamp distributor can supply styles and types to fit every store — complete with G-E MAZDA F lamps, all ready to use.

Fixtures bearing the Fleur-O-Lier or RLM tag assure you of maximum fixture performance because they are certified by Electrical Testing Laboratories to comply with exacting specifications. Such certification may be obtained by any fixture manufacturer whose product meets required specifications.

HERE *a skilled technician places a 100-watt G-E MAZDA F lamp in giant "electric eye" that measures light output.*

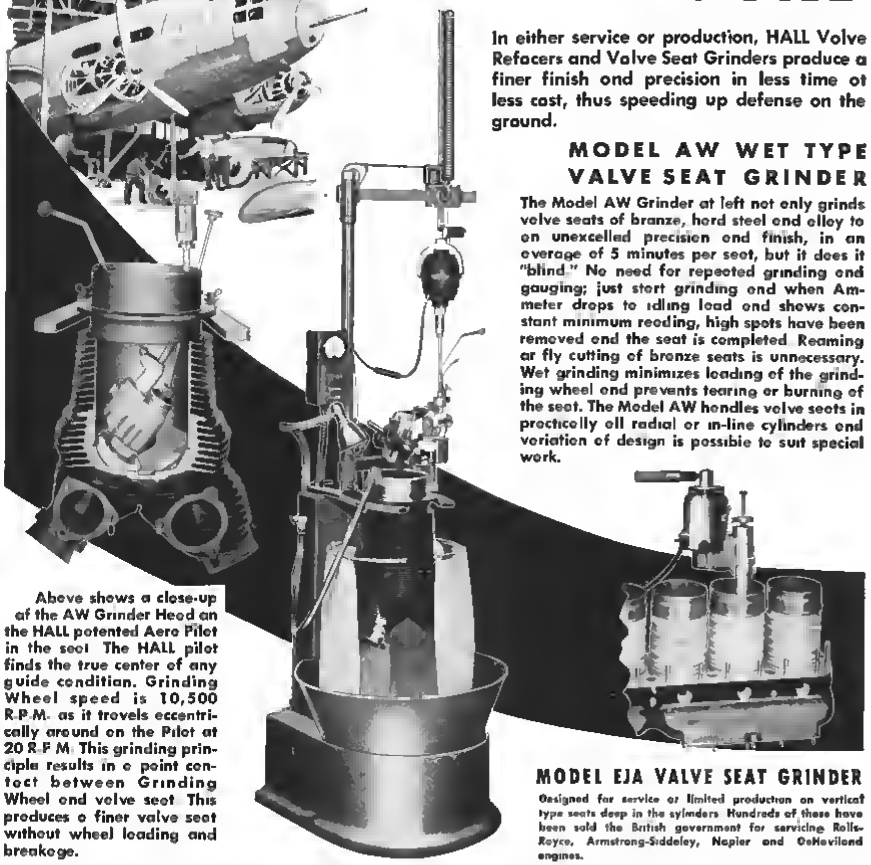
THIS MACHINE *tests brightness of fluorescent powders used in G-E MAZDA F lamps to assure maximum light output throughout life*

Q. *What should I do now?*
A. See your G-E MAZDA lamp distributor. He can help you choose the fluorescent fixtures that exactly meet your needs, and he can draw on all the resources and experience of the General Electric Company to see that you get the best possible fluorescent lighting properly engineered to your needs — at the lowest possible cost. Your local lighting company can also give you valuable advice.

G-E MAZDA F LAMPS *are recommended for use only with equipment providing good power factor, such as Fleur-O-Liers or RLM Industrial fixtures. The label shown here identifies Fleur-O-Lier fixtures, made by over 40 experienced manufacturers.*

G-E MAZDA LAMPS
GENERAL ELECTRIC

IN PRODUCTION
HALL EQUIPMENT
ON THE GROUND



In either service or production, HALL Volve Refacers and Valve Seat Grinders produce a finer finish ond precision in less time ot less cast, thus speeding up defense on the ground.

MODEL AW WET TYPE VALVE SEAT GRINDER

The Model AW Grinder at left not only grinds volve seats of bronze, hord steel ond olloy to on unexcelled precision ond finish, in an overage of 5 minutes per seot, but it does it "blind." No need for repeoted grinding ond gauging; just stort grinding ond when Ammeter drops to idling load ond shows constant minimum reoding, high spots have been removed ond the seat is completed. Reaming or fly cutting of bronze seats is unnecessary. Wet grinding minimizes loading of the grinding wheel ond prevents tearing or burning of the seat. The Model AW hondles volve seots in prociocolly oll radial or in-line cylinders ond voriation of design is possible to suit special work.

Above shows a close-up of the AW Grinder Heod an the HALL potented Aero Pilot in the seot. The HALL pilot finds the true center of any guide condition. Grinding Wheel speed is 10,500 R.P.M. as it trovels eccentrically around on the Pilot at 20 R.P.M. This grinding principle results in o point contoct between Grinding Wheel ond volve seot. This produces o finer valve seot without wheel loading and breokoge.

MODEL EJA VALVE SEAT GRINDER

Designed for service or limited production on vertical type seats deep in the cylinders. Hundreds of these have been sold the British government for servicing Rolls-Royce, Armstrong-Siddeley, Napier and DeHaviland engines.

THE HALL MANUFACTURING COMPANY, TOLEDO, OHIO

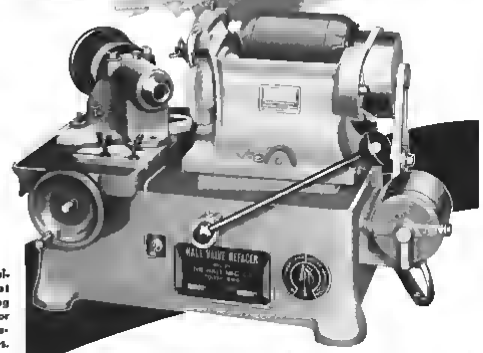
HALL

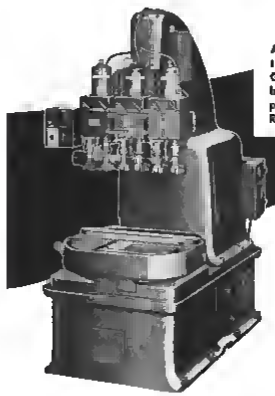
OR SERVICE
SPEEDS UP DEFENSE
- IN THE AIR

The finer finish ond precision ottained with HALL Equipment meons improved engine performance and maximum power ot all altitudes, thus it speeds up defense in the air.

MODEL 80-A WET TYPE VALVE REFACER

A wet type Volve Refocer thot produces a volve foce of o precision ond finish to motch the precision ond finish of the volve seot ground with HALL Equipment. Micrometer Feed permits operator to know exact omount of metal being removed. individuol motor for Workheod has rheostot control, providing variable speeds. Workheod con be accurotely locoted for 10 different angles. For example valves moy be refoced accurotely to 29° 30' ond 43° 30', etc. Speciol design collet prevents grinelling of volve stem. These and many other features moke the 80A the finest Refocer for servicing airplane valves.





At left is shown multiple spindle Seat Grinder of type being built for Packard for production of Rolls-Royce Merlin Engines.

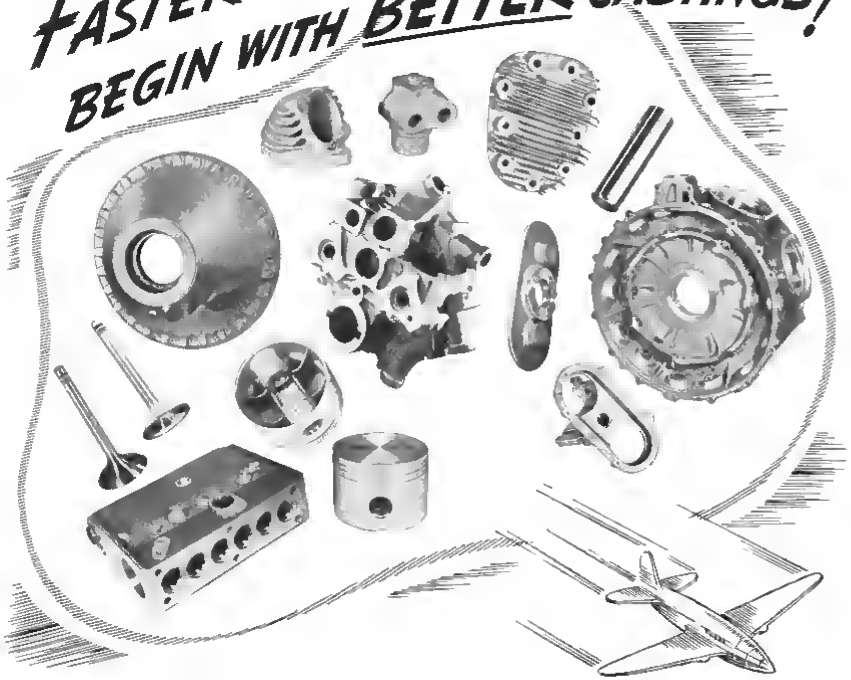
A PARTIAL LIST OF USERS OF HALL VALVE SEAT GRINDERS AND VALVE REFACERS

Ford Motor Co. for production of P & W engines, Ranger Engineering, Lycoming Division Aviation Mfg. Corp., Aircroft industries, Eastern Air Lines, inc., Wright Aeronautical Corp., Pon-American Airways, inc., Continental Motors, Aircraft Factory Philadelphia Navy Yard and other major Naval Repair Depots, War Dept. Air Corps at Wright Field and other major Army Repair Depots; in Canada: Pratt & Whitney Aircraft at Montreal, Ottawa Car and Aircraft Co. and others. England: Approved by British Air Ministry for use in service by R. A. F. and for production of Rolls-Royce, Armstrong-Siddeley, Napier and DeHaviland engines; South African Railways, Royal Dutch Air Lines, Roumanian Government, individual factories in France and others.

THE HALL MANUFACTURING COMPANY, TOLEDO, OHIO

WORLDS LARGEST MANUFACTURER OF PRECISION VALVE AND VALVE SEAT GRINDING EQUIPMENT .....

FASTER FLYING, SAFER PLANES BEGIN WITH BETTER CASTINGS!



YOU MEN, who are charged with the job of making planes fly faster, longer and in greater safety — know that many of your problems are often solved by a slight change in castings.

Permite offers a pioneering experience in the aluminum alloy field. Ample laboratory facilities and specialized engineering skill enable us to supply officially approved aluminum and magnesium alloy castings for aircraft engine and body parts made to standards established by the Federal Specification Board, U. S. Army Air Corps and Navy Aircraft Department.

Whatever your needs in castings, whether for crankcase sections, cylinder heads, housings, pistons, or other engine or fuselage parts, you will find our engineering staff glad to cooperate with you in working out recommendations and supplying quotations. Choice of the correct alloys, Permite distinctive improvements in casting and heat-treating processes, and critical inspections at every step of production, assure you of highest quality. Write or wire us—today!

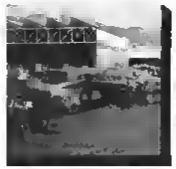
BENDIX RADIO ON LOCKHEED FLEETS AT HOME AND ABROAD

Receivers, Transmitters and Compasses Standard Equipment on Many Lockheed Airliners and Military Craft

Reliability Proved In All Types of Service

(Photo Courtesy Lockheed)

The Lockheed Hudson Bomber, now being constructed for the British, has won its spurs in actual combat with the Royal Air Forces of Britain and Australia. This bomber is noted for its ability to withstand direct hits by anti-aircraft fire, and is being used by the British for reconnaissance work. Many Lockheed Hudsons are equipped with Bendix Transmitters, Receivers and Radio Compasses.



nal Tune-Up of a flight Lockheed Hudson ombers destined for rvice with the British oyal Air Force. Bendix nolded Radio Comss Loops, part of the endix Equipment on ese Bombers, can be en atop their cabins

Lockheed Bombers aff for service overseas, hned up at the Burbank Airport, ready for deliverys. Lockheed Hudson Bombers equipped with Bendix Radio are now in service with the British and Australian Royal Air Forces.

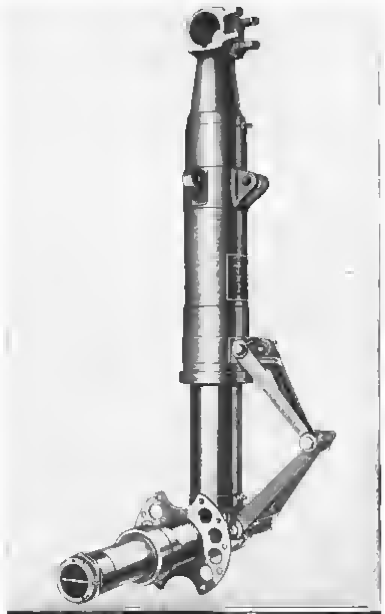
Bombers Go Ta Sea! How Lockheed Hudsons are shipped abroad, canvas-covered and with windows, doors and ventilators taped and sealed. The entire craft is sprayed with a special corrosion-resisting compound to protect all parts from moisture.

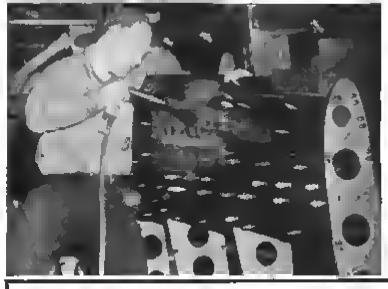
Famous Lockheed Lodestar said to be America's fastest Air Transport. The Lodestars have a cruising speed of 220 miles per hour, accommodations for 14 passengers and a crew of three. Many have been equipped with the Bendix TA-2 8-channel Transmitter, RA-2 and RA-4 Receivers, MN-26 Compasses and MM-3 Static Cartridges. More than 50 Bendix-Equipped Lodestars are in service on major airlines at home and abroad today.

BENDIX RADIO—STANDARD FOR THE AVIATION INDUSTRY

GENIUS—AMERICAN STYLE

Cleveland Pneumatic Tool's Contributions to America's Coming Air Supremacy





★ America's supremacy in the air is a foregone conclusion. It is only a matter of time—and not a long time, either.

Cleveland Pneumatic has made three significant contributions to the engineering genius that guarantees this supremacy.

First is the Aerol Landing Strut, which for years, has been acknowledged the world's finest shock-absorbing landing strut. It is preferred by aeronautical engineers the world over and has proven its infallibility under every climatic and geographic condition. We are proud to be able to offer these struts in quantities ample to keep ahead of plane construction.

Second is the Cleco line of aircraft tools—particularly the specially designed riveters and squeezers for wings and fuselage fabrication. These riveters and squeezers—more than five dozen in number—offer aircraft manufacturers the *right* tool for every riveting operation.

Last, but not least, are those small but astonishing gadgets known as Cleco Sheet Holders. Almost as simple as clothespins, they hold sheets in position during riveting. They eliminate punching and drilling special holes and the use of bolts and nuts. They are easily inserted and removed with a special tool. *They step up production.*

Cleveland Pneumatic Tool engineers are at your service to put these products to the best possible use in America's defense emergency. Please feel free to call upon us any time.

THE CLEVELAND PNEUMATIC TOOL CO.

3734 E. 78TH STREET ★ **CLEVELAND, OHIO, U. S. A.**

"Make a date" with an AERONCA

THE AERONCA *Super Chief*

SHAKE off the monotony of commonplace living and soar to new horizons in the sweetest-flying plane you've ever seen. She's gentle as a dove . . . but there's the sturdiness of an eagle in her every movement. She has poise, she has dash, she has beauty and safety! You'll sense this as soon as the prop bites the air . . . you'll feel it as you streak along in the drowning room cabin. And, when she lands on those oil cushioned oleos . . . mant . . . / that's when you'll want an Aeronca! But, there are so many reasons why you should buy an Aeronca that only a flight will tell the whole story. So make that "date" now . . . don't put it off . . . get your dream ride in America's dream airplane.

AERONCA GIVES WINGS TO THE WORLD

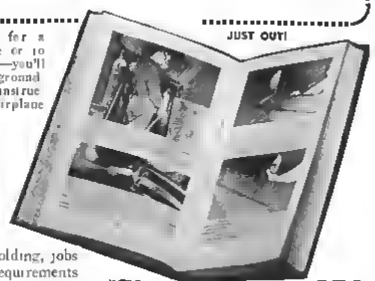
At last . . .

the one complete, practical manual of modern methods to help you excel in

AIRPLANE MECHANICAL WORK

NO matter whether you are preparing for a job on aircraft factory production line or in airport service shop—or already have it—you'll welcome this new book with its thorough ground work in airplane mechanical work, its many instructions, methods, and fine illustrations on airplane construction, maintenance, and repair jobs.



JUST OUT!

HOW AIRPLANES ARE MANUFACTURED
HOW TO SERVICE AND REPAIR THEM

told in this thorough manual to help you get and keep an aviation mechanic's job

THIS is a complete, practical manual for those aiming for, or holding, jobs in airplane factories or as airplane mechanics. It covers the requirements of the mechanic's work, the procedures, and all the details of various operations in clear, simple text and many illustrations. It makes plain the fundamentals of airplane structure, flight, and operation; describes every operation in manufacturing light and heavy airplanes; and gives instructions for doing all the inspection, servicing, and repair jobs of airplane maintenance.

HERE IS A VALUABLE TOOL

for the ambitious mechanic who wants to move ahead in this rapidly expanding industry. It gives simply and concisely the facts on construction and maintenance of modern planes of every type, large and small, civil and military—to put you in line for better paid jobs in greater demand.

THE AVIATION MECHANIC

Many topics such as these to help you

MASTER AVIATION MECHANICAL WORK

- Nomenclature
- what keeps a plane up
- stresses
- truss type, monocoque and semimonocoque fuselages
- wing spars and ribs
- propeller of metal and wood
- forms in which metals are supplied for an aircraft factory
- heat treating
- welding
- plating, cleaning, and painting metals
- rivets
- tubular fuselage
- making spars
- cutting sheet metal
- assembling wing panels
- covering wings
- making the fuselage
- how to make inspections
- how to make an engine warm up or run
- how to make repairs
- construction of engines, including radial, V-12, and other systems
- starters, propellers, etc.
- engine trouble adjustments
- how to overhaul an engine
- airline maintenance methods

By CARL NORCROSS

Asst. Editor, *Aviation*, Member, Aeronautic Educational Commission, N. Y. City Board of Education

and JAMES D. QUINN, Jr.

Lieut. (j.g.) U. S. Naval Reserve, Mgr. Approved Repair Station 267, Certificated Aircraft Ground Instructor, Certified Aircraft and Aircraft Engine Mechanic

Just out! 563 pages, 537 illustrations. $3.50

THIS book covers everything the mechanic needs to know—requirements of the work, kinds of jobs there are, all about the plane itself, procedures of manufacturing, servicing and repairing it, and the actual methods of every operation, from riveting, paint to varnishing, plaster, from patching a wing to inspecting a stratoliner.

COMPLETELY COVERS FACTORY AND AIRPORT JOBS
PROFUSELY ILLUSTRATED

After introductory data on the airplane and how it flies, the book takes up construction of planes and plane maintenance, giving an unusually complete treatment of materials and methods, and describing every step in building a light all-metal plane. With carefully selected and numerous photos it shows how modern planes are built in large factories. The book treats everything in a way that will be helpful to the learner or the man who is new to the work. The typical routines of private, commercial and military airfields are outlined as well as specific jobs of servicing, inspecting, overhauling and repairing airplanes. The book tells how to do the basic jobs of riveting, welding, sewing, cleaning, doping, etc., and also shows where they are used in the aircraft production line and at the airport.

SHOWS YOU WHY AS WELL AS HOW

Especially helpful in the material briefly and plainly explaining the fundamentals that underlie effective mechanical work. With this you are able to handle jobs more efficiently and advance your ability more quickly because you understand fully the operational effect you are aiming for, the reasons for any mechanical work on airplanes.

SUITABLE FOR PILOTS

The book contains more than sufficient data for student pilots who are taking the aircraft operations ground school course in the Civilian Pilot Training Program. The aerodynamics and engine servicing sections meet the qualitative requirements for both private and commercial pilot's certificates of competency.

ALL-WEATHER WINDSHIELD WIPER

1. *The Acrotorque All Weather Windshield Wiper* is a safety unit of prime importance in keeping aircraft windshields clear during rain, snow and icing conditions. The device is of electromagnetic overthrow, hydraulically operated and transmits its abundance of power to the wiping blades. The design embodies simplicity of construction, lightness of weight and flexibility of mounting.

Since the actuating motor may be remotely installed and the component parts fixed in various locations the blades can be set to wipe from a top, bottom or side arm with respect to the windshield. Thus the Acrotorque Wiper is adaptable to almost all types and sizes of windshields. Blades are available which incorporate an alcohol dispensing system for area under icing conditions.

Proven efficient, flexible and highly adaptable, the Acrotorque All Weather Wiper is one of the most important all new safety accessories available for aircraft.

ACROTORQUE

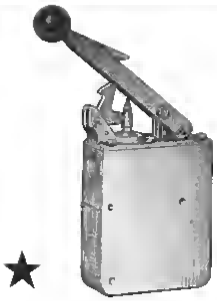
—an organization dedicated to specialized Hydraulic research and engineering—has spent years in the development of hydraulic devices of which the All Weather Windshield Wiper and the Fast Feathering Control Valve announced herewith are cardinal examples.

Both products have been fully approved and are functioning satisfactorily on major aircraft in daily flight where they are important contributors to safety and efficiency.

Production has been tuned to the needs of the day and satisfactory deliveries can be made.

That Acrotorque will offer further advances and improved products in the field of Hydraulics for Aviation is asserted, since its organization is constantly delving into the numerous possibilities of Hydraulic activating mechanisms. Its extensive engineering and research organization is dominant to serve and share in the progress of the aircraft industry and to render every cooperation in the program of National Defense.

Correspondence is invited with those who are interested in its present products or with those desirous of making use of its extensive Hydraulic engineering and research experience.



FAST FEATHERING CONTROL VALVE

2. The Acrotorque Feathering Control Valve is approved for use with the Hamilton Hydromatic Propeller. This safety device has been designed to assist in the fast feathering of the propeller in the event of emergency. Purely hydro-mechanical in its action it imposes no additional load on the airplanes source of electrical energy. It is light weighing less than 3 pounds and can be installed by numerous methods and in various locations available to convenient operation.

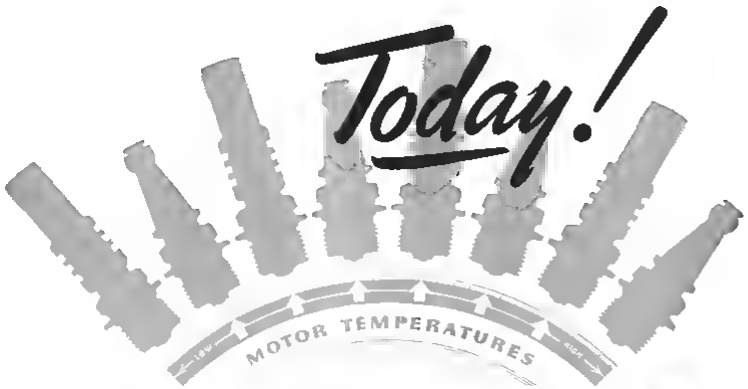
CHAMPION gives you

Tomorrow's Spark Plugs

Today!

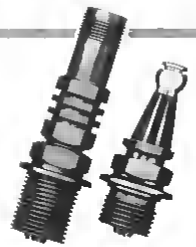


Thirty years devoted to the development and manufacture of spark plugs exclusively has earned for Champion Spark Plugs a world wide reputation for quality, dependability and better performance that is without equal The quality standards of Champion Spark Plugs have never been at a higher level than today, with the result that more engineers are looking to Champion for the most advanced spark plugs for aircraft, cars, trucks, tractors and marine engines

In aviation the production of Champion's well known mica types has been enormously stepped up to meet the requirements of Army, Navy and commercial orders

Production is likewise now under way on the recently announced Champion ceramic-type spark plug which has so successfully met the extreme stresses and service requirements of the latest high-output engines

We believe that the Champion policy of devoting all of its resources to research, engineering and manufacture of spark plugs, and nothing but spark plugs, is the reason why Champion is able to provide the aviation industry with tomorrow's spark plugs today.



You're always ahead with Champion!

10-YEAR-OLD WACOS in active service

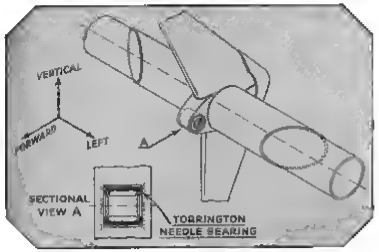
● Built in 1930 and 1931, these Waco trainers NC864V and NC11267 are in daily use at the United Flying Schools of America, Inc., Vail Field, Los Angeles, California. Alongside of four new trainers purchased early in the fall of 1940 by the same school, the old Wacos accept their assignments of student flyers.

What more conclusive evidence, could be asked, of Waco's sound design, experienced engineering and competent workmanship . . . of the Waco's assured, profitable life?

For your new trainers specify the trainer with an established record . . . WACO . . . one of the oldest names in aviation. Waco Aircraft Company, Troy, Ohio, U. S. A. Cable address: Waco Troyohio.

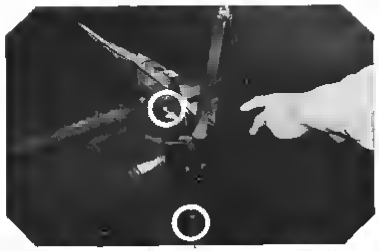
United Flying Schools of America, Inc., own six Wacos. In addition to their commercial students' course and their quotas of primary CPTP students, they are now training an advance instructor refresher students and thirty collegiate students

TORRINGTON NEEDLE BEARING SIMPLIFIES DESIGN, CUTS MAINTENANCE COSTS IN REARWIN CLOUDSTER



1 Rearwin Aircraft & Engines, Inc., selects Torrington Needle Bearings for points of greatest strain in elevator and rudder assemblies of its Cloudster. View shows Needle Bearing location in elevator. "Freedom from servicing and replacement makes the Needle Bearing ideal for these hard-to-reach points," reports R. W. Rummel, Rearwin's Chief Engineer.

2 Assembly design is simplified—with consequent savings in weight—by the use of the compact Torrington Needle Bearing. The simply designed housing is welded in place and the bore reamed to size. Holding the Needle Bearing in line with a cylinder gauge, this Rearwin mechanic aptly demonstrates how its small size and unit construction facilitate assembly.



3 Circles show location of the Needle Bearings in the completed tail assembly. High radial load capacity and long service life, outstanding features of the Needle Bearing, are essential at these locations from a maintenance standpoint.

4 Torrington Needle Bearings demonstrate their ability to withstand severe service in rigid ground tests on the Cloudster. Sand and shot load the tail surfaces to 1,318 pounds—over 3 times the maximum load necessary to balance the plane in flight.

If you have a bearing problem where high load capacity, small size, light weight, ease of assembly and lubrication are vital considerations, investigate the advantages of the Torrington Needle Bearing. Our Engineering Department will be

glad to work with you in adapting these advantages to your assemblies. For detailed information, write for Catalog No. 114. For Needle Bearings to be used in heavier service, consult our Engineering Department for special types and designs.

$\frac{5000}{500} = 10$

a Star for Performance

Republic ENDURO Heat-Resisting Steel in United Air Lines Air Preheater Cluster, after operating 10 TIMES AS LONG as the material previously used, is still in service!

And this service is anything but easy. The hot exhaust gases inside the cluster, designed and built by United Air Lines, raise the temperature of the metal to 1300 degrees. Air passing around the outside of the tubes is sky temperature—often well below zero. The service is so tough, in fact, that the metal originally used required replacement after 500 hours. And that was a good figure when consideration is given to the number of hours in the air of other parts of an air liner.

Then Republic ENDURO* Heat-Resisting Steel—a star performer wherever high temperatures are a factor—was given a trial. It has been in service now for better than 5000 hours—10 times as long as the material previously used—WITH NO INDICATION OF FAILURE. As a result, ENDURO now is standard for replacements.

Keep this short, true story in mind when you need a metal that will resist high temperatures and corrosion—that provides a high strength to weight ratio—for fire walls, collector rings, exhaust stacks, boilers, cartridge starters, battery compartments, lavatory compartments, galleys and a host of other applications.

Literature giving complete technical information on the various grades of Republic ENDURO Stainless and Heat-Resisting Steels will be sent on request. Write Republic Steel Corporation, Alloy Steel Division, Massillon, O.; General Offices, Cleveland, O.

Illinois Gets Big Airplane Engine Plant

An airplane engine plant in Illinois to employ 4,000 persons is an expansion [illegible] Studebaker

Industrial Advantages of Illinois Adaptable to Defense Production

Speed-up of the National Defense Program has been accelerated by the decision of the Studebaker Corporation to build a plant in Illinois for the manufacture of airplane engines and parts, in order to take full advantage of the outstanding facilities of this State for stepped-up production.

Reservoir of skilled labor available in Illinois was one of the important factors in selection of this State for site of new plant, officials stated. Other factors prominence of Illinois in the Metal Working Industry assuring adequate supply of needed machines, tools, and service, proximity of large steel mills resulting in prompt, economical service

***THE LOGICAL LOCATION IS**

Illinois

8 GOOD REASONS For Locating Aircraft and Parts Plants In Illinois

1 GOOD LABOR SUPPLY. Illinois has 2,500 metal working plants employing 300,000 wage earners proof of the adequate supply of workers of the type required in aircraft and parts manufacturing.

2 MATERIALS AND PARTS. Illinois is located close to abundant sources of supply for materials and parts—is in the center of steel and non ferrous metal foundries and machine tool manufacture so important to this industry.

3 TRANSPORTATION. Illinois is the center of railroad and air transportation, with direct lines to every section of the State and country—has the finest system of paved roads of any state.

4 CENTRAL LOCATION. Illinois is near the geographical center the industrial center and center of population of the Nation, and is the hub of the huge Middle West market.

5 IDEAL TESTING CONDITIONS. Illinois' wide range of climate permits testing under all flight conditions. Both land and water ports are available adjacent to manufacturing sites.

6 LEAST VULNERABLE LOCATION. Illinois is a safe distance inland from all coasts—a vital consideration for uninterrupted operations under all circumstances.

7 A LEADER IN AVIATION RESEARCH. Illinois has extensive facilities for research in aviation, with several great schools specializing in this important function.

8 MILITARY TRAINING BASES. United States Army aviation training bases in Illinois (Chanute Field at Rantoul, and Scott Field at Belleville) permit close coordination of research, design, manufacturing, testing, and determination of requirements for both commercial and military use.

Write the Illinois Development Council at Springfield today, for a special report on the advantages Illinois offers manufacturers of aircraft, engines, parts, and accessories. Please list any special problems or requirements in labor, materials or manufacture, in order that a truly practical and informative report may be submitted for your consideration. Your inquiry will, of course, be kept strictly confidential. Write—

VOUGHT-SIKORSKY

"MODEL OS2U-1"

OBSERVATION-SCOUT-PLANE

is Equipped with

NORMA-HOFFMANN PRECISION BEARINGS

This latest product of Vought-Sikorsky Aircraft (Division of United Aircraft Corporation), Stratford, Conn., is being produced under large quantity orders for the U. S. Navy. Designed primarily as a seaplane to be launched from battleship or cruiser catapult, it is convertible to a landplane for service ashore. Unique design features give this monoplane type the lift and controllability at low speeds hitherto realized only in the slower biplane type.

In achieving this result, NORMA-HOFFMANN PRECISION BEARINGS are employed in the controls—on surface control push-and-pull rods, on engine control units and control rods, and on aileron, flap, tabs, rudder and stabilizer hinges—as well as in cockpit sliding sections.

Identified with the aircraft industry from the earliest days of aviation, NORMA-HOFFMANN PRECISION BEARINGS are today used by practically every American builder of aircraft and aircraft equipment (including the U. S. Government)—whether for military, commercial or private use. There is a PRECISION BEARING for every load, speed and duty, available in 108 series and more than 3000 sizes.

WILCO

WILCO THERMOMETALS (Thermostatic Bi-Metals) are as outstanding in performance as WILCO CONTACT MATERIALS

Confidence in the air is born on the ground

☆ Before a spark plug fires, a propeller blade turns or a wing lifts skyward, confidence must be born—on the ground. For no longer is flying a game of chance for the recklessly brave. Chief asset in the swift progress of American aviation has been the confidence inspired by the never ceasing improvement of such vital flying necessities as Scintilla builds.

This confidence stems from the *proved* ability of each part on a plane to do its duty perfectly. We believe that it is the thoroughly satisfactory experience with Bendix-Scintilla Aircraft Magnetos and Spark Plugs that is responsible for the universal confidence in these ignition products.

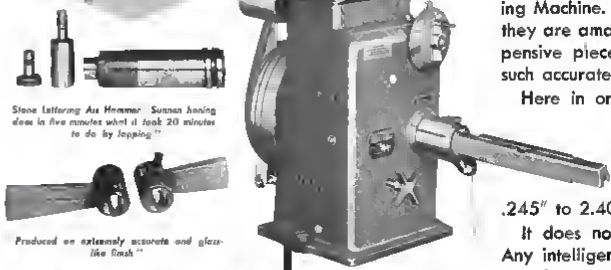
SUNNEN *Precision* HONING MACHINE
Provides a New Solution to the Problem of
Accurately Finishing Internal Cylindrical Surfaces!

A Few Typical Uses



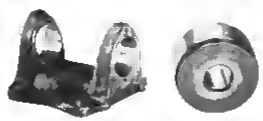
Stone Lettering Ax Hammer "Sunnen honing does in five minutes what it took 20 minutes to do by lapping."

Produced an extremely accurate and glass-like finish."

Miniature Model Airplane Cylinders "Eliminates an extensive machine set-up."

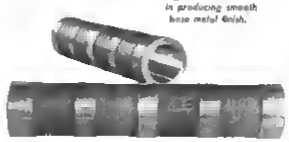
Drill Jig Bushing "Increases sales appeal of product."

Diesel Engine Fuel Injector Cylinder "So accurate that a piston can be fit within .00025 in."



Strict alignment maintained between two holes.

Drawing and Blanking Die "Saves time in producing smooth base metal finish."



A perfectly straight round hole with a mirror finish.

☆ Manufacturers—particularly those engaged in the defense program—are welcoming the Sunnen Precision Honing Machine. Many of them have said that they are amazed to find that such an inexpensive piece of equipment can produce such accurate work.

Here in one simple, practical, inexpensive machine is the answer to the problem of accurately sizing and finishing internal cylindrical surfaces from .245" to 2.400" in diameter.

It does not require a skilled machinist! Any intelligent workman with a few hours practice can produce a super-smooth surface finish and hold accuracy to one ten-thousandth.

The Sunnen Precision Honing Machine can be set up and work located in less than one minute. Three point design of the mandrel using one cutting stone is guaranteed to correct taper and out-of-round holes.

It is ideally suited for assembly operations, production, tool room and experimental use, repair and salvage work and maintenance operation.

Hundreds of manufacturers of such parts as gauges, drill jig bushings, bearing races, automatic machinery, hydraulic cylinders, gears, valves, gyroscopes, instruments, pump parts, etc., are using this Precision Hone to their advantage.

IF A VALVE CAP WERE *BIG as a HOUSE..*

you could make a tour of inspection through this giant cap and see the many unique construction features But size could add nothing to its importance as a tire valve seal

The dirt and muck that accumulate on a wheel are extremely abrasive and destructive to wearing or seating parts A sealing cap is therefore essential to keep this dirt and grit *out* of the valve and to prevent possible loss of tire air *through* the valve

NOTE TO TIRE SERVICE MEN

Seal every tire valve with an air-tight cap This essential safety measure helps to maintain balanced tire pressures for safer take-offs and landings

Why Schrader Valve Caps Are Air tight Up to 250 lbs Pressure

1 *Valve Cap body or shell*

2 *Brass Swivel Plate allows Cap Shell to turn independently of rubber washer as Cap is applied This assures proper seating of washer and prevents distortion*

3 *Brass Dome Shaped Plate provides an indestructible chamber for tail clearance of valve core pin*

4 *Molded Rubber Washer seals valve mouth when Cap is screwed on firmly by hand, while rubber between brass plates 2 and 3 provides spring action to maintain positive seal.*

What's Your Control Job...?

★ Before you went very far on your latest contract defense or otherwise — you were confronted with a CONTROL PROBLEM. It's one you never met before. It STOPS you perhaps for a day or a week — even months until solved.

RELAYS by GUARDIAN

Many extraordinary control problems are quite familiar to GUARDIAN engineers and even things that have never been done before often yield surprisingly quick to the experience of Guardian engineers. Usually a combination of our stock items (more than 7,000) economically assembled into a control unit, relay, solenoid or automatic switch will turn the trick for you.

Series EK—16 Relay. Built to minimum tolerances and the most exacting requirements in production quantities for the U. S. Signal Corps.

Is Yours a Specific Control Problem?

Guardian offers a specific solution. Send sketch or blue prints if available. Consultation, analyses and recommendations of Guardian's engineering staff are yours to command without cost or obligation.

GUARDIAN ELECTRIC

1614 West Walnut Street — Chicago, Illinois

Works Like Dynamite!

...But A Safe Cleaner For Aluminum

Effective coil tank stripper for cleaning piston and connecting rod parts may be made from regular Gunk Concentrate P-16 (Phenolic Type) and relatively low cost chlorinated and isopropyl thinner type solvent diluents.

Chemical laboratory formula bulletins telling you how to make it and where to obtain the special solvent diluents at low costs are available without charge to Gunk users.

Gunk Concentrate diluted with 35 parts of kerosene or similar petroleum diluent makes an especially effective degreasing solvent which will leave engine and engine nacelle "factory clean" at engine check time.

A special solvent stripper for removing carbon exhaust smut from Alclad skin is also available. All are safe cleaners for aluminum.

The CURRAN CORP. MALDEN — HEADQUARTERS for HELP INDUSTRY FIND SAFETY SOLVENTS — MFG. CHEMISTS MASS.

The Light Plane Industry Asked for It

and HERE IT IS!

It's true that we have for years been supplying aircraft batteries to most of the leading builders, but the New Reading Types 324LD and 333LD *were designed from the ground up* for light airplanes. Interested cooperation from both plane and engine technicians plus our broad experience are evident in this radically new battery. It's packed with power yet carries not an ounce of excess weight and is top quality throughout.

PROVED IN OUR OWN FLYING LABORATORY

It has been checked and rechecked for starting, radio and instruments . . . Glad to assist in any experimental work without fee or obligation—write us today.

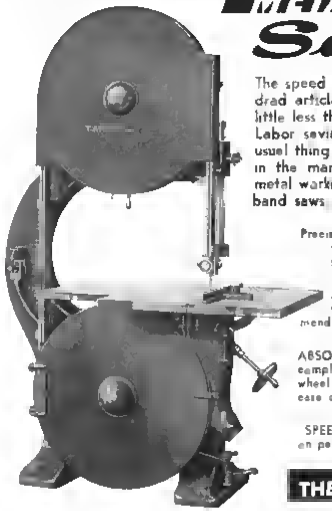
TANNEWITZ HIGH-SPEED METAL-CUTTING BAND SAWS

Save up to 90%!



The speed with which these machines cut sheet steel up to 1/4" thick, tubing and kindred articles with perfect safety, and the smooth character of the work they do is little less than amazing to those who witness it for the first time. (See chart below.) Labor savings ranging from 25% to 90% over other methods of cutting are the usual thing and one of the reasons these highly developed machines are widely used in the manufacture of automobiles, airplanes and products of hundreds of other metal working plants. For complete details simply write for bulletin on metal cutting band saws.

- Precision built with many patented features essential to successful high speed operation
- Saw blade travel of more than two miles per minute gives tremendous sawing capacity
- ABSOLUTELY SAFE—Both wheels are completely guarded. Synchronized two wheel hydraulic brake—automatic in case of saw breakage
- SPEED! CHANGE true running tires on perfectly balanced wheels

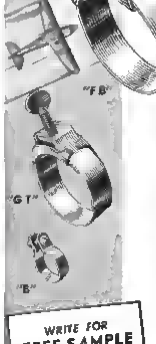
WITTEK

STAINLESS STEEL HOSE CLAMPS FOR AIRCRAFT



Dependable—Proved by use in service. Wittek Hose Clamps are the standard equipment clamp of commercial and military Aircraft Manufacturers and the standard replacement clamp of the Industry. The quick tightening thumbscrew provides a balanced two side pull assuring a safe leakproof connection under all conditions.

Wittek's new plant addition is equipped with a new research and test department and is adapted for increased production to the exacting standards of the Aircraft industry.

TYPE 'FB'—A modern design for modern Aircraft is a solid band stainless steel hose clamp which combines light weight with greater strength and provides the most practical hose clamp for aircraft use.

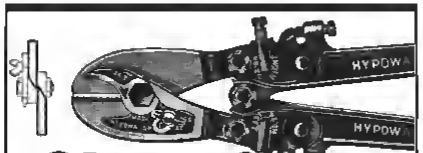
WITTEK MFG. CO. • 4306 W. 24th PL., CHICAGO



ShearCutter

Cable 5/8" Bore 1 1/2" x 9/32"

Here is a tool of very wide use but developed specifically to meet the requirements of aviation. Cuts wire rope, strip or flat bar stock. The blades pass each other in true shearing manner and cut with surprising ease without crushing and with very little deformation. A quick action powerful tool — Size 36T will cut soft wire rope up to 5/8" diameter and soft bar stock 1½" x 9/32". Made in three sizes. Invaluable for maintenance wreckage clearance, guy wire cutting, etc. This is just one model in the complete line of . . .

The toggle joint lever principle tremendously multiplies hand power, and this design plus minimum friction precision parts enables Porter Tools to give long heavy-duty service with maximum ease. Cutting jaws are of selected tool steel drop forged and scientifically heat treated.

PORTER CUTTERS

Write for catalog of bolt clippers, chain cutters, rail splitters and other Porter Tools. Fully illustrated with work and model pictures and valuable information about time saving through proper tool selection.

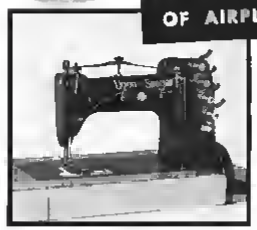
EVERETT, MASS.

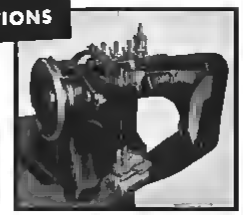
Use these latest "TIME-SAVERS"

FOR PLAIN SEAMING OF AIRPLANE FABRICS



STYLE 51400 PZ • Maker approved 2 needle seam Type 401-LSe2 • Available with ¼" (standard) or ⅜" space between needles • Fitted with special tumbler type presser foot to assure perfectly flat seams • Takes thread directly from cone or spool no stopping for bobbins • Can be supplied with auxiliary roller

FOR CLOSING TUBULAR SECTIONS



STYLE 35700 JZ • Work feeds off of cylinder type arm so that tubular sections can be closed rapidly without stopping to remove finished work from arm • Seam Type 401-LSe 2 • No bobbins to wind • Special tumbler type presser foot • High speed operation

HERE ARE THE ADVANTAGES YOU GET WITH MODERN UNION SPECIAL MACHINES:

1 NO SHUTTLES, NO BOBBINS TO WIND. The Union Special Type 401 Double Locked stitch is made with two ends of thread, both drawn directly from spool or cone. No running out of thread unexpectedly in the middle of a seam. This stitch also produces considerably stronger seams due to an exclusive self-adjusting action that distributes stresses over more threads and leaves threads locked even when adjacent stitches are cut or otherwise damaged.

2 MODERN ENCLOSED SEWING HEADS. All latest features. Built up to the most advanced standards for speed. Easy, dependable lubrication. Low maintenance.

3 COMPLETE UNITS. Union Special offers complete units built on compact, portable power tables ready to go to work in your plant. Or new sewing heads can be supplied to fit your tables.

4 NATIONWIDE SERVICE. Specially trained factory representatives located at 31 different points in United States. For detailed information, write UNION SPECIAL MACHINE CO., 406 N. Franklin St., Chicago, Ill.

Black & Decker's New VACKAR Cleaner

Picks up Rivets, Metal Chips, Dirt—Faster, Better

BLACK & DECKER'S new No. 95 VACKAR is super-powered for fast vacuum cleaning of aircraft assemblies and aircraft plants. Picks up waste rivets, metal chips, dirt and dust from wing panels, tail sections, fuselages, around motors and other aircraft parts. Cleans shop floor, walls, ceilings, bins. Has both powerful suction and blowing action. VACKAR is a self-contained Unit, mounted on ball-bearing swivel casters, and easily tows by the hose. Built with the famous Black & Decker quality you always expect. VACKAR is complete with set of various nozzle attachments. Phone your jobber to demonstrate this powerful Black & Decker VACKAR Cleaner right in your own plant, or write The Black & Decker Mfg. Co., 738 Penna. Ave., Towson, Maryland.

"ELECTRIC TOOL HEADQUARTERS"

Hub Attaching Nuts by AMPCO!

Here again *Ampco Metal* engineers cooperate with a great aircraft equipment manufacturer to produce an outstanding product.

The propeller hub attaching nut in the Curtiss Electric Propeller is Ampco-made—selected because this sturdy aluminum bronze has high tensile strength and marked wear-resistance. This small light section withstands a 2,000 ft. lb. torque without undue deformation or any indication of siezing. There's no "*metal failure*" when *Ampco* is used.

For Highly Stressed Parts

Ampco Metal is a favorite of aviation manufacturers for highly strassed parts. It stands the punishment of hard service in controllable pitch propellers, high speed aviation engines, retractable landing gears, and other important aircraft parts. You'll find it used for trunion screw nuts and bushings, strut bearings, propeller attaching nuts, valve guides, sleeves, bearing liners, and a host of other parts.

When you need a metal to withstand highly stressed conditions, *Ampco Metal* is worth your consideration. *Ampco* Engineers are familiar with aircraft needs and can work with you intelligently. Tell us your metal problems, and we'll send full data.

BLACKHAWK

OFFERS PRODUCTION AND MAINTENANCE EQUIPMENT GEARED TO AVIATION'S EMERGENCY NEEDS OF TODAY!

AVIATION WRENCHES . . .
Special design for aeronautical work. Exclusive Hexite Steel (over 50% stronger than Chrome Vanadium) makes Blackhawk Socket and Open End Wrenches lighter, more compact — yet more economical and durable. Something new you should know about.

AVIATION HYDRAULIC JACKS
Blackhawk Hand Jacks, Gauge-Equipped Jacks, Wheeled Floor Jacks and remotely controlled Units are adding speed and safety to aviation production and maintenance. Capacity — 1 to 75 tons.

HYDRAULIC PIPE BENDERS . . .
Portable for "on the job" work — to speed up bending rigid conduit and pipe (up to 4" dia.) in plant change-overs and construction.

PORTO-POWER MAINTENANCE EQUIPMENT . . .
Powerful hydraulic rams — 2 to 50 tons capacity—operate in all directions with fast, safe remote control. Portable, cut maintenance and production time by speeding up lifting and moving machinery, pressing on or removing gears and pulleys, testing, separating heavy dies and 1001 other uses.

KEEP IT CLEAN with **PUROLATOR** *—a vital consideration throughout the aviation industry!*

IN THE 'PLANE

One important Purolator development is a thoroughly dependable filter for the hydraulic system now installed in practically all of the planes using retractable landing gear, wing flaps and the various mechanisms used in the armament of Army and Navy fighters. The G 1593 Purolator illustrated will handle 12 g.p.m. of 100 SSU oil at 100°F with a maximum of 12# pressure drop. Operating pressures are up to 1500# and the weight of this unit is one pound four ounces.

IN THE PLANT

Purolator lube oil filters are now widely used to guard against the dangers of dirty oil to block tests of everything engines. Purolator meets the problem with the experience gained in producing a great majority of the filter equipment used on gasoline and Diesel engines of all kinds.

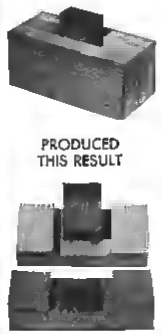
WELDWOOD PLASTIC RESIN WATERPROOF GLUE

Accepted by CIVIL AERONAUTICS ADMINISTRATION when properly applied



SHEAR TEST—Three identical specimens of four different combinations of wood were tested to form illustrated in the upper left photo. (Spruce glued to Mahogany, Spruce to Spruce, Mahogany to Mahogany and Pine to Mahogany). In each case the wood was glued so that their grains were parallel to the lines of force. Hydrostatic pressures operated through two inches of glue line to each specimen.

RESULTS—Hydrostatic pressure loads ranging from 1400 to 2300 pounds produced wood failure in all specimens. In no case was a glue line failure encountered. In all tests the average shear stress values obtained were considerably greater (psi) than the allowable shear stress as specified by ANC-5.

½-cycle wet test comprising alternate submersion and drying of specimens with hydrostatic pressure applied to wet specimens, likewise resulted in 100% wood failure at comparable pressures.

Sample of WELDWOOD WATERPROOF GLUE, the original one-part PLASTIC adhesive, test reports and process specification are available on request. Please apply on firm letterhead.

STANDARD THE WORLD OVER

The "ELECTRIC PONY EXPRESS" will SPEED UP . . . SAFELY

RAW STOCK & FINISHED PARTS movement in your factory at an Unbelievably LOW COST

A storage-battery truck designed by a manufacturer of metal airplane parts, with complete knowledge of the needs of plane production. A phenomenally lightweight, low cost hurdee bearer (not a lift). Strong—fast—no fumes—no grease. Large platforms only 16" from ground for easy loading. Will carry bar stock, long tubing, etc. Always under instant control; runs forward or backward, same speed. Tests show it beats hand trucking 505%. Used by many leading aircraft makers

• *WRITE OR WIRE for complete details on the "Electric Pony Express" and figure your savings!*

Build Or Enlarge Your HANGARS IN A HURRY!

Yes—a hangar taller measured for your specific needs can save you 30% to 40% in original cost. In erection time in maintenance. Working with seven basic units Butler can tailor measure any type of airline shelter from a small T-shape hangar for a private plane owner to a building with 160 foot clear span for a transcontinental line. Can be put up with the labor available—and taken down relocated and re-erected if needed with virtually 100% salvage. Write and outline your building needs—let us tell you how we can fill them at low cost!

ACCEPTANCE!

The increased demand for SENSENICH propellers by the industry has resulted in the completion of another addition to our already modern plant.

Among those recognizing SENSENICH superiority are leading manufacturers of America's most popular planes.

AERONCA, BELLANCA, ERCOUPE, FAIRCHILD, FUNCK, LUSCOMBE, PIPER, RYAN, REARWIN, STINSON, TAYLORCRAFT

SENSENICH propellers are also being used on Army Primary Training planes

SENSENICH BROTHERS

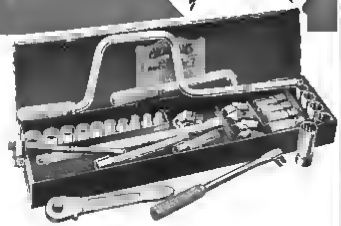
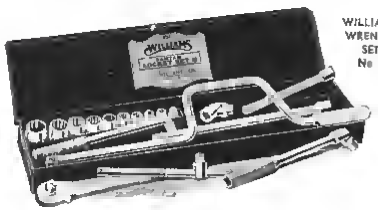
NEW TOOLS FOR NEW NEEDS



WILLIAMS WRENCH SET No. 7

HERE are 3 new sets of socket wrenches engineered specifically for speed and precision in aviation work. Each one of their parts does a specialized job—all function together like a hand-picked crew. Not a dead head in the lot of them. Put them to work and they'll prove it with speeded up assembly records.



WILLIAMS WRENCH SET No. 6

CONTENTS	SET No. 7	SET No. 6	SET No. 5
	(Number of sockets and range of openings)		
¾" sq. drive "Supersockets" Thin Wall		8 15/16 to 1 5/16"	7 15/16 to 1 5/16"
Regular 12 point	8 1/4" to 1 5/16"		
Universal 12 point	3 7/16 to 1 5/16"		
Extra deep 12 point	6 7/16 to 1 5/16"	ALL 3 SETS PACKED IN STURDY STEEL CASE	
Extra deep K-point	4 7/16 to 1 5/16"		
Regular 6 point	2 1 3/4"	1 1 3/4"	

Parts — All sets contain a Reversible Supervatchet speeder universal joint and one each of sliding T bar and offset handles. Sets No. 7 and No. 6 have 3 extension bars. Set No. 5 has 2.

AIRPLANE MAINTENANCE

By HUBERT G. LESLEY

Maintenance Engineer, Eastern Air Lines

Here is one of aviation's most vital and complex subjects, presented in student terminology, stage by stage—by an author of unquestioned ability. Hubert G. Lesley, as maintenance engineer for Eastern Air Lines, has studied and successfully solved the numerous maintenance problems of leading aircraft and accessories manufacturers, of scheduled airline operators and private pilots. What he has explained in such explicit detail are exactly the maintenance problems with which every mechanic is faced, to which every student mechanic must know the answer; which every training school must make certain its students understand.

ON APPROVAL COUPON

CAMBRIDGE

AERO-MIXTURE INDICATOR

4-engine indicator on TWA Stratoliner

ESSENTIAL TO *OPTIMUM PERFORMANCE, CRUISING RADIUS and SAFETY*

On single or multi-engine ship . . . military or commercial . . . the Cambridge Aero Mixture Indicator makes possible

(a) Ability to obtain best performance of engines under any given set of conditions.
(b) Maximum economy in gas consumption
(c) Economy in gas permits an increase in any load since a smaller fuel supply is required
(d) Safety factor in event of emergency when fuel supply is low, the instrument enabling the pilot to fly the maximum length of time with the remaining fuel
(e) Protection against the possibility of damage to engine which might be caused by operating with too lean a mixture

YOUNG MEN WANTED

Must Have Experience

Start YOUR Training TODAY

Select a Course from the Five Listed Below:

2 Months' Aircraft Welding • 3 Months' Aircraft Sheet Metal

6 Months' (Government Approved) Airplane Mechanic's

8 Months' (Government Approved) Engine Mechanic's

1 Year (Government Approved) Master Mechanic's

NEXT CLASS STARTS APRIL 1, 1941

LUSCOMBE GRADUATES will be found wherever airplanes are built, serviced or sealed

LUSCOMBE SCHOOL OF AERONAUTICS

Will Prepare You for Responsible Positions in Aviation . . .

At Luscombe you will receive the sound practical EXPERIENCE to be gained in a school associated for years with a manufacturing plant producing modern metal airplanes of advanced design and construction.

It is no coincidence that has placed so many Luscombe graduates in positions of responsibility. It is the result of thorough training dictated by an intimate knowledge of the exacting requirements of the aircraft industry. If your goal is a POSITION in Aviation rather than a job, it will pay you to investigate Luscombe Training.

GEARED TO THE NEEDS OF THE INDUSTRY

AVIATION NEEDS TECHNICIANS

• Six months intensive training at C.S.A.I. prepares you for high salaried position as Master Aircraft Instrument Technician. Airlines, airplane and instrument manufacturers, Army and Navy (Civil Service) need trained technicians now.

COUNTRY'S LEADING SCHOOL

Complete course includes instrument history, flight theory, Calibration, actual shop practice on every kind of aircraft instrument. Course is based on service requirements of biggest Airline organization. Instructors include aviation's outstanding experts on instrument design, use and maintenance.

LOCATED IN HEART OF AVIATION ACTIVITY

C.S.A.I. is located in Chicago's Municipal Airport. Practical training on all types and sizes of planes included in course. Day and night courses being formed now. Write Dept. A-1 for descriptive catalog.

Chicago School of

AIRCRAFT INSTRUMENTS
Municipal Airport, Chicago, Illinois

RISING SUN SCHOOL OF AERONAUTICS

U. S. Govt. Approved and Licensed

Graduates with Leading Airlines and Factories. Enroll now for next class. Day or Evening.

Now . . INSTRUMENT MEN NEEDED *More Than Ever*

LOOK at the multitude of instruments in today's planes. THINK of how much aircraft operation depends on instruments. CONSIDER the tremendous number of planes now being built—and to be built—for airlines, private flying, and military use. No wonder the instrument technician is IN DEMAND.

American School of Aircraft Instruments offers you training with the highest possible recognition—under CAA approved instructors in a school rated as a CAA approved instrument repair station. Sperry gyroscopic instrument training included. Four courses—one all home study. Send coupon NOW.

AMERICAN SCHOOL OF AIRCRAFT INSTRUMENTS
Dept. A 2300 SAN FERNANDO at GLENDALE Los Angeles, CALIF.

Please send catalog describing your training and opportunities for instrument technicians.

Make it Count!

Put All Plane Production Under Closest Control with

Veeder-Root Counting Devices

Machines and processes in plane production can be made to keep their own work-records in terms of revolutions strokes-speeds, pieces, volumes, lengths, starts, stops, light flashes, hand-movements, or what have you? Veeder-Root Counters will supply these records accurately and unfailingly records that point out any chances for closer control of production scheduling and costs. Easy and inexpensive to install. Write for Catalog G-40

USE HARTZELL PROPELLERS

Unsurpassed engineering precision makes every Hartzell propeller one which contributes the maximum to the ship on which it is installed. Propellers bearing this trade-mark are known to be accurately built. This, in itself, insures dependability in a propeller.

CORRESPONDENCE INVITED

HARTZELL PROPELLER CO.

PIQUA OHIO, U.S.A.

To perfect a "design for living" in safety and comfort at ever higher flight levels is one of the major undertakings at Airesearch. This has called for pioneering in the development and manufacture of cabin pressure control systems for military and commercial airplanes. Typical of Airesearch leadership in pressurized cabin equipment is the fully automatic cabin pressure regulating valve for which U. S. Patent No. 2208554 has been issued. Correspondence and engineering consultation are invited.

AIRESEARCH MANUFACTURING CO.

Also manufacturing a complete line of Engine Oil Coolers, Intercoolers and Pressure Radiators

YOUR COUNTRY needs AIRPLANE DRAFTSMEN!

New I. C. S. Course, Studied in Spare Time, Prepares YOU for SUCCESS in This Growing Field!

TODAY, America is air minded! Probably no industry offers greater opportunities to the *trained man* than aviation. New airplane designs are the order of the day. Millions are being spent for both military and non-military airplanes.

To produce the drawings for these new airplanes, thousands of draftsmen and engineers are required. Every airplane company now needs a large force of *trained draftsmen*. And because the aviation industry is expanding so rapidly, unusual opportunities for rapid advancement exist — *for the trained man only!*

How YOU Can Get Training—Now!

To enable you to prepare yourself for success in this branch of aviation, the International Correspondence Schools (whose graduates include the president of a major airline and hundreds of other successful aviation men) now offer a newly prepared course in Airplane Drafting.

This course not only gives basic training in "math," mechanics, strength of materials and drafting needed by the successful draftsman — but also instruction in subjects of particular value in drafting rooms where airplanes are designed. Students are familiarized with airplanes and their parts. Aviation terms are clearly defined. Illustrations are numerous and easily understood.

Study in Your Own Home

I. C. S. students study at home — don't need to give up their present jobs. No "classroom slow pokes" hold you back. *And the cost of sound, modern I. C. S. training is surprisingly low!*

This coupon, *mailed today*, will bring you a FREE BOOKLET — "AVIATION OPPORTUNITIES" — and complete information without obligation. Do it now!

Like a ruler in the sky . . .

KOLLSMAN SENSITIVE ALTIMETER

The extreme accuracy of the Kollsman Sensitive Altimeter, which permits five-foot readings at any altitude, enables a pilot to maintain an accurately determined level course and to fly confidently above all obstructions.

When equipped with a full-range temperature compensation, it furnishes a reading not affected by temperature extremes, and accurately indicates the barometric altitude above any given reference level.

This most famous of all Kollsman Precision Instruments was the first *sensitive* altimeter made, the *first* instrument to bear the Kollsman name; and today, improved by many years of research, it is acknowledged in aviation circles the world over as unsurpassed in accuracy, reliability and ruggedness.

DOWMETAL MAGNESIUM

EXTRUDED TO MEET MANY NEEDS

A wide variety of extruded shapes in both standard and special sections are available to manufacturers who wish to take advantage of the extraordinary lightness, strength and durability of DOWMETAL* Fabrication of these Dow Magnesium Alloys now includes all methods commonly practiced

DOWMETAL contains from 85 to 99 per cent magnesium

its average specific gravity is only 1.80—a third lighter than any other structural metal in common use

DOWMETAL has excellent engineering qualities The material can be heated to the proper temperature (500-700° F.) for bending and forming without injury to the metal or loss of strength Extruded shapes are normally shipped with Chrome-Pickle finish

Technical information is always available on request

Quality non-ferrous castings for *Eclipse* QUALITY PRODUCTS

FROM the raw material to the finished product the quality of Eclipse Aircraft Accessory Equipment is under the closest supervision.

A new and modern Eclipse Foundry housing the finest of production equipment, under the scientific and technical control of an experienced metallurgical and chemical department, assures a constant supply of quality sand castings to meet the ever increasing demand for Eclipse Aircraft Accessory Equipment.

More than ten years' experience in the manufacture of quality sand castings for aeronautical and industrial requirements provides a background of proven dependability for Eclipse castings.

This expansion in foundry facilities is only one of the many steps which have been taken to meet the increased production requirements occasioned by the National Defense Program.
